subdivisions will be controlled by a swing gate and gate access will only be granted to residents of both subdivisions with clicker-access and Village emergency service vehicles. The swing gate will be improved with an Opticom system that will give Village emergency service vehicles access similar to the systems on streetlights. The Developer agrees to accept title to a sixty-six (66.00) foot by two hundred twenty-five (225.00) foot portion of Lawn Avenue (the "ROW Parcel") that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development; and

WHEREAS, based on the Application submitted by the Applicant, the Village conducted a public hearing relative to certain zoning relief requested by the Applicant in order to construct the Development, pursuant to prior notice, postings and newspaper publication as required by the applicable provisions of State law, including the Illinois Open Meetings Act, 5 ILCS 120/ and Division 11-13 of the Illinois Municipal Code (65 ILCS 5/ 11-13), and the applicable provisions of the DCO (the "Public Hearing"). The Public Hearing was conducted by the Village Plan Commission and commenced on August 13, 2024 and concluded November 18, 2024. The Village Plan Commission issued Recommendation No. PC-2024-02 on November 18, 2024 that favorably recommended approval of the zoning relief contained in the Application, including a Comprehensive Plan Amendment to the Long-Range Land Use Map, a Map Amendment (Rezoning of the Property from the O – Limited Office Zoning District to the R4 - Multiple-Family Residence District), a Conditional Use for a Planned Development, and Exceptions / Variations to the Village Development Control Ordinance ("DCO"), and a Subdivision approval for the construction, operation, and maintenance of a Townhome Subdivision Development referred to as "Heritage Crossing", and a single stage Final Plan review and approval process (i.e., a combined Preliminary Plan / Final Plan approval) for the Development per Subsection 10-8-8(C) of the DCO, provided that the Applicant complies with the submittal and plan review requirements of Section 10-8-5(C) (Final Plan) of the DCO, subject to certain stated conditions of approval (the "Development Zoning Relief"). A copy of Plan Commission Recommendation No. 24-02 is incorporated herein by reference and is on file with the Community Development Department; and

WHEREAS, after completion of the required public hearing before the Village Plan Commission, on **_____, 2025, with the passage of Ordinance No. 25-_____,** the President and Board of Trustees of the Village of Western Springs ("Corporate Authorities") granted approval of the Development Zoning Relief (the "Approval Ordinance"); and

WHEREAS, pursuant to Subsection 10-10-3(F) (Procedures And Requirements For Subdivision Approval; Final Plat) of the DCO and Section 11-15-1 of the Illinois Municipal Code (65 ILCS 5/11-15-1) (Approval of Maps and Plats; Prerequisite to Recording), the Applicant is not allowed to subdivide or develop the Property until a final plat (excluding an administratively approved plat of consolidation) has been reviewed by the Western Springs Plan Commission ("Plan Commission") for its compliance with the applicable DCO provisions, subject to the Village Board approved variations, and has been reviewed and approved by the Village Board; and

WHEREAS, as part of the Village-approved single stage Final Plan review and approval process (i.e., a combined Preliminary Plan / Final Plan approval) for the Project per Subsection 10-8-8(C) of the DCO, the Applicant filed with the Village a "Final Plat of Heritage Crossing Resubdivision", that was prepared by DesignTek Engineering, Inc. with a latest revision date of **December 9, 2024** ("Plat"), for Village review and approval in accordance with the applicable provisions of the DCO. The Plat has been

reviewed and revised as part of the Village plan review process. A copy of the Plat is attached hereto as **Exhibit "A"** and made a part hereof; and

WHEREAS, at open public meetings held on **January 9, 2025 and January 16, 2025,** the Village's Planning and Zoning Committee ("Committee") reviewed the Plat and Plan Commission Recommendation No. 24-02 and received input from the Village staff and provided an opportunity for public input on the Plat. At its January 16, 2025 meeting, the Committee voted to recommend that the Village Board consider the Plat; and

WHEREAS, at open public meetings held on January 13, 2025, January 27, 2025 and February 10, 2025, the Village Board discussed the Plat and Plan Commission Recommendation No. 24-02 and the Committee's recommendation, and received input from the Village staff and provided an opportunity for public input on the Plat. At the **_____, 2025** public meeting, the Village Board considered the findings and recommendations of the Plan Commission and the Committee, the input from the Village staff and the public, and agreed to **approve / deny** the Plat; and

WHEREAS, in accordance with the authority set forth in the applicable provisions of the DCO and the applicable provisions of the Illinois Municipal Code (65 ILCS 5/), including 65 ILCS 5/11-15-1, and the contracting powers set forth at Article VII (Local Government), Section 7 (Counties And Municipalities Other Than Home Rule Units) of the Constitution of the State of Illinois of 1970, the Village President and Board of Trustees of the Village of Western Springs find that the **approval / denial** of this Ordinance and the Plat is protective of the health, welfare and safety of and in the best interests of the Village, its residents, property owners, local businesses and the general public.

BE IT ORDAINED BY THE VILLAGE PRESIDENT AND BOARD OF TRUSTEES OF THE VILLAGE OF WESTERN SPRINGS, COOK COUNTY, ILLINOIS, AS FOLLOWS:

SECTION 1: Incorporation. Each Whereas paragraph above is incorporated by reference into this Section 1 and made a part hereof as material and operative provisions of this Ordinance.

SECTION 2: Approval and Execution of Plat. The Village President and Board of Trustees of the Village of Western Springs approve and authorize the execution of the attached "Final Plat of Heritage Crossing Resubdivision" that was prepared by **DesignTek Engineering, Inc. with a latest revision date of December 9, 2024** ("Plat"), a copy of which is attached hereto as **Exhibit "A"**. The Village Board further authorizes and directs the Village President, the Village Clerk, the Village Plan Commission Chairperson, the Village Treasurer, the Village Engineer and the Village Attorney, or their designees, and any other Village officials, as needed, to execute the final version of the Plat, which may contain certain non-substantive and non-financial modifications that are approved by the Village Attorney, and such other documents as are necessary to fulfill the Village's obligations under this Ordinance.

SECTION 3: Delivery of Executed Plat for Filing With the Cook County Clerk's Office, Recording Division. After approval of this Ordinance, certified copies of this Ordinance and a fully executed original of the attached Plat shall be filed by the Village, at the Applicant's cost, with the Cook County Clerk's Office, Recording Division. Thereafter, the Village shall provide the Applicant with Cook County Clerk's Office, Recording Division filed-stamped copies of this Ordinance and the Plat for purposes of record retention and compliance with the terms of this Ordinance.

SECTION 4: Repealer; Severability. Any ordinance, or portion thereof, in conflict with this Ordinance is repealed to the extent of such conflict, and the text of this Ordinance shall control and govern**.** Each Section, paragraph, clause and provision of this Ordinance is separable, and if any such Section, paragraph, clause or provision is held unconstitutional or invalid for any reason, such decision shall not affect the remainder of this Ordinance, nor any portion hereof, other than that part affected by such decision.

SECTION 5: Termination of Ordinance for Failure of Developer to Acquire Title to the Property. This validity of this Ordinance is subject to the Developer purchasing the Property from the Property Owner. In the event the Developer does not purchase the Property from the Property Owner, upon written notice delivered to the Village Manager of the termination of the real estate purchase contract entered into between the Property Owner and the Developer, this Ordinance shall automatically terminate without further action by the Corporate Authorities of the Village and shall be void and unenforceable. If the Developer does not purchase the Property, the Developer agrees to waive all claims, causes of action and damages of any kind that could be filed against the Village arising out of or related to the termination of this Ordinance based on the Developer not purchasing the Property. The Developer is required to provide written notice to the Village within five (5) calendar days of the termination of the real estate purchase contract.

SECTION 6: Effective Date. This Ordinance shall be in full force and effect from and after its passage, approval and publication as provided by State law.

PASSED by the Village President and Board of Trustees of the Village of Western Springs, Cook County, Illinois, on a roll call vote at a **Regular Meeting thereof, held on the ____ day of _____, 2025,** and approved by me as Village President, and attested by the Village Clerk on the same day.

SURFACE WATER STATEMENT

To the best of our knowledge and belief, the drainage of surface waters will not be changed by the construction of this subdivision or any part thereof, or, if such surface water drainage will be changed, reasonable provision has been made for collection and diversion of such surface waters into public areas, or drains which the owner has a right to use, and that such surface waters will be planned for in accordance with generally accepted engineering practices so as to reduce the likelihood of damage to the adjoining property because of the construction of this subdivision.

RESPONSIBILITY OF H.O.A., VILLAGE OF WESTERN SPRINGS AND LAGRANGE HIGHLANDS SANITARY DISTRICT

The Homeowners Association (H.O.A.) shall be responsible for maintenance of all landscaping areas within all Lots and Outlots within the subdivision, together with all improvements within the ingress-egress easement, and all storm sewers and structures. The individual homeowners shall be responsible for all sanitary and water services from the public sanitary service connections and B-Boxes to the constructed buildings. The Village of Western Springs shall be responsible for all watermain and structures attached thereto. The LaGrange Highlands Sanitary District shall maintain the sanitary sewer and all structures attached thereto. The Homeowners Association shall maintain those specified areas and features described above in a manner consistent with the plans approved by the Village of Western Springs (Village) and the standards typical of private property maintenance throughout the community. In the event the Owners fail to properly maintain these areas, the Village shall, upon seventy-two (72) hours prior notice to the H.O.A., have the right, but not the duty, to perform, or have performed on its behalf, any maintenance work to or upon the specified areas and features. In the event of an emergency situation, as determined by the Village, the seventy-two (72) hours prior notice requirement set forth above shall not apply, and the Village shall have the right, but not the duty, to proceed without notice to the H.O.A.

In the event the Village shall perform, or have performed on its behalf, any maintenance work of the specified areas or features, the cost of such work shall, upon recordation of Notice of Lien with the Recorder of Deeds of Cook County, Illinois, constitute a lien against the assets of the property owners and against each and every lot within the subdivision. The cost of the work incurred by the Village shall include all expenses and costs associated with the performance of such work including, but not limited to, reasonable engineering, consulting and attorneys' fees related to the planning and actual performance of the work.

PRIVATE INGRESS - EGRESS PROVISIONS

An easement for ingress and egress over and across the Property for the benefit of the Owner(s) of Subdivision and/or Lots, their heirs, successors, assigns, guests and invitees, as more particularly bounded and described on the Plat. This easement shall be perpetual and shall run with the land.

The Homeowners Association (H.O.A.) shall be responsible for maintenance of all improvements within said ingress and egress areas within the subdivision. The Homeowners Association shall maintain those specified areas and features described above in a manner consistent with the plans approved by the Village of Western Springs (Village) and the standards typical of private property maintenance throughout the community. In the event the Owners fail to properly maintain these areas, the Village shall, upon seventy-two (72) hours prior notice to the H.O.A., have the right, but not the duty, to perform, or have performed on its behalf, any maintenance work to or upon the specified areas and features. In the event of an emergency situation, as determined by the Village, the seventy-two (72) hours prior notice requirement set forth above shall not apply, and the City shall have the right, but not the duty, to proceed without notice to the H.O.A.

In the event the Village shall perform, or have performed on its behalf, any maintenance work of the specified areas or features, the cost of such work shall, upon recordation of Notice of Lien with the Recorder of Deeds of Cook County, Illinois, constitute a lien against the assets of the property owners and against each and every lot within the subdivision. The cost of the work incurred by the Village shall include all expenses and costs associated with the performance of such work including, but not limited to, reasonable engineering, consulting and attorneys' fees related to the planning and actual performance of the work.

STORMWATER MANAGEMENT EASEMENT

Declarant hereby reserves and grants to the Village of Western Springs (Village) easements in, over, under, through, and upon those areas designated on the Plat as 'Stormwater Management Easement,'including but not limited to all outlots (Outlot 30-33 inclusive), and all areas detailed in the Declaration of Covenants Conditions and Restrictions for the Heritage Crossing Townhome Association of Western Springs pertaining to maintenance, repair, and replacement of stormwater management facilities, for purposes of providing adequate stormwater drainage control together with reasonable access thereto. [Continue with the same language currently on the plat in this first paragraph, I don't want to rewrite it all].

In the event the Village shall perform, or have performed on its behalf, removal of any obstruction or alteration to or upon the stormwater facilities drainage easement, as set forth in this easement, The Village shall establish a Special Service Area, pursuant to 35 ILCS 200/27-5 et seq., that includes the entire Premises after the approval of the Planned Development by the Village but prior to the sale and conveyance of title to any Lot to any person by the Developer, which shall govern the Premises for the purpose of ensuring, as and when appropriate, the maintenance, repair and replacement of the SSA Maintained Improvements. The Special Service Area shall be an encumbrance on title to the Premises, including each Lot, Dwelling Unit and Common Areas. The Developer agrees to cooperate with the Village in creating the Special Service Area and agrees not to object to the formation of the Special Service Area, provided the terms of the Special Service Area are consistent with the Development Agreement and this Declaration. In the event the owner of any portion of the Premises (the Developer, the Declarant, the Association, a Dwelling Unit Owner or Owner), at any time, shall fail to maintain, repair or replace the SSA Maintained Improvements, as and when appropriate, and, after receipt of Village notice of such failure and opportunity to cure, the Village shall have the right to levy a special service tax on the parcel(s) where the owner(s) has failed to perform its maintenance, repair or replacement obligations on the Premises, perform such work and receive reimbursement of the costs and expenses it has incurred, including any legal fees and related expenses, engineering fees and related expenses, other consultant fees and related expenses and a reasonable allocation of Village staff and overhead costs. The Village shall not levy a tax in accordance with the Special Service Area unless the applicable owner(s) fails or refuses to fulfill its maintenance, repair and replacement obligations or its reimbursement obligation to the Village, as contained in this Agreement and the Declaration. The tax levy by the Village may extend to one owner or a limited number of owners, and not the entire Premises, if such limited tax levy is appropriate. In the event the failure or refusal to fulfill maintenance, repair and replacement obligations or the reimbursement obligation to the Village relates to one or more components of the SSA Maintained Improvements that support or serve the entire Premises or the Development, then the levy shall extend to the Association and each of the property owners of the Development. The maximum tax established for the Special Service Area shall be based on the actual incurred expenses or, if the improvements have not been made yet, the Village Engineer's reasonable, estimated expense for maintenance, repair or replacement of such improvements. If the Association or a property owner(s) shall fail to pay the Special Service Area Tax, the Village shall be authorized to: (1) take all other legal action and legal remedies to recoup the Village's funds spent on the enforcement of the obligations and shall be entitled to recover its actual incurred legal fees and related expenses from the owner(s) who fails or refuses to fulfill its maintenance, repair and replacement obligations or its reimbursement obligation to the Village; and (2) take all other legal action and legal remedies to recoup the Village's funds spent on the enforcement of the obligations of the Developer hereunder, including such lien foreclosure action authorized by 65 ILCS 5/11-31-1, as amended, or provided for in 65 ILCS 5-11-31-2, as amended, or similar applicable laws to foreclose on the lien and may collect its reasonable attorney's fees and litigation expenses incurred in the enforcement of the obligations.

COMED COMPANY AND AT & T CORPORATION

An easement for serving the subdivision and other property with electric and communication service is hereby reserved for and granted to COMED COMPANY and AT & T CORPORATION, their respective licensees, successors, and assigns, jointly and severally, to construct, operate, repair, maintain, modify, reconstruct, replace, supplement, relocate and remove, from time to time, poles, guys, anchors, wires, cables, conduits, manholes, transformers, pedestals, equipment cabinets or other facilities used in connection with overhead and underground transmission and distribution of electricity, communications, sounds and signals in, over, under, across, along and upon the surface of the property shown within the dashed or dotted lines (or similar designation) on the plat and marked Public Utility & Drainage Easement, or P.U. & D.E." designation), the property designated in the Declaration of Condominium and/or on this plat as 'Common Elements'; and the property designated on the plat as 'common area or areas'; and the property designated on the plat for streets and alleys, whether public or private, together with the rights to install required service connections over or under the surface of each lot and common area or areas to serve improvements thereon, or on adjacent lots, and common area or areas, the right to cut, trim or remove trees, bushes, roots and saplings and to clear obstructions from the surface and subsurface as may be reasonably required incident to the rights herein given, and the right to enter upon the subdivided property for all such purposes. Obstructions shall not be placed over Grantees' facilities or in, upon or over the property within the dashed or dotted lines (or similar designation) marked 'Easement', 'Utility Easement', 'Public Utility Easement', 'P.U.E' (or similar designation) without the prior written consent of Grantees. After installation of any such facilities, the grade of the subdivided property shall not be altered in a manner so as to interfere with the proper operation and maintenance thereof.

The term 'Common Elements' shall have the meaning set forth for such term in the 'Condominium Property Act', Chapter 765 ILCS 605/2, as amended from time to time.

The term 'common area or areas' is defined as a lot, parcel or area of real property, the beneficial use and enjoyment of which is reserved in whole or as an appurtenance to the separately owned lots, parcels or areas within the planned development, even though such be otherwise designated on the plat by terms such as 'outlots', 'common elements', 'open space', 'open area', 'common ground', 'parking' and 'common area'. The term 'common area or areas', and 'Common Elements' include real property surfaced with interior driveways and walkways, but excludes real property physically occupied by a building, Service Business District or structures such as a pool, retention pond or mechanical equipment. Relocation of facilities will be done by Grantees at cost of the Grantor/Lot Owner, upon written request.

NICOR CORPORATION / NICOR GAS COMPANY PROVISIONS

An easement is hereby reserved for and granted to NICOR GAS COMPANY OF ILLINOIS, its successors and assigns, in all platted 'easement'areas, streets, alleys, other public ways and places shown on this plat, said easement to be for the installation, maintenance, relocation, renewal and removal of gas mains and appurtenances for the purpose of serving all areas shown on this plat as well as other property, whether or not contiguous thereto. No buildings or other structures shall be constructed or erected in any such 'easement' areas, streets, alleys, or other public ways or places nor shall any other use be made thereof which will interfere with the easements reserved and granted hereby.

PUBLIC UTILITY AND DRAINAGE EASEMENT PROVISIONS

A non-exclusive perpetual easement is hereby reserved and granted to the Village of Western Springs (Village), LaGrange Highlands Sanitary District and their successors and assigns over all areas designated "Public Utility and Drainage Easement" and those areas designated "P.U. & D.E." on the plat, to construct, reconstruct, repair, inspect, maintain and operate various transmissions, distribution, and collection systems, including but not limited to water lines, sanitary sewers and storm sewers, together with any and all necessary valve vaults fire hydrants, manholes, catch basins, connections, appliances and other structures and appurtenances as may be deemed necessary by said Village, over, upon, along, under and through the surface of the property shown on the plat, together with the right of access for necessary labor, materials and equipment to do any of the above work.

The right is also granted to cut down, trim or remove, without obligation to restore or replace any obstruction, including but not limited to trees, shrubs, other plants, structures or improvements on the easement that interfere with the operation of such lines and sewers. No permanent buildings or structures shall be placed on said easement, but same may be used for gardens, landscape areas, and other purposes that do not then or later interfere with the aforesaid uses or rights. Where an easement is used for both sewer and other utilities, the other utility installation shall be subject to the ordinance of the Village of Western Springs and to Village approval as to design and location.

Perpetual easements are hereby reserved for and granted to the Village of Western Springs and other governmental authorities having jurisdiction of the land, over the entire easement area for ingress, egress, and the performance of municipal and other governmental services including water, storm and sanitary sewer service and maintenance and emergency and routine police, fire, and other public safety related services.

COMCAST COMMUNICATIONS PROVISIONS

An easement is hereby reserved and granted to COMCAST COMMUNICATIONS CORPORATION, operating within the Village of Western Springs, it's successors and assigns, jointly and severally, for the installation, maintenance, relocation, renewal and removal of communication and broadcast signal systems in, under, across, along and upon the surface of the property shown on the plat and designated as "Public Utility and Drainage Easement" or "P.U. & D.E." and the property designated on the plat for streets and alleys as required to provide the planned unit development and other property, whether or not contiguous thereto, with communication and broadcast TV services, together with the right to install required service connections for each lot. No buildings or other obstructions shall be constructed or erected in any such "Public Utility and Drainage Easement" or P.U. & D.E." areas, without the prior written consent of grantees. Nor shall any other use be made thereof which will interfere with the easements reserved and granted hereby.

DATE: _____, 2025.
OTHER: None.

A RESOLUTION AUTHORIZING THE APPROVAL AND EXECUTION OF REDEVELOPMENT AND MAINTENANCE AGREEMENT BY AND BETWEEN THE VILLAGE OF WESTERN SPRINGS, ILLINOIS AND MCNAUGHTON DEVELOPMENT, LLC FOR THE HERITAGE CROSSING RESIDENTIAL TOWNHOME DEVELOPMENT (5600 South Wolf Road, Western Springs, Illinois)

WHEREAS, McNaughton Development, LLC, with its principal business office located at 11S220 Jackson Street, Burr Ridge, Illinois 60527 ("Applicant"), is the contract purchaser and prospective developer of the real property commonly known as 5600 South Wolf Road, Western Springs, Illinois ("Property"). Casey and Fran Gaik (collectively the "Property Owner") are the fee simple title owners of the Property and have submitted a written authorization to the Village of Western Springs ("Village") that allowed the Applicant to file with the Village a completed "General Information Application for Land Use and Development in the Village" form with supporting documents (the "Application") for the redevelopment of the Property as a twenty-nine (29) unit residential townhome development (the "Development"). The Property Owner has further executed a "Written Consent and Waiver" to allow McNaughton Development, LLC to enter into this Agreement, a copy of which is on file with the Community Development Department and is incorporated herein by reference and made a part hereof. The Property is legally described in **Exhibit "A"** attached hereto and made a part hereof; and

WHEREAS, in 2024, the Applicant submitted the Application to the Village requesting approval of a conditional use permit for a planned development, a map amendment, an amendment to the Village's Comprehensive Land Use Plan, a plat of consolidation, a plat of abrogation for storm sewer easement and public utility easement, a plat of right-of-way vacation relating to a sixty-six (66.00) foot by two hundred twenty-five (225.00) foot portion of Lawn Avenue (the "ROW Parcel"), which is utilized as a stormwater detention basin, certain development allowances, exceptions and variations, and other zoning relief as noted below in accordance with the applicable provisions of the Village's Development Control Ordinance ("DCO"), in order to construct the Development, which is commonly referred to as the Heritage Crossing Subdivision or the Heritage Crossing Townhome Development. A copy of the Application is on file with the Village's Community Development Department and is incorporated herein by reference; and

WHEREAS, the proposed Development consists of nine (9) townhome buildings with unit counts of either three-units or four-units. Each dwelling unit will have a balcony, a rear patio, and an attached, front-loaded garage with a driveway accessed by a private street through the Development. The Development will have off-street community parking spaces, possible on street-parking, sidewalks, stormwater detention basins, open space and streetlights. The Applicant proposes to extend private Heritage Court to the southeast through the Property to the Development's access driveway proposed along Wolf Road. The existing portion of Heritage Court, a private road, currently services only the Heritage Springs Townhome Development, connects to 55th Street to the north of the Property and is maintained by the Heritage Springs Homeowners Association. The Applicant's plans indicate that the new portion of Heritage Court will match the existing road's width. An automatic gate will separate the Development from the existing Heritage Springs Subdivision to the north. Vehicle access between the adjacent subdivisions will be controlled by a swing gate and gate access will only be granted to residents of both subdivisions with clicker-access and Village emergency service vehicles. The swing gate will be improved with an Opticom system that will give Village emergency service vehicles access similar to the

systems on streetlights. The Developer agrees to accept title to a sixty-six (66.00) foot by two hundred twenty-five (225.00) foot portion of Lawn Avenue (the "ROW Parcel") that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development; and

WHEREAS, based on the Application submitted by the Applicant, the Village conducted a public hearing relative to certain zoning relief requested by the Applicant in order to construct the Development, pursuant to prior notice, postings and newspaper publication as required by the applicable provisions of State law, including the Illinois Open Meetings Act, 5 ILCS 120/ and Division 11-13 of the Illinois Municipal Code (65 ILCS 5/ 11-13), and the applicable provisions of the DCO (the "Public Hearing"). The Public Hearing was conducted by the Village Plan Commission and commenced on August 13, 2024 and concluded November 18, 2024. The Village Plan Commission issued Recommendation No. PC-2024-02 on November 18, 2024 that favorably recommended approval of the zoning relief contained in the Application, including a Comprehensive Plan Amendment to the Long-Range Land Use Map, a Map Amendment (Rezoning of the Property from the O – Limited Office Zoning District to the R4 - Multiple-Family Residence District), a Conditional Use for a Planned Development, and Exceptions / Variations to the Village Development Control Ordinance ("DCO"), and a Subdivision approval for the construction, operation, and maintenance of a Townhome Subdivision Development referred to as "Heritage Crossing", and a single stage Final Plan review and approval process (i.e., a combined Preliminary Plan / Final Plan approval) for the Development per Subsection 10-8-8(C) of the DCO, provided that the Applicant complies with the submittal and plan review requirements of Section 10-8-5(C) (Final Plan) of the DCO, subject to certain stated conditions of approval (the "Development Zoning Relief"). A copy of Plan Commission Recommendation No. 24-02 is incorporated herein by reference and is on file with the Community Development Department; and

WHEREAS, after completion of the required public hearing before the Village Plan Commission, on _____, 2025 with the passage of **Ordinance No. 25-_____,** the President and Board of Trustees of the Village of Western Springs ("Corporate Authorities") granted approval the Development Zoning Relief; and

WHEREAS, as part of the conditions of approval of the Development contained in **Ordinance No. 25-_____,** it is necessary for the Village and the Developer to approve and enter into the attached "REDEVELOPMENT AND MAINTENANCE AGREEMENT BY AND BETWEEN THE VILLAGE OF WESTERN SPRINGS, ILLINOIS AND MCNAUGHTON DEVELOPMENT, LLC FOR THE HERITAGE CROSSING RESIDENTIAL TOWNHOME DEVELOPMENT (5600 South Wolf Road, Western Springs, Illinois)"(the "Redevelopment Agreement") to provide for the redevelopment of the Property, including the construction of certain public improvements on behalf of the Village as described in the Redevelopment Agreement. A copy of the Redevelopment Agreement is attached hereto as **Exhibit "B"** and made a part hereof; and

WHEREAS, at open public meetings held on January 9, 2025 and January 16, 2025, the Village's Planning and Zoning Committee ("Committee") reviewed and discussed the proposed Heritage Crossing Townhome Development and the related Redevelopment Agreement, and received input from the Village staff on the matter, and provided an opportunity for public input on the matter. At its January 16, 2025 meeting, the Committee recommended that the Corporate Authorities of Village consider the Redevelopment Agreement; and

WHEREAS, at open public meetings held on **January 13, 2025, January 27, 2025 and February 10, 2025**, the Corporate Authorities of Village reviewed and discussed the Committee's recommendation regarding the proposed Heritage Crossing Townhome Development and the related Redevelopment Agreement, and received input from the Village staff on the matter and provided an opportunity for input from the public on the matter. At its _____, **2025 meeting**, the Corporate Authorities of the Village accepted the Committee's recommendation regarding approval of the Redevelopment Agreement; and

WHEREAS, the Corporate Authorities of the Village of Western Springs are authorized, under the applicable provisions of the Illinois Municipal Code (65 ILCS 5/), and the intergovernmental cooperation powers set forth at Article VII (Local Government), Section 7 (Counties And Municipalities Other Than Home Rule Units) and Section 10 (Intergovernmental Cooperation) of the Constitution of the State of Illinois of 1970, to approve and enter into the Redevelopment Agreement, and further find that it is protective of the health, welfare and safety of and in the best interests of the Village, its residents, property owners, local businesses and the public to approve and enter into the Redevelopment Agreement.

BE IT ORDAINED BY THE VILLAGE PRESIDENT AND BOARD OF TRUSTEES OF THE VILLAGE OF WESTERN SPRINGS, COOK COUNTY, ILLINOIS, AS FOLLOWS:

SECTION 1: Incorporation. Each Whereas paragraph above is incorporated by reference into this Section 1 and made a part hereof as material and operative provisions of this Resolution.

SECTION 2: Approval and Execution of Redevelopment Agreement and Other Related Documents. The Village President and Board of Trustees of the Village of Western Springs authorize the approval and execution of the attached Redevelopment Agreement, substantially in the form attached hereto as **Exhibit "B"**, which may contain certain non-substantive and non-financial modifications that are approved by the Village Attorney, and all other instruments and documents that are necessary to fulfill the Village's obligations under the Redevelopment Agreement.

SECTION 3: Delivery of Redevelopment Agreement and Other Documents. After approval and execution of this Resolution and the Redevelopment Agreement by the Village President and Village Clerk, or their designees, the Village Clerk's Office shall arrange for the delivery of certified copies of this Resolution and executed versions of the attached Redevelopment Agreement to the Applicant and the Developer for record retention purposes.

SECTION 4. Termination of Resolution for Failure of Developer to Acquire Title to the Property. This validity of this Resolution is subject to the Developer purchasing the Property from the Property Owner. In the event the Developer does not purchase the Property from the Property Owner, upon written notice delivered to the Village Manager of the termination of the real estate purchase contract entered into between the Property Owner and the Developer, this Resolution shall automatically terminate without further action by the Corporate Authorities of the Village and shall be void and unenforceable. If the Developer does not purchase the Property, the Developer agrees to waive all claims, causes of action and damages of any kind that the Developer could file against the Village arising out of or related to the termination of this Resolution based on the Developer not purchasing the Property. The Developer is required to provide written notice to the Village within five (5) calendar days of the termination of the real estate purchase contract.

SECTION 5: Effective Date. This Resolution shall be in full force and effect from and after its passage and approval as provided by State law.

PASSED by the Village President and Board of Trustees of the Village of Western Springs, Cook County, Illinois, on a roll call vote at a Regular Meeting thereof, held on the ___ day of _____, 2025, and approved by me as Village President, and attested by the Village Clerk on the same day.

REDEVELOPMENT AND MAINTENANCE AGREEMENT BY AND BETWEEN THE VILLAGE OF WESTERN SPRINGS, ILLINOIS AND MCNAUGHTON DEVELOPMENT, LLC FOR THE HERITAGE CROSSING RESIDENTIAL TOWNHOME DEVELOPMENT (5600 South Wolf Road, Western Springs, Illinois)

THIS REDEVELOPMENT AND MAINTENANCE AGREEMENT ("**Agreement**") is dated the ___ day of _____, 2025 ("**Effective Date**"), and is entered into by and between the **VILLAGE OF WESTERN SPRINGS** , an Illinois municipal corporation ("**Village**") and **MCNAUGHTON DEVELOPMENT, LLC**, an Illinois limited liability company, with its principal corporate office located at 11S220 Jackson Street, Suite #101, Burr Ridge, Illinois ("**Applicant**" or "**Developer**"), by and through their respective duly authorized agents and/or representatives. The Village and the Developer are at times referred to below individually as a "**Party**" and collectively as the "**Parties**".

IN CONSIDERATION OF the mutual covenants and promises as contained in this Agreement and other good and valuable consideration, the receipt and sufficiency of which are acknowledged, the Parties agree as follows:

SECTION 1. RECITALS.

The Village, a non-home rule municipality, is a duly constituted and existing municipality within the meaning of Section 1 (Municipalities And Units Of Local Government) and Section 7 (Counties and Municipalities Other Than Home Rule Units) of Article VII (Local Government) of the Constitution of the State of Illinois of 1970.

The Village is authorized, under the provisions of Section 10 (Intergovernmental Cooperation) of Article VII (Local Government) of the State of Illinois Constitution of 1970, to contract and otherwise associate with individuals, associations and corporations in any manner not prohibited by law. The Village has the statutory authority to promote the health, safety and welfare of the Village and its residents, to encourage private development in order to enhance the local tax base, and to enter into contractual agreements with developers and redevelopers to achieve these objectives.

As of May 23, 2024, the Developer is the contract purchaser and prospective developer of the real property commonly known as 5600 South Wolf Road, Western Springs, Illinois ("Property") and has filed a General Information Application for Land Use and Development in the Village with supporting documents (the "Application") for the rezoning and redevelopment of the 5600 South Wolf Road Property. Casey and Fran Gaik (the "Property Owner") are the fee simple title owners of the Property and have submitted a written authorization to the Village that allowed the Applicant to file the Application for the redevelopment of the Property as a twenty-nine (29) unit residential townhome development as described in more detail below (the "Development"). The Property Owner has further executed a "Written Consent and Waiver" to allow McNaughton Development, LLC to enter into this Agreement, a copy of which is attached hereto as **Exhibit "I"** and made a part hereof. The Property is approximately 2.755 acres, which consists of 2.414 acres of 5600 Wollf Road and the adjacent Lawn Avenue right-of-way. The Property Tax Index Numbers for the Property are identified as follows: (1) PIN: 18-18-200-017-0000, (2) PIN: 18-18-200-038-0000 , and (3) PIN: 18-18-200-001-0000 (collectively the "**Property PINs**").

D. The Developer proposes to redevelop the Property with twenty-nine (29) unit residential townhomes consisting of nine (9) townhome buildings with varying unit counts of either three-units or four-units. Each dwelling unit will have a balcony, a rear patio, and an attached, front-loaded garage with driveways accessed by a private street through the Development. The Development will have off-street community parking spaces, on street-parking along the west and south sides of the proposed Heritage Court, sidewalks, an expanded stormwater detention basin system and stormwater management facilities and other private and public infrastructure, open space areas, landscaped areas and private streetlights. The Applicant proposes to extend private Heritage Court to the southeast through the Property to the Development's access driveway proposed along Wolf Road. The existing portion of Heritage Court, a private road, currently services only the Heritage Springs Townhome Development, connects to 55th Street to the north of the Property and is maintained by the Heritage Springs Homeowners Association. An automatic gate will separate the Development from the existing Heritage Springs Subdivision to the north. Vehicle access between the adjacent subdivisions will be controlled by a swing gate, and gate access will only be granted to residents of both subdivisions with clicker-access and Village emergency service vehicles. The swing gate will be improved with an Opticom system that will give Village emergency service vehicles access similar to the systems on streetlights. The Developer agrees to accept title to a sixty-six (66.00) foot by two hundred twenty-five (225.00) foot portion of Lawn Avenue (the "Lawn Avenue ROW Parcel") that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development. A copy of the Site Plan for the Development revised as of January 27, 2025 is attached hereto as **Exhibit "A"** and made a part hereof.

E. The Developer agrees to apply for and use commercially reasonable efforts to secure all required zoning and development permit approvals from the Village and all other permits and approvals from other governmental oversight agencies in order to secure final approvals that allow for the construction and operation of the Development in conformance with the Village-approved Final Development Plans, as amended by any Village-approved zoning relief and development entitlements and any approval conditions and requirements imposed by other governmental oversight agencies. The Developer agrees to actively participate in good faith in all required zoning hearing proceedings and development permit processes and all other permits and approvals from other governmental oversight agencies in order to secure final approvals that allow for the construction and operation of the Development.

F. Based on the Application submitted by the Applicant, the Village conducted a public hearing relative to certain zoning relief requested by the Applicant in order to construct the Development. The public hearing was conducted by the Village Plan Commission and commenced on August 13, 2024 and concluded November 18, 2024. The Village Plan Commission issued Recommendation No. PC-2024-02 on November 18, 2024 that favorably recommended approval of the zoning relief contained in the Application, including a Comprehensive Plan Amendment to the Long-Range Land Use Map, a Map Amendment (Rezoning of the Property from the O – Limited Office Zoning District to the R4 - Multiple-Family Residence District), a Conditional Use for a Planned Development, and Exceptions / Variations to the Village Development Control Ordinance ("DCO"), and a Subdivision approval for the construction, operation and maintenance of a Townhome Subdivision Development referred to as "Heritage Crossing", subject to certain stated conditions of approval (the "Development Zoning Relief").

G. On February 10, 2025, the Corporate Authorities of the Village approved Ordinance No. 25-_____ that granted the Development Zoning Relief and a set of Final Development Plans, subject to final Village Engineer comments and Community Development Department comments and subject to final plan review comments at the time of application for a site development permit or a building permit, for purposes of encouraging the Developer to proceed with the necessary land acquisition, project financing, and other zoning, development or governmental permitting entitlement activities relative to securing final approvals to construct the Development (the "Approval Ordinance"). On February 10, 2025, the Corporate Authorities of the Village also approved Ordinance No. 25-_____, which vacated the Lawn Avenue ROW Parcel and approved a plat of right-of-way vacation and retention of stormwater facility easement for purposes of incorporating the Lawn Avenue ROW Parcel into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the Development. The Corporate Authorities of the Village will not unreasonably deny any requested zoning relief or permits that are consistent with the terms of this Agreement after completion of the required public hearing process or the permitting process.

H. To receive a site development permit or a construction permit for the Development, the Developer is required to submit and obtain the approval of the Corporate Authorities of the Village of a set of Final Development Plans, which shall incorporate and account for the Village-approved zoning relief after the required public hearing(s) are completed, including consideration of any recommendation issued by the advisory Village Plan Commission and public input, the Village plan review comments, the Village Engineer review comments and the Community Development Department review comments, and all required amendments issued by any other governmental authority with jurisdiction over the Development and proof of approval of all necessary development or governmental permits issued by any other governmental authority with jurisdiction over the Development.

I. The Developer intends that all roads, driveways, parking spaces, landscaping, stormwater management facilities and other infrastructure and improvements located within the Property will be privately owned and privately maintained in perpetuity, except only Public Infrastructure as defined in Section 2 of this Agreement.

J. The Developer intends to construct the Development continuously to completion once work on the Development commences.

K. The foregoing Recitals of this Section 1 are material terms and provisions and are incorporated herein and made a part of this Agreement.

SECTION 2. DEFINITIONS.

Whenever used in this Agreement, the following terms have the following meanings unless a different meaning is required by the context:

"Approval Ordinance": Western Springs Ordinance No. 25-_____ approving a Conditional Use Permit for Planned Development for the Construction and Operation of the Development with Conditions. See attached **Exhibit "B"**.

"Approved Plans": See Subsection 4.A. of this Agreement.

"Board of Trustees" or "Corporate Authorities": The President and Trustees of the Village of Western Springs.

"Certificate of Completion": means a certificate, issued by the Village, that confirms (a) the Development has been completed in substantial conformance with the Approval Ordinance and the Village-approved Final Development Plans; or (b) substantial completion of any significant milestone component of the Development (e.g., completion of the Infrastructure or the Stormwater Conveyance System or of a townhome building), as applicable.

Change in Law": Means the occurrence, after the Effective Date, of an event described below in this definition, provided such event materially changes the ability of the Party relying thereon to carry out its obligations under this Agreement and such event is not caused by the Party relying thereon. Change in Law means any of the following: (1) the enactment, adoption, promulgation or modification of any federal, State or local law, ordinance, code, rule or regulation (other than by the Village or with respect to those made by the Village, only if they violate the terms of this Agreement); (2) the order or judgment of any federal or State court, administrative agency or other governmental body (other than the Village); or (3) the adoption, promulgation, modification or interpretation in writing of a written guideline or policy statement by a governmental agency (other than the Village, or, with respect to those made by the Village, only if they violate the terms of this Agreement). Change in Law, for purposes of this Agreement, shall also include the imposition of any conditions on, or delays in, the issuance or renewal of any governmental license, approval or permit (or the suspension, termination, interruption, revocation, modification, denial or failure of issuance or renewal thereof) necessary for the undertaking of the actions to be performed under this Agreement (except any imposition of any conditions on, or delays in, any such issuance or renewal by the Village, except as provided herein).

"Development Director": The Village's Community Development Director.

"Developer": Includes McNaughton Development, LLC and its transferees, successors-in-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property, or any other person and each and all homeowners associations or their equivalent within the Property.

"Effective Date": The date that the last signatory signs this Agreement, which shall be written in the first paragraph of this Agreement.

"Force Majeure": See definition of Uncontrollable Circumstance and Subsection 17.N. of this Agreement.

"IDOT": The Illinois Department of Transportation.

"IEPA": The Illinois Environmental Protection Agency.

"Infrastructure": All utilities including without limitation drinking water, sanitary sewer, storm sewer and detention basins, electric, gas, and telecommunication; stormwater system elements including without limitation detention facilities, streets, drive aisles, driveways, drive aprons, curbs, gutters, street lights, and parking spaces; sidewalks, other pedestrian ways, pedestrian amenities, pedestrian lighting, way-finding signs, and trees and other landscaping; and all related improvements for the Development, whether private or public and whether within the Property or within adjacent rights-of-way and property.

"Infrastructure Cost Estimate": See Subsection 4.B. of this Agreement.

"LOC": An irrevocable letter of credit issued by a lending institution licensed to do business in the State of Illinois, on a form approved by the Village Attorney.

"MWRD": The Metropolitan Water Reclamation District of Greater Chicago.

"Private Infrastructure": All Infrastructure other than Public Infrastructure, including the Stormwater Conveyance System.

"Property": The real property legally described and depicted in **Exhibit "C"** attached to this Agreement.

"Public Infrastructure": Infrastructure that is being dedicated to the Village or to other governmental agencies, including without limitation drinking water mains (but not water service lines to buildings), water hydrants, sanitary sewers and other elements determined by the Village. In the event of any ambiguity, the Village will determine whether an Infrastructure element is public or private.

"Director of Engineering Department": The Village's Village Engineer.

"Reimbursable Costs": See Subsection 8. of this Agreement.

"Requirements of Law": All applicable federal and State of Illinois laws and statutes, the Zoning Code, the Village Code, and the Village's building, stormwater management, and other codes and regulations. The Title 9 Building Regulations of the Village Code will apply to architectural and structural plans and specifications for all buildings within the Development unless preempted by State of Illinois or federal law or the Village designates, in writing, other applicable standards. Otherwise, Village-adopted model codes will apply and State of Illinois building codes will apply in the absence of an applicable Village-adopted model code. Accessibility standards of the Americans with Disabilities Act (42 U.S. Code § 12101) will apply to all common areas. The Title 9 Building Regulations of the Village Code reference to 2009 ICC Accessible and Usable Buildings and Facilities (ANSI) (2003 Safe Harbor of FHA) in conjunction with the standards of the Illinois Accessibility Code will be followed for all residential units.

"Site Work": Grading land, excavating soil and debris, environmental remediation, installation of underground utilities, and similar activities.

"Stormwater Conveyance System": All elements of Infrastructure that relate to the management, detention, storage, and conveyance of stormwater, which shall be privately owned and maintained by the Developer and then by the homeowners association.

"Uncontrollable Circumstance": An event that is beyond the reasonable control of and occurs without the fault of the involved party, including without limitation to the following events: (i) an insurrection, riot, civil disturbance, sabotage act of a public enemy, explosion, nuclear incident, war, or naval blockade; (ii) an epidemic, pandemic, hurricane, tornado, landslide, earthquake, lightning, fire windstorm, or other casualty or act of God, or persistent bad weather that impedes progress; (iii) a government condemnation or taking; (iv) a strike, lockout, or other labor dispute other than those caused by the unlawful acts of the Developer; and (v) a Change in Law. Uncontrollable Circumstance does not include any of the following events or conditions: Economic hardship, impracticability of performance, commercial, economic or market conditions, or a failure of performance by a contractor (except as caused by an event that is an Uncontrollable Circumstance as to that contractor). See Subsection 17.N. regarding Force Majeure.

"Village Code": The Western Springs Code of Ordinances.

"Village Manager": The Western Springs Village Manager, or their designee.

"Zoning Code" or "DCO": The Western Springs Development Control Ordinance.

SECTION 3. PROPERTY ACQUISITION; TERMINATION.

Property Acquisition. The Developer has entered into a real estate purchase contract with the Property Owner, and, subject to the terms and conditions of this Agreement, intends to acquire fee simple title to the Property on or before March _____, 2025 (the "**Acquisition Deadline Date**"). The closing date at which the Developer obtains fee simple title to the Property is referred to as the "Acquisition Date". If the Developer does not acquire fee simple title to the Property by 5:00 p.m. CST on the Acquisition Deadline Date, the Developer shall send written notice to the Village within five (5) calendar days after of the expiration of the Acquisition Deadline Date advising that the acquisition of the Property did not occur and providing a status on the acquisition consisting of one of these responses: (i) the Property Owner or the Developer has terminated the real estate purchase contract; or (ii) the Property Owner and the Developer have mutually agreed to terminate the real estate purchase contract; or (iii) the Developer and the Property Owner have extended the Acquisition Date and are actively working on matters to complete the acquisition of the Property by the extended Acquisition Date. If the Property Owner or the Developer terminates the real estate purchase contract or the Property Owner and the Developer have mutually agreed to terminate the real estate purchase contract, this Agreement shall automatically terminate without any further action being taken by either Party, and without any liability to either Party. In the event the Developer does not purchase the Property from the Property Owner, this Agreement shall automatically terminate without further action by the Corporate Authorities of the Village and shall be void and unenforceable, and the Developer agrees to waive all claims, causes of action and damages of any kind that the Developer could file against the Village arising out of or related to the termination of this Agreement based on the Developer not purchasing the Property. If the Developer and the Property Owner extend the Acquisition Date and actively work on matters to complete the acquisition of the Property by the extended Acquisition Date, this Agreement shall remain in effect until either the Property Owner or the Developer terminates the real estate purchase contract or the Property Owner and the Developer mutually agree to terminate the real estate purchase contract, subject to the next sentence. This Agreement shall automatically terminate without any further action being taken by either Party, and without any liability to either Party, if the Developer does not acquire the Property within twelve (12) months of the approval date of the Approval Ordinance, based on the DCO's automatic expiration provision that applies to Village-approved conditional use permits (See, Section 10-3-14K (Condition Uses; Revocation)) of the DCO. Notwithstanding any other provision or term in this Agreement, each Party

expressly agrees that the cure remedy under Section 16 (Default; Cure) of this Agreement shall not apply to the automatic expiration provision that applies to Village-approved conditional use permits. The Corporate Authorities of the Village, in their sole discretion, may pass an ordinance for this Development that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property. The Developer agrees to waive any claims or causes of action for damages of any kind that it could file against the Village for not passing an ordinance that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property. The Developer also agrees to indemnify, defend and hold harmless the Village and its appointed and elected officials, employees, engineers, attorneys, agents and representatives from any claims or causes of action or damages of any kind that could be filed against the Village by the Property Owner or any person for not passing an ordinance that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property.

B. **Lawn Avenue Right-of-Way Vacation.** The Developer agrees to accept title to the Lawn Avenue ROW Parcel that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development. The Village shall provide the Developer a title commitment free and clear of any tax liens or other financial encumbrances, subject to all conditions imposed by the Village under this Agreement and the Lawn Avenue right-of-way vacation Ordinance 25-_____.

SECTION 4. DEVELOPMENT PLANS.

A. **Development Plans.** Prior to the issuance by the Village of any permit for construction within the Property, the Developer must provide to the Village the following detailed Final Development Plans for the Development, all of which must be substantially consistent with **Exhibit "D"** to the Approval Ordinance and shall be reviewed by the Community Development Director, the Director of Fire and Emergency Medical Services and the Director of Law Enforcement Services, the Village Engineer, the Village Attorney, and other Village consultants (collectively, the "Village Staff") as part of the Village development plan review process, and shall be returned to the Developer for updating and corrections to comply with the Village Staff's development plan review comments and requirements (the "Approved Plans"). The final version of the Approved Plans shall be stamped by a licensed engineer or signed by a licensed architect. The Developer may re-submit updated Final Development Plans to address the Village Staff's plan review comments and requirements. If the Developer objects to any of the Village Staff's development plan review comments and requirements, the Developer may file a written request with the Village Board seeking approval of a modification(s) to the Village Staff's development plan review comments and requirements, which may or may not be granted by the Village Board, in its sole discretion, at an open public meeting. The Approved Plans, at a minimum, shall consist of final versions of:

(i) Detailed engineering plans, including without limitation civil, structural, architectural, lighting, construction staging, mechanicals screening, on-site and off-site storm water drainage plans, and Infrastructure plans.

(ii) Detailed, dimensioned site plans.

(iii) Detailed, dimensioned landscaping plans.

(iv) Building Elevations and Village-approved Exterior Building Materials List (color, material type, etc.).

(v) Signage plan for buildings, traffic, parking and other informational signs within the Development.

(vi) Stack wall for the townhouses. Prior to issuance by the Village of any permit for construction other than Site Work, the Developer must assemble a representative "stack" wall on the Property with the Village-approved masonry, wood, and other construction materials to be used on the townhouse buildings. The stack wall must precisely show the materials and techniques to be used for the walls of the townhouses. The stack wall will be reviewed by the Community Development Director and will be approved by the Community Development Director only if it conforms to the Approved Plans.

(vii) Such other plans and documents reasonably required by the Village Staff for the construction of the Development by the Developer.

B. **Infrastructure Cost Estimate.** The Developer must prepare an itemized estimate of the cost of construction of each component of the Infrastructure (the "Infrastructure Cost Estimate") and submit the estimate to the Village prior to the issuance by the Village of any permit for construction. The Village Engineer will review, revise as necessary, and approve the Infrastructure Cost Estimate.

SECTION 5. DEVELOPMENT AND USE OF THE PROPERTY.

Commencement and Completion of Construction.

(i) The Developer intends to commence site improvement or construction work on the Development not more than one hundred eighty (180) calendar days after the Village Board's approval of the Approval Ordinance (the "**Anticipated Commencement Date**"), subject only to Force Majeure.

(ii) The date the Developer receives a Village site development permit or a building permit authorizing work to proceed on the Development, or any part thereof, shall be the "**Commencement Date**".

(iii) Construction of the Development shall substantially comply with the provisions of the Approval Ordinance and each of the conditions of approval set forth in the Approval Ordinance.

(iv) Construction of the Development shall substantially comply with, and the Development shall be substantially completed in accordance with, the timeframes outlined on Developer's "Construction Schedule", attached hereto as **Exhibit "E"** and incorporated herein (the "Construction Schedule"), but not later than twenty-four (24) months after the Commencement Date, subject to Force Majeure, with the actual date of Substantial Completion being the "**Substantial Completion Date**". "Substantial Completion" or "Substantially Completed" shall mean that the residential component of the Development is eligible to receive a certificate of occupancy, and the public improvements are completed to the Village's dedication standard, to the extent applicable to such public improvements.

(v) Developer may start construction on its model home units numbers 1 to 4 and 27 to 29 prior to the completion of the extension of Heritage Court through the Property; however, the Developer shall install a gravel stone road within the proposed width of the Heritage Court extension from the west edge of Wolf Road to the frontage of the model units (approximately except for the 108 feet). The gravel stone road shall be continuously maintained free from of potholes and wheel ruts by the Developer, at its cost, to ensure that the gravel road can be used for emergency vehicle access. All underground utilities to the model units must be installed at the same time the binder course is installed.

B. **Substantial Compliance with Approved Plans.** Except for minor alterations due to field conditions approved by the Village Engineer or Development Director, the construction of the Development shall substantially conform with: (i) the Approval Ordinance, (ii) this Agreement, (iii) the Approved Plans, and (iv) the Requirements of Law; and shall not materially impact the exterior materials and/or exterior architectural designs included in the Approved Plans, were not rejected by the Village during the design phase of the Development, and are necessary for the Developer to complete the Development, or any portion thereof, within the applicable portion of the Development Construction Schedule. Any type of approved plan changes must comply with Section 10-8 of the Village Code.

C. **Plat of Subdivision; Easements for Cross Access.** Prior to the issuance of any permit for construction, the Developer must prepare and file the final Plat of Heritage Crossing Subdivision, in a form satisfactory to the Village, granting cross access easements by the general public and the property owners of the Heritage Springs Subdivision and the Heritage Crossing Subdivision onto and across the pedestrian ways, roads (Heritage Court), and other paths within the Property.

D. **Development – Prior to Property Acquisition or Issuance of Permits.** No construction, improvement or development of any kind by the Developer shall be permitted on any portion of the Property unless and until: (a) the Developer acquires title to the Property; and (b) the Developer has been issued either a Village site development permit, demolition permit, or a Village building permit. Further, no occupancy of the Development may occur prior to the issuance of a Village Certificate of Completion for the Infrastructure and a Village certificate of occupancy for the portion of the Development that occupancy is sought (i.e., individual certificates of occupancy shall be issued for individual townhome units only after the Village issues a Certificate of Completion for the individual townhome building) Model units will only be granted a certificate of completion for daytime (7:30 am to 8:00 pm) use for marketing purposes.

E. **Development – Failure to Complete.** In the event that the Developer fails to complete the Development on or prior to the Substantial Completion Date, or fails to comply with the Construction Schedule (in either case, subject to Force Majeure), and such failure continues for more than thirty (30) calendar days after notice thereof by the Village to the Developer, then:

(i) The Village, by delivery of written notice to the Developer, may require the Developer to submit, within fifteen (15) calendar days, a plan pursuant to which the Developer will: (i) avoid falling further behind the dates set forth in the Construction Schedule; and (ii) complete construction of the Development in accordance with the Construction Schedule, as modified to reflect the "catch-up" plan (a "**Catch-Up Plan**"), for approval by the Village Manager, which approval shall not be withheld unreasonably provided that the Catch-Up Plan has been approved by the Developer's construction lender (the "**Lender**"). At such time as the Village has approved a Catch-Up Plan, the Developer shall

use commercially reasonable efforts to implement, and diligently pursue and complete, the activities of the Catch-Up Plan.

(ii) If the Developer fails to timely: (i) submit a Catch-Up Plan to the Village that has been approved by the Lender, or (ii) implement or complete the Catch-Up Plan; which failure continues for more than thirty (30) calendar days, then the Developer shall be deemed to be in default under the Catch-Up Plan and the Village shall have the right, but not the obligation, to hire a replacement contractor to complete the unfinished Public Infrastructure and Stormwater Conveyance System ("Default Work") and shall have the right to use the Developer Security (as defined below) to pay the contractor to complete such Default Work. Upon such a default by the Developer, subject to and in accordance with the terms and conditions of any construction financing agreement, the Lender will have the right, but not the obligation, to exercise and perform the Developer's rights and obligations under this Agreement, including the hiring of a replacement contractor to complete the Default Work and/or to complete the Development. If the Village elects to complete the Default Work, then the Developer shall be obligated to pay, or to reimburse the Village for, all costs and expenses of completing such work that are in excess of the proceeds of the construction financing agreement and the Developer's Security.

(iii) The Developer shall be responsible for all costs and expenses to prepare and implement and complete the Catch-Up Plan.

(iv) The rights and remedies set forth in this Subsection 5.E. shall be the sole remedies available to the Village for the failures specified in this Subsection; provided that the Village shall have: (i) the remedy of specific performance to enforce the obligations of Developer pursuant to the terms and conditions of this Subsection; and (ii) the right to recover from the Developer all costs and expenses, including reasonable attorney fees, incurred by the Village in connection with exercising its rights and remedies under this Subsection, together with interest at the rate of eight percent (8%) per annum on any Village funds expended prior to reimbursement from the Developer Security.

F. **Dedication and Maintenance of Land.** The Developer shall comply with the dedication of land and maintenance of landscaping obligations as set forth in the Conditions of the Approval Ordinance. The Developer shall use commercially reasonable efforts to convey, transfer or dedicate any portion of Property to Cook County or any other necessary governmental agency that is required to provide for the street access (ingress and egress) point onto Wolf Road for the Development.

G. **Development Covenants, Conditions, and Restrictions.** Prior to the issuance by the Village of any building permit other than a permit for Site Work, the Developer must present to the Village for review and comment and approval a set of Covenants, Conditions, and Restrictions ("CC&Rs") for the Development. The CC&Rs may not be amended without the prior express written consent of the Village at any time or in any manner that alters or interferes with any easement, grant, right, or remedy granted or reserved to the Village, including without limitation the right of the Village: (i) to cure any violation of the CC&Rs, this Agreement, the Approval Ordinance, or any other Requirements of Law, (ii) to perform necessary maintenance and repairs, (iii) to be reimbursed for all of the Village's costs and expenses related to maintenance and repairs, and (iv) to have a lien against the Property for unpaid costs and expenses. After Village approval, the CC&Rs shall be filed with the Cook County Clerk's Office, Recording Division ("CCCORD") by the Developer, at its cost.

H. **Maintenance of and Damage to Public Property and Off-Site Improvements.** During construction of the Development, the Developer must: (i) maintain all streets, sidewalks, and other public property adjacent to the Property in a good and clean condition and free of hazards at all times, (ii) promptly clean all mud, dirt, or debris deposited on any street, sidewalk, or other public property in or adjacent to the Property by the Developer or any agent of or contractor hired by, or on behalf of, the Developer, and (iii) repair or replace all damage to any private or public utilities or other private or public improvements of any kind that are located on-site or off-site relative to the Property that may be caused by the activities of, or on behalf of, the Developer or any employees, contractors, subcontractors or agents hired by, or on behalf of, the Developer. The Developer agrees to promptly repair or replace or restore such damaged improvements with like-kind and like-quality materials. If, within twenty-four (24) hours after the Village gives the Developer notice to clean mud, dirt, or debris or to repair damage in compliance with this Subsection, the Developer neglects or fails to clean or repair or to undertake with due diligence to clean or repair the affected public property, then the Village may clean or repair the affected property, either with its own forces or with contracted forces, and recover from the Developer the greater of $750.00 or the sum equal to the total cost incurred by the Village including without limitation administrative costs. The

I. **Environmental Conditions.** The Developer must remain in compliance with all applicable federal and State of Illinois environmental laws and regulations while constructing the Development.

J. **Building Certification.** RESERVED.

K. **Estimated Site Development Costs and Construction Budget.** Based on the Approved Plans, the "Estimated Site Development Costs" to develop, construct and complete the Development's public and private infrastructure is $1,285,620.35. The Developer shall deliver to the Village an itemized letter from a licensed engineer, certifying to the Village that, to such engineer's knowledge following reasonable investigation and inquiry, the Estimated Development Costs will not be less than $1,285,620.35.

L. **Development Financing.** At the time the application for a site development permit is submitted, the Developer shall provide the Village Manager with a confidential letter issued by the Developer that lists the tiered funding sources to be used to complete the Development and includes marked-confidential copies of supporting financing documents consisting of secured, fully executed construction financing term sheets, loan obligations and written proof of Developer equity contributions and investor equity contributions acceptable to the Village and sufficient to demonstrate that adequate funds are available to Substantially Complete the Development, including a financing commitment letter or a construction loan commitment letter issued by a bank or other financial lender for the Development. The Developer's financing commitments shall be sufficient to cover the equity and debt financing, including the Developer Security, to Substantially Complete the Development. In the event the Developer is unable to provide the Village with written evidence of the Development financing sufficient to Substantially Complete the Development within the time frame set forth in this Agreement, the Village may, exercising its sole discretion, terminate this Agreement and all of the Parties' rights, duties and obligations under this Agreement shall terminate without any liability being imposed on the Village or the Developer. The confidential letter and supporting financial submittals shall be retained on file with the Village Clerk's Office and shall not be attached to this Agreement but is referenced as **Group Exhibit "F"** to this Agreement.

SECTION 6. CONSTRUCTION AND MAINTENANCE OF INFRASTRUCTURE.

A. Developer's Duty to Construct Infrastructure. The Developer, at its cost, must construct and install all of the Infrastructure.

B. Standards Applicable to Infrastructure. The following standards apply to the construction of the Infrastructure.

(i) General Standards. All Infrastructure must be constructed in compliance with the standards in this Agreement and all Requirements of Law. All work performed in the construction of the Infrastructure must be conducted in a good and workmanlike manner. All materials used for construction of the Infrastructure must be new and of first-rate quality.

(ii) Special Standards. Construction of the Infrastructure must conform to the applicable standards of the La Grange Highlands Sanitary District, MWRD, IDOT, Cook County and the IEPA.

(iii) Prosecution of the Work. Once Site Work has begun, the Developer and all of its contractors must use commercially reasonable efforts to prosecute work on the Infrastructure in a diligent manner until the work is properly completed.

(iv) Inspection, Engineering, Testing Services. In general conformance with the Village Development Control Ordinance 10-10-17C, the Developer must provide, at its cost, all inspection, engineering, and testing for construction of the Infrastructure, including without limitation: (a) on-site construction supervision services, (b) periodic inspections of construction of the Public Infrastructure conducted by a professional engineer, and (c) third-party materials sampling and testing services. The Developer must promptly provide the Village with the names of the project manager and project engineer and telephone numbers at which the project manager and project engineer can be reached at all times.

(v) Village Inspections and Approvals. Village representatives have the right and authority, and the permission of the Developer, to inspect all work on the Infrastructure at all times between 8:00 a.m. and 6:00 p.m. weekdays, and at any other time work is taking place within the Property, and in the case of an emergency at any time reasonably determined by the Village, to confirm compliance with all requirements of this Agreement and all Requirements of Law.

(vi) Other Approvals. When the construction of Infrastructure requires the permission or approval of a regulatory agency, including without limitation the La Grange Highlands Sanitary District, MWRD, IDOT, Cook County or the IEPA, then the Developer must use all commercially reasonable efforts required to obtain the required permission or approval. The Developer may not commence work requiring the permission or approval of any such agency in advance of receiving that permission or approval.

C. Approvals of Infrastructure. At the time the site development permit is issued, a list of required inspections will be provided to the Developer. The Developer will be responsible for completing all required inspections. In the event that a required inspection is not completed, the Village reserves the right to request that the Developer re-expose the Infrastructure at the Developer's cost for inspection. When an Infrastructure improvement has been completed, the Developer must request final inspection and approval of that Infrastructure improvement by the Village. The Village will inspect that Infrastructure improvement and may prepare a punch list of items requiring repair or correction. The Developer must promptly make all necessary repairs and corrections as specified on the punch list. The Village will not approve an Infrastructure

improvement until it has been fully and properly completed in accordance with the Approved Plans, including without limitation all punch list work for that Infrastructure improvement.

D. Acceptance, Dedication and Acceptance of Public Infrastructure. The Developer will dedicate to the Village or to any other governmental agency with oversight jurisdiction each Public Infrastructure improvement after it is approved by the Village or the other governmental agency with oversight jurisdiction. The Village will accept a Public Infrastructure improvement when it has been fully and properly completed, but nothing will constitute an acceptance by the Village of a Public Infrastructure improvement except express written acceptance by the Village. Prior to the Village's acceptance, the Developer must execute, or cause to be executed, all documents reasonably requested by the Village to transfer ownership of the Public Infrastructure improvement to the Village, free and clear of all liens, claims, and encumbrances or restrictions that would prevent the Village from operating, maintaining, repairing, or replacing that Public Infrastructure improvement. The documents transferring ownership of a Public Infrastructure improvement to the Village (e.g., bill of sale and affidavit of title, etc.) must be reasonably acceptable in form and substance to the Village Attorney. Within thirty (30) calendar days of the acceptance, dedication or conveyance, the Developer shall provide the Village Manager with final, executed copies of the acceptance, dedication or conveyance documents that relate to each component of the Public Infrastructure improvements after it is approved by the other governmental agencies with oversight jurisdiction.

E. Infrastructure Guarantees. The Developer guarantees the prompt and satisfactory correction of every defect or deficiency in any Infrastructure that occurs or becomes evident within two (2) years after Village approval and acceptance of that Infrastructure, and in the case of stormwater management system elements three (3) years, pursuant to this Agreement. If any defect or deficiency occurs or becomes evident during the 2-year or 3-year period, then the Village will give notice to the Developer stating the defect or deficiency and the Developer must correct the defect or deficiency within ten (10) calendar days after receipt of the notice or, if the defect or deficiency cannot reasonably be corrected within that 10-day period, then within a longer period of time as is reasonably necessary to correct the defect or deficiency so long as the Developer has promptly commenced and uses commercially reasonable efforts to diligently pursue the correction. If the defect or deficiency is not corrected within the required time period, then the Village may undertake the correction and then the Village will have the right to draw from the performance securities deposited pursuant to Section 9 of this Agreement to reimburse itself for all costs and expenses incurred in making the correction. If any Public Infrastructure is repaired or replaced by the Developer pursuant to the demand of the Village, then the guaranty provided by this Subsection 6.E. will be extended, as to the repair or replacement, for two (2) full years after the date of completion of the repair or replacement.

F. Perpetual Maintenance of Private Infrastructure. The Developer, and then the homeowners association, must maintain, at its cost and expense, all Private Infrastructure at all times in good and serviceable condition consistent with Village codes and generally accepted engineering practices, including without limitation Village codes and ordinances and MWRD standards, as applicable. If at any time the Developer, or the homeowners association, is in breach of this standard, as determined by the Village, then the Village may issue a citation to, and impose a fine on, the Developer, or the homeowners association, as provided in the Village Code. In addition, the Village may issue notice stating that the Developer, or the homeowners association, must cure the breach within thirty (30) calendar days or, if the breach cannot reasonably be cured

within thirty (30) calendar days, then within a date certain set by the Village. The Developer, or the homeowners association, must promptly commence the cure and use commercially reasonable efforts to diligently and continuously pursue the cure to completion. If the cure is not completed within the required time, then the Village may, but is not in any way obligated to, undertake the cure using its own forces or outside forces. The Developer, or the homeowners association, will be liable for, and must reimburse to the Village, all costs and expenses incurred by the Village to cure the breach. If the Village's costs and expenses have not been reimbursed in full within thirty (30) calendar days after notice from the Village, then all unpaid costs and expenses will become a lien against the Property in its entirety and the Village will have the right to collect the unpaid costs and expenses and to enforce the lien in the same manner as mortgage foreclosure proceedings. Under no circumstances will the Village ever be required or obligated to maintain or repair any Private Infrastructure. The terms of this Subsection 6.F. shall be incorporated in the CC&Rs. Maintenance obligations for the Stormwater Conveyance System shall consist of:

(i) **Operations and Maintenance Manual for Stormwater Conveyance System:** The Developer shall comply with the maintenance and operations obligations for the Stormwater Conveyance System set forth in and required by the Operations and Maintenance Manual, per the Approval Ordinance and Section 10-11-11 (Stormwater Management Requirements For All Developments) of the DCO. A copy of the Operations and Maintenance Manual is attached hereto as **Exhibit "G**" and made a part hereof.

(ii) **Maintenance Obligations Imposed on the Developer and Then the Homeowners Association:** The maintenance of the Stormwater Conveyance System for the Development shall be the responsibility of the Developer and then the homeowners association. The Developer guarantees that it and all future owners of the Property shall maintain the Stormwater Conveyance System.

(iii) **Inspection Access by Village Representatives:** The Developer specifically authorizes representatives of the Village to enter onto the Property for the purpose of conducting inspections and testing of the Stormwater Conveyance System.

(iv) **Maintenance Schedule:** The Developer shall comply with the "Schedule for Regular Maintenance" of each aspect of the Stormwater Conveyance System and shall provide for access to the Stormwater Conveyance System for inspection and testing by authorized representatives of the Village. In the even that any authorized representatives of the Village notify the Developer, or the homeowners association, in writing of any maintenance problems which require correction, the Developer, or the homeowners association, shall make such corrections within thirty (30) calendar days of such notification. The Village shall be reimbursed by the Developer and then by the homeowners association for the actual costs and fees incurred relative to any inspection and/or testing conducted by its representatives. If the corrections are not made within this time period, the Village may have the necessary work completed and assess the cost to the Developer or the or the homeowners association.

(v) **Annual Maintenance Inspections:** All components of the Stormwater Conveyance System shall be inspected by representatives of the Developer and then the homeowners association not less often than once per year. A written report shall be prepared of the results of any inspection and a copy of the report shall sent to the Village Manager detailing any problems which need

correction within thirty (30) calendar days of the date of the report or by no later than September 30 each year.

G. Abandonment of Construction. If the Developer abandons the Development or any part of the Development, then the Developer, within ninety (90) calendar days after notice from the Village, must: (i) remove all partially constructed improvements from the Property, (ii) backfill all excavations, and (iii) spread topsoil and plant grass seed throughout the Property, all to the satisfaction of the Village (collectively the "Required Restoration"). For purposes of this Subsection 6.G, "abandons" means cessation of construction for a continuous period of ninety (90) calendar days for any reason other than Force Majeure. If the Developer fails or refuses to complete the Required Restoration within the 90-day period, or such longer period of time as is reasonably necessary to complete the Required Restoration so long as the Developer has promptly commenced and uses commercially reasonable efforts to diligently pursue the Required Restoration, then the Village will have, and is granted in addition to all other rights afforded to the Village in this Agreement and by law, the right, at the Village's option, to hire a contractor to complete part or all of the Required Restoration. Thereafter, the Village may charge the Developer an amount equal to the Village's actual costs of the Required Restoration including without limitation contractor costs, disposal costs, administrative personnel fees and costs, and legal fees (collectively the "Charged Amount"). If the Charged Amount is not paid by the Developer within thirty (30) calendar days after notice from the Village, then the Charged Amount, and all costs incurred by the Village related to collection of the Charged Amount (the "Collection Costs"), may be deducted from the Developer Security and will become a lien against the Property, and the Village will have the right to collect the Charged Amount and the Collection Costs and to enforce the lien in the same manner as mortgage foreclosure proceedings.

H. Progress Meetings. At all times, the Developer and the Village shall each have an individual designated as the Developer's and the Village's primary point of contact for Development-related matters. The Developer shall meet on a monthly basis with the Development Director and Village Engineer, or their designee, and other Village staff as appropriate, to provide a comprehensive progress report on the Development. Appropriate Development team personnel shall attend the meeting on behalf of the Developer and the Village, and shall provide and exchange information regarding the status of construction and occupancy, pending permit requests and other appropriate information.

I. Village Construction Manager Consultant. The Village reserves the right to hire a construction manager consultant to assist the Village and its staff with all aspects of the Development, including but not limited to compliance with the terms of this Agreement, the plan review process, inspections, reporting and oversight of the construction of the Development. The compensation and other employment benefits payable to the construction manager consultant for their work relative to the Development qualifies as a charge under the Reimbursable Costs.

"As-Built" Development Plans. The Developer, at its cost, shall prepare and provide to the Development Director one (1) electronic copy of the "As-Built" Final Development Plans, with all minor modifications and in-field adjustments shown, at the time of issuance of the last occupancy permit for the final townhome unit as part of the Village's issuance of the Certificate of Completion for the Development. The "As-Built" Plans are subject to the review and approval by the Village Engineer and the Community Development Director, or their designees.

SECTION 7. CONSTRUCTION STAGING, TRAFFIC, PARKING; STREETS.

A. **Construction Staging.** The staging of construction work and materials must be in conformance with the Village-approved construction staging plan. The Developer must submit a staging plan for Village review and approval prior to the issuance of the permit for construction of the Development. The Developer shall not allow for the staging any construction equipment, materials or vehicles within the right-of-way of Park Place. The Developer shall not allow the staging of any construction equipment, materials or vehicles on the Property in a manner that creates sight-line issues for vehicle traffic traveling on Wolf Road or Park Place or Heritage Court, as determined by the Village Manager. The Developer or its any contractor, subcontractor or material supplier who violates the Village-approved construction staging plan or this subsection shall each be subject to a $750.00 per day fine for each separate violation that occurs.

B. **Designated Traffic Routes.** The Village, in consultation with the Developer, may designate routes of access to the Property for construction traffic to protect pedestrians and to minimize disruption of traffic and damage to particular streets.

C. **Parking.** All construction-related vehicles, including passenger vehicles and construction equipment, must be parked within the Property or in areas specifically designated in advance in writing by the Village. The Developer shall not allow construction-related vehicles, including passenger vehicles of employees of the Developer, contractors, subcontractors or material suppliers, to be parked on Park Place or Wolf Road during the construction of the Development. The Developer or its any contractors, subcontractors or material suppliers who violates this subsection shall each be subject to a $750.00 per day fine for each separate violation that occurs.

D. **Streets, Sidewalks, and Other Rights-Of-Way.** Any work on streets, sidewalks, and other rights-of-way related to the Development, public or private, must meet the following standards:

(i) Compliance with Plans. All work must comply with the Village-approved plans for that work.

(ii) Protection of Final Surface Course; Restoration. Except with the prior express written consent of the Village, no construction traffic may use any improved public right-of-way after installation of the final surface course of that right-of-way. If the Developer uses an improved public right-of-way for construction traffic, then the Developer must keep that right-of-way free and clear of mud, dirt, debris, obstructions and hazards, and must, after the use is no longer necessary, restore and repair that right-of-way to Village standards.

SECTION 8. DEVELOPER PAYABLE COSTS, FEES, AND EXPENSES AND ESCROW.

A. **Negotiation, Review, Inspection Fees.** In addition to all other costs, payments, fees, or other charges required by this Agreement or by the Requirements of Law or by the Village Code, the Developer must pay to the Village, promptly after receipt of a written demand or demands for payment:

(i) All reimbursable costs, fees, payments, charges, and expenses (collectively "Reimbursable Costs") for outside engineering, outside legal, outside building, and other outside consulting or administrative services incurred or accrued in connection with the review and processing of plans for the development of the Property and in connection with the negotiation, preparation, consideration, and review of this Agreement, at the standard rates charged to the Village, as required

by the Village Code. All Reimbursable Costs for which demand has been made, but payment has not been received, by the Village prior to execution of this Agreement must be made by a certified or cashier's check contemporaneous with the execution of this Agreement by the Village.

(ii) All Reimbursable Costs for inspections of the Property and the Development conducted by outside inspectors.

(iii) All Reimbursable Costs for inspections of an individual dwelling unit until issuance of a final certificate of occupancy for that unit.

(iv) All Reimbursable Costs incurred in connection with a future application, document or proposal, whether formal or informal, of whatever kind submitted by the Developer (or its successor) to the Village in connection with the Development or the use or future development of the Property.

(v) All Reimbursable Costs incurred by the Village for publications and recordings required in connection with the Development or the Property.

B. **Other Village Fees.** In addition to all other Reimbursable Costs required by this Agreement, the Developer must pay to the Village (as applicable): (i) all standard application, plan review, inspection, and permit fees, (ii) all standard water and sewer fees, tap-on fees, and charges, (iii) compensation for trees removed from public parkways or other public right-of-way, (iv) all costs for replacement trees, and (v) all other standard fees, charges, impact fees to the Village and to any other governmental agency with an impact fee ordinance and contributions pursuant to the Requirements of Law and the Village Code.

C. **Reimbursement for Village Work on Utilities.** If during construction of the Development the Developer discovers a water main, sewer main, or other utility that must be relocated to avoid conflict with the Development, then the Developer and the Village will determine how, where, and by whom the utility will be relocated and the Developer must pay all costs and expenses of that relocation.

D. **Developer Escrow.** The Developer shall maintain a "Developer Cash Escrow" with the Village for purposes of payment of the Reimbursable Costs and other costs payable to the Village by the Developer as required by this Agreement, and shall comply with the funding terms of the Developer Escrow as set forth in the Approval Ordinance and Section 9. below.

E. **Compensation for Development Impacts.** RESERVED.

SECTION 9. PERFORMANCE SECURITY.

A. **Developer Cash Escrow; Letter of Credit ("LOC").** As security to the Village for the performance by the Developer of the Developer's obligations to construct and complete the Infrastructure pursuant to and in accordance with this Agreement, the Developer shall deposit with the Village the following:

(i) Developer Cash Escrow. The sum of $58,000.00 cash (the "Developer Cash Escrow") shall be paid by the Developer to be held by the Village and drawn on to reimburse the Village for Reimbursable Costs incurred by the Developer described in Section 8. above. Any interest earned on the Developer Cash Escrow will be added to the escrow, but the Village is not required to cause interest to be earned. If draws on the Developer Cash Escrow reduce the balance in the Escrow to $10,000.00 or below at any time, then the Developer

must restore the Developer Cash Escrow to a level determined by the Village (but not exceeding $30,000.00) until the Certificate of Completion is issued by the Village for the Development. Any money remaining in the Developer Cash Escrow will be distributed to the Developer within sixty (60) calendar days after notice from the Developer to the Village requesting release of such funds, after issuance of the full, final certificate of occupancy for the final townhome building constructed within the Development.

(ii) Performance and Payment Letter of Credit. A performance and payment letter of credit in an amount equal to one hundred ten percent (110%) of the Infrastructure Cost Estimate (the "Performance LOC") in the form required in Subsection 9.E. below.

(iii) Condition Precedent. The deposit of the Performance LOC and the Developer Cash Escrow is a condition precedent to issuance of any permit by the Village for work on the Development.

B. **Maintenance of Performance LOC.** The Performance LOC shall be maintained and renewed by the Developer, and will be held in escrow by the Village, until completion of the Infrastructure and the Public Infrastructure, as determined by the Village, and the approval by the Village Manager and dedication to the Village of the Public Infrastructure, if any, and until the posting of the Guaranty Bonds required by Subsection 9.C. below. After the acceptance and posting of the Guaranty Bonds, the Village will release the Performance LOC and return it to the Developer.

C. **Guaranty Bonds.** As a condition of the Village's approval of the Public Infrastructure and the Village's acceptance, where appropriate, of any or all of the Infrastructure pursuant to Subsections D. and E. of this Section, the Developer must post two (2) Guaranty Bonds, in the form required by Subsection 9.E. below (each a "Guaranty Bond") as follows:

(i) General Guaranty Bond: This Guaranty Bond shall be security for the performance of the Developer's obligations under this Agreement related to Infrastructure. The General Guaranty Bond will be in the amount of ten percent (10%) of the Infrastructure Cost Estimate and will be held by the Village in escrow until the end of the two-year guaranty period set forth in Subsection 6.E. of this Agreement . or until two (2) years after any necessary modification to or correction of any defect or deficiency in a Public Infrastructure improvement pursuant to Section 6.E. above and payment therefor, whichever occurs later. At the end of the two-year guaranty period, the Village will inspect the Infrastructure to verify whether any modification or corrective repair work needs to be performed, and, if such work is needed, the General Guaranty Bond, shall be retained for two-year period by the Village in accordance with this Subsection.

(ii)

Stormwater Detention Guaranty Bond: This Bond shall be security for the proper construction and operation of the Stormwater Conveyance System. The Stormwater Detention Guaranty Bond will be in the amount of ten percent (10%) of the elements of the Stormwater Conveyance System within the Infrastructure Cost Estimate and will be held by the Village in escrow for a three (3) year period after the certificate completion is issued by the Village for the Development, or for a two (2) year period after any necessary modification to or correction of any defect or deficiency in the Stormwater Conveyance System, whichever occurs later. At the end of the three-year guaranty period, the Village will inspect the Stormwater Conveyance System to verify whether any modification or corrective repair work needs to be performed, and, if such work is needed, the

Stormwater Detention Guaranty Bond , shall be retained for two-year period by the Village in accordance with this Subsection.

If the Village is required to draw on a Guaranty Bond by reason of the Developer's failure to fulfill its obligations under this Agreement, then the Developer, within twenty (20) calendar days thereafter, must cause the Guaranty Bond to be increased to its full original amount. "Developer Security" shall consist of the Developer Cash Escrow, the Performance LOC the General Guaranty Bond and the Stormwater Detention Guaranty Bond.

D. **Costs of Developer Security.** The Developer is responsible for the full cost of securing and maintaining the Developer Cash Escrow, the Performance LOC and the Guaranty Bonds.

E. **Forms of Letters of Credit.** The Performance LOC and the Guaranty Bonds must be in substantially the forms attached to this Agreement as **Exhibit "H",** with minor revisions as may be requested by the issuer and approved by the Village Attorney. Each letter of credit also must be from a bank having capital resources of at least $25,000,000, with an office in the Chicago Metropolitan Area or other location acceptable to the Village and insured by the Federal Deposit Insurance Corporation. Each letter of credit must, at a minimum, provide that: (i) it will expire no earlier than the later of two (2) years after the date of its issuance or thirty (30) calendar days after delivery to the Village, in the manner provided in Subsection 9.G. below, of written notice that the letter of credit will expire, (ii) it may be drawn on based on the Village Manager's certification that the Developer has failed to fulfill any of the obligations secured by the letter of credit, (iii) it does not require the consent of the Developer prior to any draw on it by the Village, (iv) it cannot be canceled without the prior written consent of the Village, and (v) if at any time it will expire within thirty (30) or any lesser number of calendar days, and if it has not been renewed, and if any obligation of the Developer secured by the letter of credit remains uncompleted or unsatisfactory, then the Village may call and draw down the letter of credit and thereafter either hold all proceeds as security for the satisfactory completion of all Developer obligations or employ the proceeds to complete all obligations and to reimburse the Village for any and all costs and expenses, including legal fees and administrative costs, incurred by the Village in connection therewith, as the Village may determine.

After completion of the Developer's obligations to construct and complete the Infrastructure in accordance with this Agreement, and after reimbursement of the Village for all costs and expenses incurred by the Village, including without limitation legal fees and administrative costs, then the Village will release to the Developer any proceeds remaining on deposit with the Village drawn from the Performance LOC and return the Performance LOC to the Developer. The Performance LOC will provide that the aggregate amount of the Performance LOC may be reduced once, upon joint written direction by the Developer and the Village, to the amount of twenty-five percent (25%) of the Infrastructure Cost Estimate when Infrastructure totaling seventy-five percent (75%) of Infrastructure Cost Estimate have been completed and accepted by the Village. The reduction to reimburse the Developer for payment of Infrastructure Improvement work satisfactorily completed will be allowed only after the Developer has provided certified contractors' sworn statements, certified schedule of values, partial or final waivers of lien, proof of payment of contractors and subcontractors, bank statements, etc., as may be appropriate, and all additional documentation as the Village may reasonably request to demonstrate satisfactory completion of the Infrastructure Improvement in question and full payment of all contractors, subcontractors, and material suppliers.

The Guaranty Bonds shall not be reduced to reimburse the Developer for any cost incurred in satisfaction its obligations under Section 8. or Section 9. of this Agreement.

F. **Replenishment of Developer Security.** If at any time the Village reasonably determines that the funds remaining in the Developer Cash Escrow or the Performance LOC or a Guaranty Bond are not sufficient to pay in full the remaining unpaid cost of all Infrastructure and all unpaid or reasonably anticipated Village costs, fees, and expenses, or that the funds remaining in a Guaranty Bond are not, or may not be, sufficient to pay all unpaid costs of correcting any and all defects and deficiencies in the Public Infrastructure and all unpaid or reasonably anticipated Village fees, costs, and expenses, then, within twenty (20) calendar days after a demand by the Village, the Developer must increase the amount of the Developer Cash Escrow or the Performance LOC or a Guaranty Bond to an amount, as determined by the Village Engineer, to be sufficient to pay unpaid costs, fees, and expenses. Failure by the Developer to increase the amount of the Developer Security will be grounds for the Village to retain any remaining balance of the Developer Cash Escrow and to receive the proceeds of, or to draw down, as the case may be, the entire remaining balance of the Performance LOC or a Guaranty Bond.

On completion of the Developer's obligations to construct and complete the Infrastructure pursuant to and in accordance with this Agreement, and after reimbursement of the Village for all fees and all costs and expenses, including legal fees and administrative costs, incurred by the Village, then the Village will release to the Developer any remaining funds in the Developer Cash Escrow and any proceeds remaining on deposit with the Village from the Performance LOC or a Guaranty Bond and will return the letters of credit to the Developer.

G. **Use of Funds in the Event of Breach of Agreement**. If the Developer, after all required notices and cure periods under this Agreement have been provided, fails or refuses to complete the Infrastructure in accordance with this Agreement, or fails or refuses to correct any defect or deficiency in the Public Infrastructure as required by Section 6 above or this Section 9, or fails or refuses to clean or repair property in accordance with a demand made pursuant to Subsection 5.E. or Subsection 7.D.(ii) of this Agreement, or fails or refuses to pay any amount pursuant to Section 8. above within five (5) business days after demand by the Village, or in any other manner fails or refuses to meet fully any of its obligations under this Agreement secured by a letter of credit, then the Village, in its discretion and after a delivery of a 5-day notice to the Developer and the Developer's failure to cure its failure or refusal within that 5-day period, may retain all or any part of the Developer Cash Escrow and/or draw on and retain all or any of the funds remaining in the appropriate letter of credit.

The Village thereafter will have the right to exercise its rights under Subsection 5.E. above and under this Subsection 9.G., to take any other action it deems reasonable and appropriate to mitigate the effects of any failure or refusal, and to reimburse itself from the proceeds of the Developer Cash Escrow and the appropriate letter of credit for all of its costs and expenses, including legal fees and administrative expenses, resulting from or incurred as a result of the Developer's failure or refusal to fully meet its obligations under this Agreement.

If the funds remaining in the Developer Cash Escrow or the appropriate letter of credit are insufficient to repay fully the Village for all costs and expenses, and to maintain a cash reserve equal to a required Guaranty LOC during the entire time the Guaranty LOC should have been maintained by the Developer, then the Developer, on demand of the Village therefor, must immediately deposit with the Village any additional funds as the Village reasonably determines are necessary to fully repay such costs and expenses and to establish such cash reserve.

After: (i) completion of the Developer's obligations to construct and complete the Infrastructure in accordance with this Agreement, (ii) correction of all defects and deficiencies in the Public Infrastructure as required by Subsection 6.E. above, (iii) repair of property in accordance with a demand made pursuant to Subsection 5.E. above, (iv) payment of all amounts demanded by the Village pursuant to this Section 9, (v) compliance with all other terms of this Agreement secured by a letter of credit, and (vi) reimbursement

of the Village for all fees and all costs and expenses, including legal fees and administrative costs, incurred by the Village; then the Village will release to the Developer any remaining Developer Cash Escrow and any proceeds remaining on deposit with the Village from any letter of credit and return the letter of credit to the Developer.

H. **Village Lien Rights.** If any money, property, or other consideration due from the Developer to the Village pursuant to this Agreement is not either recovered from the performance security deposits required in this Section 9. or paid or conveyed to the Village by the Developer within thirty (30) calendar days after a demand for payment or conveyance, then the money, or an amount equal to the Village's reasonable estimate of the value of the property or other consideration, together with interest and costs of collection, including legal fees and administrative expenses, will become a lien upon the Property and the Village will have the right to collect the amount or value, with interest and costs, including legal fees and administrative expenses, and the right to enforce the lien in the same manner as in statutory mortgage foreclosure proceedings.

SECTION 10. INFRASTRUCTURE SSA.

The Village will establish a special service area (the "Private Infrastructure SSA"), the boundaries of which will include all of the Property. The purpose of the Private Infrastructure SSA is to generate funds (the "Private Infrastructure SSA Tax Fund") that the Village may use to provide the special services of maintaining the Private Infrastructure if the Developer fails at any time to properly maintain the Private Infrastructure. The Private Infrastructure SSA will authorize the levy of a special service area tax from time to time on the Property to establish, replenish, and maintain the Private Infrastructure SSA Tax Fund sufficiently to pay for the special services only if the Developer or the homeowners association fails to pay for such services. The Village may from time to time levy the special service tax to replenish the Private Infrastructure SSA Tax Fund in a dollar amount, as determined by the Corporate Authorities of the Village, in their sole discretion, as reasonably necessary to pay for any special services. The Village will not levy a special service tax for collection prior to the issuance of a Certificate of Completion for the Development. The Developer approves, and agrees not to object to, the establishment of the Private Infrastructure SSA as provided in this Section 10 and the levying and expending the Private Infrastructure SSA Funds by the Village, at the Corporate Authorities of the Village's sole discretion, consistent with this Section 10. Nothing regarding the Private Infrastructure SSA will compel or require the Village to provide special services or to levy the SSA tax. The obligation to maintain the Private Infrastructure rests entirely and in perpetuity on the Developer as provided in Subsection 6.N . of this Agreement.

SECTION 11. LIABILITY AND INDEMNITY OF VILLAGE.

A. **No Village Liability.** The Developer acknowledges and agrees that the Village is not, and will not be, in any way liable for any damages or injuries of any kind that may be sustained as the result of: (i) the Village's review and approval of any plan or specification provided by the Developer or the Developer's representatives for the Development; or (ii) the issuance of any approvals, permits, certificates, or acceptances for the Development or use of the Property and that the Village's reviews, approvals, and issuances do not, and will not in any way, be deemed to insure the Developer or any of its transferees, successors-in-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property, and or any other person, and each and all homeowners associations or their equivalent within the Property, against damage or injury of any kind at any time.

B. **Village Procedures.** The Developer agrees not to challenge the Village's approval of this Agreement or of the Approval Ordinance or any other Village approved document that relates to the Development.

C. **Indemnification.** The Developer acknowledges that the accuracy and sufficiency of the Developer's Development Plans and related specifications for the Development are entirely the responsibility of the Developer and are not the responsibility of the Village, regardless of whether the Village reviews or approves the Developer's Development Plans and related specifications for apparent consistency with the Village's codes. The Developer agrees to indemnify the Village and all Village elected or appointed officials, officers, employees, agents, representatives, engineers, and attorneys (collectively the "Indemnitees") from any and all third party claims and causes of action of any kind that may be asserted at any time against the Village and any of the Indemnitees in connection with: (i) any design defect in the Developer's Development Plans and related specifications for the Development or any Infrastructure, regardless of the Village's review and approval of any Developer Development Plans or related specification for the Development or the Infrastructure or the Village's issuance of any approval, permit, certificate, or acceptance for the Development based on the apparent consistency of any Developer Development Plans or related specification for the Development or any Infrastructure Improvement; or (ii) the design, development, construction, maintenance, or use of any portion of the Property or the Infrastructure (each a "Claim" and collectively "Claims"). This indemnity does not apply or extend to any matter concerning maintenance by the Village of any Public Infrastructure after that Public Infrastructure has been accepted by the Village in accordance with this Agreement D.

D. **Defense Expenses.** The Developer agrees to pay all reasonable expenses, including without limitation attorney fees, litigation defense fees and costs, consultant fees and administrative expenses incurred by the Village in examining and tendering the defense of any Claim to the Developer in accordance with Subsection 11.C. above. The Village must promptly notify the Developer in writing of any Claim.

SECTION 12. BINDING NATURE OF AGREEMENT.

The obligations assumed by the Developer under this Agreement are binding on the Developer, on all of the Developer's transferees, successors-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property and each and all homeowners associations or their equivalent within the Property.

SECTION 13. TERM.

This Agreement will run with and bind the Property as long as the Development and its homeowners association continues to exist and operate, and will inure to the benefit of and be enforceable by the Developer, the homeowners association and the Village.

SECTION 14. ENFORCEMENT.

Either Party to this Agreement may enforce or compel the performance of this Agreement, in law or in equity, by suit, action, mandamus, or any other proceeding including without limitation specific performance, except that the Developer agrees that it will not seek, and does not have the right under any circumstances to seek, to recover a judgment against any Village elected or appointed official, officer, employee, agent, representative, engineer, or attorney on account of the negotiation, execution, or breach of this Agreement.

In addition to every other remedy permitted by law for the enforcement of the terms of this Agreement, the Village will be entitled to withhold the issuance of a building permit or a certificate of occupancy for work or occupancy within the Property at any time when the Developer has failed or refused to comply with a material obligation under this Agreement and has not, after the required notices stated herein, cured that failure or refusal within the cure periods, if any, allowed for that failure or refusal.

A. **Compliance with Laws.** The Developer agrees to comply with all applicable laws, rules and regulations of any federal, State or local entity or agency relating to the Development. The Developer will not discriminate against any employee or applicant for employment on the basis of race, color, religion, sex or national origin. To the fullest extent permitted by law, the Developer will take affirmative action to ensure that applicants are employed and treated during employment, without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion, transfer, recruitment, recruitment advertising, layoff, termination, rate of pay or other forms of compensation, and selection for training, including apprenticeship.

B. **Conflict of Interest and Prohibited Interest Disclosures.** Upon the Village's request from time to time during the Term of this Agreement, the Developer will provide a list of all entities owning a greater than one percent (1%) interest in the Developer. Based in part on the information provided by the Developer and in part on information from the Village's independent investigation, the Village will affirm that its Corporate Authorities, and all appropriate Village elected and appointed officials, officers, employees, agents and representatives of the Village, have or will comply with the disclosure and conflict-of-interest provisions of the Public Officer Prohibited Activities Act (50 ILCS 105/3), the TIF Act (65 ILCS 5/11-74.4-4(n)) and the Illinois Governmental Ethics Act (5 ILCS 420). Upon the Village's request, the Developer shall provide the Village with all information required for compliance with the annual TIF report that the Village is required to file with the State of Illinois Comptroller or any such similar financial information, and required for the Village to comply with any disclosure and transparency ordinance or law enacted by the State of Illinois or DuPage County. In addition, the Developer shall provide, on an annual basis, the information required by the TIF Act.

C**.** **Successors and Assigns.** The Developer shall be liable for all of the Developer's obligations under this Agreement. All obligations assumed by the Developer under this Agreement shall be binding on the Developer, and on any and all of the Developer's successors and assigns, and on any and all of the respective successor owners of all or any portion of the Property. To assure that the Developer's successors, assigns and successor owners of all or any portion of the Property have notice of this Agreement and the obligations created by it, the Developer shall:

1. Deposit with the Village Clerk, within thirty (30) calendar days after the Acquisition Date, any consents or other documents necessary to authorize the Village to record a Memorandum of this Agreement, in form and substance reasonably acceptable to the Developer and the Village, in the Office of the Recorder of Deeds of Cook County, Illinois;
2. Notify the Village in writing at least thirty (30) calendar days prior to any date that the Developer intends to transfer fee title to any portion of the Property to any person not a party to this Agreement;
3. Include in the Restrictive Covenant a memorandum or other similar reference(s) to this Agreement sufficient to put third parties on notice of the existence of this Agreement; and

4. Require, prior to the transfer of all or any portion of the Property to any person or entity not a Party to this Agreement that occurs prior to the Substantial Completion Date, the transferee to execute an enforceable written assignment and assumption agreement, in form and substance reasonably approved by the Village Attorney (the "**Transferee Assignment and Assumption Agreement**"), agreeing to be bound by this Agreement and to provide the Village, after request, with reasonable assurance of the financial ability of the transferee to meet any remaining obligations under this Agreement. The Village and the Developer shall record against the Property a memorandum of this Agreement that obligates the owner of the Property from time to time to perform the obligations of the Developer under this Agreement and shall require notice to the Village of any transfer of the Property, which memorandum shall be in form and substance reasonably satisfactory to the Village and the Developer.

The Village agrees that, after a successor becoming bound to the obligations of the Developer created in the manner provided in this Agreement, and providing the financial assurances required in this Section, the liability of the Developer shall be deemed automatically released. The failure of the Developer to provide the Village with a fully executed copy of a Transferee Assignment and Assumption Agreement before completing the transfer shall result in the Developer remaining fully liable for all of the Developer's obligations under this Agreement, but shall not relieve the transferee of its liability for those obligations as a successor to the Developer.

D. **Representations and Warranties of the Developer.**

1. No Gifts. The Developer covenants that no officer, member, manager, stockholder, employee or agent of the Developer, or any other person connected with the Developer, have made, offered or given, either directly or indirectly, to any member of the Corporate Authorities, or any officer, employee or agent of the Village, or any other person connected with the Village, any money or anything of value as a gift or bribe or other means of influencing his or her action in his or her capacity with the Village.
2. Assignment. The Developer may not assign or transfer some or all of its rights or obligations under this Agreement without the prior written consent of the Village, the granting or denial of which consent shall be in the sole discretion of the Village; provided, however, that, without the Village's prior consent, the Developer may assign this Agreement to an entity controlling, controlled by, or under common control with the Developer and/or assign or collaterally assign any of the Developer's rights and/or obligations to the Lender.
3. Prevailing Wage. The Developer and its contractors and subcontractors are required to pay prevailing wages for all or portions of the Development work only if the Illinois Prevailing Wage Act (820 ILCS 130/) (the "IPWA") requires payment of prevailing wages.
4. Property Acquisition. The Developer shall provide the Village with sufficient documentation regarding Developer's ownership of the Property for the Development.
5. Corporate Authorization. This Agreement has been submitted for consideration and review by the board of directors, corporate officers, shareholders, members and/or managers of the Developer, and the Developer's board of directors, corporate officers, shareholders, members and/or managers have taken all

actions required to be taken prior to the execution of this Agreement in order to make the same binding upon the Developer according to the terms hereof, and any and all actions of the Developer's board of directors, corporate officers, shareholders, members and/or managers, as the case may be, precedent to the execution of this Agreement have been undertaken and performed in the manner required by law.

Agreement shall be deemed to be the agreement of any official, agent, employee, consultant or attorney of the Village, in their individual capacity, and no official, employee or attorney of the Village shall be liable personally under this Agreement or be subject to any personal liability or accountability by reason of or in connection with or arising out of the execution, delivery and performance of this Agreement, or any failure in connection therewith.

SECTION 15. INSURANCE AND INDEMNIFICATION.

A. Liability Insurance Prior to Completion. Prior to issuance of Permits, the Developer shall procure and deliver evidence of such policies to the Village, at the Developer's cost and expense, and shall maintain in full force and effect during any period of construction and through completion of construction of the Development, for both ongoing and completed operations, the following types of insurance, written on the comprehensive form and as an "occurrence" policy, in not less than the following amounts:

1. Commercial General Liability Insurance (including property damage insurance): $1,000,000.00 per occurrence and $2,000,000.00 in the aggregate.
2. Contractor's Liability Insurance: $1,000,000.00 per occurrence and $2,000,000.00 in the aggregate.
3. Automobile Insurance: $1,000,000.00 per occurrence and $1,000,000.00 in the aggregate.
4. Umbrella Coverage or Excess Liability Coverage: $5,000,000.00 in the aggregate.
5. Workers Compensation Insurance: Statutory Amount.

Said insurance shall state that the insurance provided by the Developer shall be primary and that any provision of any contract of insurance or other risk protection benefit or self-insurance policy purchased or in effect or enacted by the Village and any other insurance or benefit of the Village shall be in excess of the Developer's insurance. All such policies shall be in such form and issued by such companies as shall be reasonably acceptable to the Village. Each such policy, including any related insurance certificates, endorsements and riders, shall expressly name "the Village of Western Springs and its appointed and elected officials, mayor and trustees, employees, engineers, attorneys, agents and representatives" as additional insureds.

Prior to commencement of construction of the Development, the Developer shall furnish to the Village the above-required certificates of insurance, policies, riders and policy endorsements, with premiums paid in full that contain the insurer(s) written confirmation that the nature, scope, duration and amount of insurance coverage meets the requirements of this Agreement and shall remain in effect for all aspects of the Development for both ongoing and completed operations. The Developer shall provide the Village with satisfactory proof of the above insurance requirements in the form of a certificate executed by an insurer with no less than an A rating by the most recent "AM Best Insurance Rating Guide."

The Village shall be given written notice at least thirty (30) calendar days prior to any cancellation or material amendment of the Developer's insurance policies required hereunder. Alternatively, the Developer may satisfy its insurance obligations in this **Subsection 15.A.** by way of a blanket policy or policies, which includes other liabilities, properties and locations meeting the minimum insurance coverage amounts. The Developer shall provide to the Village a replacement certificate prior to expiration, cancellation or material modification of any policy.

B. Developer's Risk Prior to Completion. Prior to completion of the construction of the Development, as certified by the Village, the Developer shall keep in force at all times builders risk insurance or similar insurance coverage, on a completed value basis, in non-reporting form, against all risks of physical loss, including collapse, covering the total value of work performed and equipment, supplies and materials furnished for the Development (including on-site stored materials), all as to work by the Developer. Such insurance policies shall be issued by companies satisfactory to the Village. The Developer shall provide written notice to the Village at least twenty-one (21) calendar days before any such policy is cancelled or materially modified.

C. Village Review. The Developer acknowledges and agrees that, except for breaches of this Agreement by the Village, the Village is not, and shall not be, in any way liable for any damages or injuries of any kind that may be sustained as the result of the Village's review, approval or denial of any plans or failure to review any plans for the Property or the Development, or the issuance of any approvals, permits, certificates or acceptances for the development or use of the Property or the Development, and that the Village's review and approval of those plans and the Development and issuance of those approvals, permits, certificates or acceptances does not, and shall not, in any way be deemed to insure the Developer, or any of its heirs, successors, assigns, tenants, invitees and licensees, or any other person, against damage or injury of any kind at any time.

D. Village Procedure. The Developer has been advised by the Village that notices, meetings and hearings have been properly given and held by the Village with respect to the approval of this Agreement, and the Developer agrees not to challenge the Village's approval of this Agreement on the grounds of any procedural infirmity or of any denial of any procedural right.

E. Indemnity and Defense Expense. The Developer undertakes and assumes all potential liability for any injuries, deaths, losses, damages, claims or judgments of any nature whatsoever resulting from or in connection with its/their redevelopment activities at the Property, and the Developer shall hold harmless, indemnify and defend the Village against any such losses, except to the extent that the same is caused by the negligence or willful misconduct of the Village or its elected and appointed officials, officers, employees, agents, contractors and representatives, or by the breach of this Agreement by the Village.

1. Developer Defense Expense. The Developer shall, and does, agree to pay all reasonable expenses incurred by the Village, the Village's Corporate Authorities, and all Village elected and appointed officials, officers, employees, agents, contractors and representatives in defending against any and all claims, demands, causes of action, investigations, lawsuits, proceedings, liabilities, actions or penalties of any kind that may, at any time, be asserted against any of the Parties by any person(s) in connection with the Development, the approval of this Agreement, any terms or provisions of this Agreement, or the Developer's duties, obligations and performance under this Agreement, including, without limitation, any claims, demands, causes of action, investigations, lawsuits, proceedings, liabilities, actions or penalties related to or associated with environmental conditions, matters or contaminants concerning or relating to the Property, in each case,

except to the extent caused by the negligence or willful misconduct of the Village or its elected and appointed officials, officers, employees, agents, contractors and representatives. These expenses shall include, without limitation, all reasonable out-of-pocket expenses, such as attorneys' and experts' fees and other litigation costs.

2. Mutual Indemnification. Each Party shall indemnify, hold harmless and defend the other Party and their respective officers, employees, agents, contractors and representatives against all injuries, deaths, losses, damages, claims, suits, liabilities, liens, including mechanic's liens, judgments, costs and expenses, including reasonable attorney fees, which may in any way arise from or accrue against the other Party as a consequence of this Agreement or which may in any way result therefrom, other than those indemnified matters which arise from or relate to the negligence or willful misconduct of the other Party or its officials, officers, employees, agents, contractors and representatives. The provisions of this Subsection and any other indemnification obligations on the part of either Party shall survive the termination or expiration of this Agreement for a period of two (2) years. In any such action against either Party, the other Party shall, at its own expense, appear, defend and pay all charges of reasonable attorney fees and all reasonable costs and other reasonable expenses arising therefrom or incurred in connection therewith; and, if any judgment shall be rendered against the Party in any such action, the other Party shall, at its own expense, satisfy and discharge such judgment. The prevailing Party shall indemnify the other Party for any costs, including reasonable attorney fees, in enforcing the provisions of this Agreement.

SECTION 16. DEFAULT; CURE.

In addition to any other "Event of Default" identified in this Agreement, an "**Event of Default**" shall mean a failure on the part of either Party to comply with any material term, representation, warranty, covenant, agreement or condition of this Agreement, which failure is not cured within thirty (30) calendar days after written notice thereof; provided, however, if the failure is of a nature that it cannot be cured within thirty (30) days, then the defaulting Party shall have such additional time as is reasonably necessary to cure such failure so long as the defaulting Party commences activities designed or intended to cure such Event of Default within such thirty (30) calendar day period and thereafter diligently pursues activities designed or intended to cure such Event of Default to completion. Upon an Event of Default by the Village in the performance of any of its obligations under this Agreement, the Developer's remedies shall include specific performance (including statutory interest on any sums deemed to be improperly withheld), and any and all rights and remedies available to the Developer at law or in equity, including termination of this Agreement. The Village shall not be liable for punitive damages, consequential damages or lost profits. Upon an Event of Default by the Developer in the performance of any of its obligations under this Agreement, the Village shall be entitled to take such action as authorized by this Agreement and pursue any other remedies available at law or in equity; provided, however, that the Developer shall in no event be liable for punitive or consequential damages. Notwithstanding anything to the contrary in this Agreement, the Developer's defaults, and the Village's remedies upon such defaults, described in **Subsections 3.A.** and **5.E.** and shall be only as expressly set forth in **Subsection 3.A.** and **5.E.**, respectively.

SECTION 17. GENERAL PROVISIONS.

A. **Notice.** Any notice or communication required or permitted to be given under this Agreement shall be in writing and shall be delivered: (i) personally; (ii) by a reputable overnight

courier; (iii) by certified mail, return receipt requested, and deposited in the U.S. Mail, postage prepaid; or (iv) by electronic internet mail ("Email"). Email notices shall be deemed valid only to the extent that they are: (a) opened by the recipient on a business day at the address set forth below; and (b) followed by delivery of actual notice in the manner described in either (i), (ii) or (iii) above within three (3) business days thereafter at the appropriate address set forth below. Unless otherwise provided in this Agreement, notices shall be deemed received after the first to occur of: (a) the date of actual receipt; or (b) the date that is one (1) business day after deposit with an overnight courier as evidenced by a receipt of deposit; or (c) the date that is three (3) business days after deposit in the U.S. Mail, as evidenced by a return receipt. By notice complying with the requirements of this **Subsection 17.A.**, each Party to this Agreement shall have the right to change the address or the addressee, or both, for all future notices and communications to them, but no notice of a change of addressee or address shall be effective until actually received.

Notices and communications to the Village shall be addressed to, and delivered at, the following addresses:

Ellen Baer Village Manager Village of Western Springs 740 Hillgrove Avenue Western Springs, Illinois 60558 Direct: 708.246.1800 Email: ebaer@wsprings.com	With a copy to: Michael T. Jurusik, Esq. Klein, Thorpe and Jenkins, Ltd. 900 Oakmont Lane, Suite 301 Westmont, Illinois 60559 Cell Number: 708.638.0355 Email: mtjurusik@ktjlaw.com

Notices and communications to the Developer shall be addressed to, and delivered at, the following addresses:

Paul McNaughton McNaughton Development, LLC 11S220 Jackson Street Burr Ridge, Illinois 60527 Direct: 630.325.4048 Email: pmcnaughton83@yahoo.com	With a copy to: James E. Olguin, Esq. 16101 South 108th Avenue, 1st Floor Orland Park, Illinois 60467 Direct: 630.403.8003 Email: jim@olguinlawllc.com

B. **Time of the Essence.** Time is of the essence in the performance of this Agreement.

C. **Rights Cumulative.** Unless expressly provided to the contrary in this Agreement, each and every one of the rights, remedies and benefits provided by this Agreement shall be cumulative and shall not be exclusive of any other rights, remedies and benefits allowed by law.

D. **Non-Waiver.** The Village shall be under no obligation to exercise any of the rights granted to it in this Agreement. The failure of the Village to exercise at any time any right granted to the Village shall not be deemed or construed to be a waiver of that right, nor shall the failure void or affect the Village's right to enforce that right or any other right.

E. **Consents**. Unless otherwise provided in this Agreement, whenever the consent, permission, authorization, approval, acknowledgement, or similar indication of consent of any Party to this Agreement, or of any duly authorized officer, employee, agent, or representative of any Party to this Agreement, is required in this Agreement, the consent, permission, authorization, approval, acknowledgement, or similar indication of consent will be in writing. The Property Owner has further

executed a "Written Consent of the Property Owner" to allow the Developer to enter into this Agreement, a copy of which is attached hereto as **Exhibit "I"** and made a part hereof.

F. **Facilitation of Agreement**. The Village and the Developer will act in good faith and in a reasonable and cooperative manner with respect to consents, approvals, and other matters contemplated under this Agreement. No consent or approval may be unreasonably delayed, conditioned, or withheld. The Village and the Developer will execute, acknowledge, and deliver reasonable documents and other instruments necessary to fully carry out the terms of this Agreement.

G. **Governing Law.** This Agreement shall be governed by, and enforced in accordance with, the laws of the State of Illinois.

H. **Severability.** It is the intent of the Parties that, should any provision, covenant, agreement or portion of this Agreement or its application to any person or property be held invalid by a court of competent jurisdiction, the remaining provisions of this Agreement and the validity, enforceability and application to any person or property shall not be impaired thereby, but the remaining provisions shall be interpreted, applied and enforced so as to achieve, as near as may be, the purpose and intent of this Agreement to the greatest extent permitted by applicable law.

I. **Entire Agreement.** This Agreement constitutes the entire agreement between the Parties and supersedes any and all prior agreements and negotiations between the Parties, whether written or oral, relating to the subject matter of this Agreement.

J. **Interpretation.** This Agreement shall be construed without regard to the identity of the Party who drafted the various provisions of this Agreement. Moreover, each and every provision of this Agreement shall be construed as though all Parties to this Agreement participated equally in the drafting of this Agreement. As a result of the foregoing, any rule or construction that a document is to be construed against the drafting Party shall not be applicable to this Agreement.

K. **Amendments and Modifications.** No amendment or modification to this Agreement shall be effective until it is reduced to writing and approved and executed by all Parties to this Agreement in accordance with all applicable statutory procedures.

L. **Authority to Execute.** The Village warrants and represents to the Developer that the persons executing this Agreement on its behalf have been properly authorized to do so by the Corporate Authorities of the Village. The Developer warrants and represents to the Village that: (i) the Developer has the full and complete right, power and authority to enter into this Agreement and to agree to the terms, provisions and conditions set forth in this Agreement and to bind the Property as set forth in this Agreement; (ii) all legal actions needed to authorize the execution, delivery and performance of this Agreement by the Developer have been taken; and (iii) neither the execution of this Agreement nor the performance of the obligations assumed by the Developer will: (a) result in a breach or default under any agreement to which the Developer is a party or to which it or the Property is bound; or (b) violate any statute, law, restriction, court order or agreement to which the Developer or the Property are subject.

M. **No Third-Party Beneficiaries/No Joint Venture.** Nothing in this Agreement, whether expressed or implied, is intended to confer any rights or remedies under or by reason of this Agreement on any other entity other than the Village and the Developer, nor is anything in this Agreement intended to relieve or discharge the obligation or liability of any third persons to either the Village or the Developer, nor shall any provision give any third parties any rights or subrogation or action over or against either the

Village or the Developer. This Agreement is not intended to and does not create any third-party beneficiary rights whatsoever. Nothing in this Agreement, or any actions of the Parties to this Agreement, shall be construed by the Parties or any third-party person to create the relationship of a partnership, agency or joint venture between or among such Parties.

N. **Force Majeure**. Either Party will be temporarily excused from the performance of its obligations under this Agreement when and to the extent the non-performing Party's performance is delayed or prevented by any circumstances beyond the non-performing Party's control, including but not limited to fire, flood, explosion, epidemic, pandemic, strikes or other labor disputes, acts of God or public emergency, war, rioting, malicious damage, acts or omission of any governmental authority, delay or failure or shortage of any type of transportation, equipment or service from a public utility needed for their performance or action or omission of the other Party (collectively, "Force Majeure"), provided that:

a. The non-performing Party gives the other Party reasonably prompt written notice describing the particulars of Force Majeure including, but not limited to, the nature of the occurrence, and continues to furnish timely reports with respect thereto during the period of Force Majeure;
b. The excuse of performance is of no greater scope and of no longer duration than is required by Force Majeure;
c. No obligations of either Party that arose before Force Majeure causing the excuse of performance are excused as a result of Force Majeure; and
d. The non-performing Party uses commercially reasonable and diligent efforts to remedy its inability to perform.

Economic hardship or other financial considerations, including but not limited to increases in the costs of construction materials, equipment or construction labor, of the Developer will not constitute an event of Force Majeure.

O. **Counterparts.** This Agreement may be executed in counterparts, each of which shall constitute an original document, which together shall constitute one and the same instrument.

P. **Enforcement of Agreement.** The provisions of this Agreement shall be enforceable in any action in law or in chancery. The Parties hereto agree that any legal action to enforce any right or obligation contained in or arising out of this Agreement shall be brought in the Circuit Court of Cook County, Illinois.

Q. **Exhibits.** The following Exhibits are attached hereto and made a part hereof or incorporated herein by reference and made a part hereof:

Exhibit "A":	Site Plan for the Development, Revised as of January 27, 2025 (attached)
Exhibit "B":	"Approval Ordinance": Western Springs Ordinance No. 25-_____ approving a Conditional Use Permit for Planned Development for the Construction and Operation of the Development with Conditions (attached)
Exhibit "C":	Legal Description of the Property (attached)
Exhibit "D":	Final Development Plans (to be attached after Village Board approval)
Exhibit "E":	Construction Schedule (attached)
Group Exhibit "F":	**Confidential** Developer Letter of funding sources for completion of the Development and Supporting Submittals and Developer's Lender's

	Financing Commitment Letter issued by _____ Bank and dated _____, 2025 (not attached; on file with the Village Clerk's Office)
Exhibit "G":	Operations and Maintenance Manual and Specifications and Maintenance Schedule for Stormwater Conveyance System
Exhibit "H":	Forms of Letters of Credit (attached)
Exhibit "I":	Written Consent of the Property Owner to Allow Developer to Enter into Redevelopment and Maintenance Agreement (attached)

In the event of a conflict between an Exhibit and the text of this Agreement, the text of this Agreement shall control.

R. **Estoppels.** Within ten (10) business days following request by either Party from time to time, the other Party shall execute and deliver to the requesting Party an estoppel certificate that certifies: (i) that this Agreement is unmodified and in full force and effect or, if there had been modifications, that this Agreement is in full force and effect as modified, (ii) that the Party is not in default of this Agreement or specifying any defaults, and (iii) such other information that may be reasonably requested by the Party.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the dates set forth below, and the date of the last signatory below shall be inserted on page 1 of this Agreement, as the Effective Date of this Agreement.

APPLICATION FOR DEVELOPMENT APPROVAL AND ZONING RELIEF;

MAP AMENDMENT AND CONDITION USE PERMIT FOR PLANNED DEVELOPMENT

To: Heather Valone
Director of Community Development
Village of Western Springs
4353 Wolf Road
Western Springs, IL 60558

By: Paul R. McNaughton
John Barry
McNaughton Development, LLC
11S220 Jackson Street
Burr Ridge, Illinois 60527

Project Summary: McNaughton Development LLC, as the contract purchaser of the property at 5600 S. Wolf Road in Western Springs is making the following application to allow for the demolition of the existing underutilized office building and its associated parking lots and for the construction of twenty-nine new three-story townhome units. The current 24,000 square foot office building and the parking lot sit on two parcels of land that total 2.414 acres. The final development will also include 0.341 acre of land currently owned by the village as a previous right-of-way for Lawn Avenue. This Lawn Area right-of-way is currently being maintained by the Heritage Estates Townhome Association as a detention facility. The Heritage Crossing townhome development would require the vacation of the Lawn Avenue right-of-way and the consolidation of it and the two existing parcels creating a 2.755-acre parcel to be rezoned under a Planned Development with an underlaying zoning district of R4 – Multi Family Residence District.

Applicant: McNaughton Development LLC, will be the owner and general contractor for the new twenty-nine three-story for sale townhome units within the Heritage Crossing development.

Subject Property Address: 5600 S. Wolf Road, Western Springs, Illinois 60558

Legal Description:

PARCEL 1: THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION BEING A SUBDIVISION OF THE EAST 473 FEET OF THE NORTH 775.5 FEET (EXCEPT THE EAST 145.2 FEET OF THE WEST 178.2 FEET OF THE NORTH 350 FEET THEREOF) OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, IN COOK COUNTY, ILLINOIS.

PARCEL 2: LOT 1 IN VIAL'S FAIRWAY, A SUBDIVISION OF PART OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, ACCORDING TO THE PLAT RECORDED APRIL 17, 1957 AS DOCUMENT 16879637 IN COOK COUNTY, ILLINOIS.

LAWN AVENUE: THAT PART OF THE 66 FEET WIDE VACATED LAWN AVENUE (VACATED PER DOCUMENT NO. 96138577), LYING SOUTH OF THE NORTH LINE OF WESTERN SPRINGS TOWNHOMES, RECORDED MARCH 29, 1999, AS DOCUMENT NO. 99297584, LYING NORTH OF THE SOUTH LINE OF RIDGEWOOD UNIT 12, RECORDED OCTOBER 6, 1965, AS DOCUMENT NO. 19610359, LYING WEST OF THE EAST LINE OF THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION, RECORDED NOVEMBER 13, 1948, AS DOCUMENT NO. 14442019, AND LYING EAST OF THE WEST LINE OF RIDGEWOOD UNIT NO. 11, RECORDED APRIL 3, 1964, AS DOCUMENT NO. 19089916, IN THE EAST HALF OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, COOK COUNTY, ILLINOIS.

PIN:

PARCEL 1:	18-18-200-038
PARCEL 2:	18-18-200-017
LAWN AVENUE RIGHT-OF-WAY:	18-18-200-001

Lot Size: Approximately 2.755 Acres

Current Zoning District:

PARCELS 1 & 2: O – Limited Office District
LAWN AVENUE
RIGHT-OF-WAY: R4PUD – Residential Planned Unit Development

Zoning Approval & Relief Requested:
Comprehensive Land Use Plan Amendment: Amend the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre).

Zoning Map Amendment: Amend to rezone the property to R4 – Multiple Family Residence District (Chapter 10-6-5) allowing for a permitted use of multi-family dwellings not exceeding six (6) dwelling units per building

Plat of Consolidation: Approval of a Plat of Consolidation that will result in creating a parcel of 2.755 acres which is less than the five-acre minimum requirement within the R4 - Multiple Family Residence District and the Planned Development

Resubdivision: Approval of a Plat of Resubdivision (10-10-3) to allow for the construction of twenty-nine townhome units, a stormwater detention facility and a private road

Conditional Use for a Planned Development: Approval of Conditional Use for a Plan Development with requested deviations from the R4 – Multi Family Residence District as reflected in the following exhibits.

Vacation of Right-of-Way: Approval of the Vacation of the existing Lawn Avenue as depicted in the preceding legal description and included in the following plat of consolidation.

PROJECT NARRATIVE DESCRIPTION
McNaughton Development LLC is the contract purchaser and Casey & Fran Gaik are the owners of the property located at 5600 S. Wolf Road, Western Springs. The property is currently zoned O – Limited Office District. It is one of just five properties within the Village of Western Springs with this zoning designation. The site is improved with a 24,000 square foot office building with its associated parking lots. The property, originally developed as a private school in the 1960's was later converted into and expanded for its current office use in the early 1990's. In recent years the tenant base has vacated the property to the point where the building is at five percent occupancy due to the building's obsolescence. The owners have aggressively marketed the property to other prospective tenants with no success. In addition, it has not been attractive to owner users for any other permitted or conditional use under the O – Limited Office District. It was then decided by the owner, at the suggestion of their real estate broker, that after great effort, the property value would most likely be found in redevelopment for multi-family residential use.

The proposed multi-family residential use will continue to provide for an orderly zoning transition from the intersection of 55th Street and Wolf Road. The existing zoning classification at that corner is C2 – Community Shopping District surrounded by a small A – Single Family Residence parcel

improved with a ComEd facility, a R4 – Multi-Family Residence District improved with condominium units and a R4 – Multi-Family Residence District Planned development improved with townhome units.

The proposed zoning request would permit the resubdivision of and the redevelopment of the property into twenty-nine three-story townhome units. The twenty-nine units will be constructed in eight different buildings ranging from duplex units to four, five and six wide unit buildings. The units will be three stories tall with a two-car garage and recreation room on the ground level, the main living areas on the middle level and the bedrooms on the third level. There are no roof top deck options being offered at this time. The buildings will be 38 feet tall as measured from the proposed final grade to the midpoint of the roof. The living area within the units will range from 2,400 to 2,600 square feet. All of the units will have three bedrooms, two full and two one-half bathrooms and two-car garages. None of the units will have a basement.

The property will have two access points with one at Park Place west of Wolf Road and a second, controlled access via the existing terminus of Heritage Court to the north of the site. The current access to Wolf Road is being eliminated due to a conflict with the current deceleration lane approach to Park Place, conflicts with entrance spacing between the condominium development and Park Place, and the county highway department's preference to eliminate curb cuts along minor arterial roadways such as Wolf Road. By offsetting the access to Park Place, providing entry monumentation and proposing offsite landscaping site access has been proposed in such a way to lessen the impact on the current property owners along the south side of Park Place. A preliminary application was made to the Cook County Highway Department and their response noted that they agreed with the above noted reasoning for the applicant's decision to provide access from Park Place and not directly from Wolf Road. The controlled access point to the north will be improved with four-foot heigh decorative aluminum operable gate. The gate will prevent cut through traffic from eastbound 55th Street to southbound Wolf Road. Gate access will be granted solely to the current fourteen residents along Heritage Court and the prospective twenty-nine residents of this proposed development. Emergency services will also be granted access to the gate.

The property will comply with the stormwater ordinances of both the Metropolitan Water Reclamation District (MWRD) and the Village of Western Springs. The proposed redevelopment will result in a reduction in the site's impervious surface as compared to the existing conditions, volume control storage and stormwater detention storage. The applicant is aware of the downstream flooding issue that are a result of approximately one hundred eighty acres of undetained stormwater from the LaGrange Highlands area east of Wolf Road which is directed through this site and ultimately reaching Flagg Creek. The proposed development will have no detrimental effect to downstream owners and the stormwater improvements will provide for marginal improvements to the area.

The proposed development is a for sale townhome development with private improvements that will be managed by its homeowner's association. The expected base purchase price is anticipated to be between $800,000.00 and $850,000.00. The exterior and interior finishes will be of the utmost quality to support the anticipated base pricing. At the same time, interior finish upgrades will be offered to the purchaser. It is anticipated that the target market will be young professionals with no or very young children and active adult move down buyers native to Western Springs and the surrounding communities. Elevator options will be possible in at least fifty percent of the units. The private improvements to be owned and maintained by the association will include the common area landscaping, stormwater improvements and the extended Heritage Crossing. Water main improvements will be turned over to Village of Western Springs and the sanitary sewer improvements to the La Grange Highlands Sanitary District.

I. PETITION FOR REQUESTED ZONING RELIEF

The applicant is requesting the following zoning relief and approvals as part of this applications:

(1) Amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre).

(2) Zoning Map Amendment

Existing Zoning and Land Use:	O – Limited Office District / 24,000 square foot office building	
Adjacent Zoning and Land Use:	**North**	C2 – Community Shopping District/ gas station and community shopping, A – Single Family Residence parcel / ComEd facility, R4 – Multi-Family Residence District / condominium units and R4 – Multi-Family Residence District Planned development / townhome units.
	South	A – Single Family Residence
	East	Unincorporated Cook County Single-Family Residence District R4
	West	A – Single Family Residence
Proposed Zoning and Land Use:	R4 – Multi Family Residence District allowing for a permitted use of multi-family dwellings not exceeding six (6) dwelling units per building	

(3) Plat of Consolidation
Approval of a Plat of Consolidation that will result in creating a parcel of 2.755 acres which is less than the five-acre minimum requirement within the R4 - Multiple Family Residence District and the Planned Development. The consolidation of the parcels will allow for an orderly redevelopment of the property, particularly as it relates to stormwater management.

(4) Resubdivision
Approval of a Final Plat of Resubdivision to allow for the construction of twenty-nine townhome units, a stormwater detention facility and a private road on a parcel of less than the five acres minimum requirement. The applicant is requesting to bypass the Resubdivision requirement to submit preliminary plans and simply request final plan approvals in light of the size of the property.

(5) Conditional Use Permit
Approval of a Conditional Use to allow for a Planned Development with the following deviations from the requirements R4 – Multi Family Residence District and per the following plans and exhibits.

R4 – Multiple Family Residence District Requirements vs Requested Relief:

Minimum Development Parcel Size
Required: 5 Acres
Requested: 2.755 Acres

Front Yard Setback
Required: Twenty-Five Feet (25)
Requested: Twenty Feet (20) Garage Face to the Closer of the Sidewalk or Curb with the permitted encroachment of the Middle Level Deck and Third Level Living Area

Interior Sideyard Yard Setback
Required: Thirty Feet (30)
Requested: Eight Feet (8) with the permitted encroachment of bay windows

Corner Sideyard Yard Setback
Required: Twenty Feet (25)
Requested: Twenty Feet (25) with the permitted encroachment of bay windows

Rear Yard Setback
Required: Thirty Feet (30)
Requested: Twenty-Five Feet (25) with the permitted encroachment of Middle and Third Level Projections and Balconies

Multiple – Family Dwelling Height
Required: Thirty-Five (35) Feet
Requested: Thirty-Eight (38) Feet

Maximum Building FAR
Required: 54,311.51 SF
Requested: 126,008.40 SF

Vacation of Right-of-Way

Approval of the vacation of the 0.341 acre of land currently owned by the village as a previous right-of-way for Lawn Avenue. The applicant is requesting that the acquisition cost of this vacation be made at no cost to the applicant. The applicant feels that its offer to make stormwater improvements to the site, including to the detention facility, and its commitment and its successors commitment of perpetual care and maintenance is sufficient compensation.

(1) MAP AMENDMENT STANDARDS

Pursuant to Section 10-3-12(F)(1) (Map Amendments) of the DCO, the Applicant must provide the information relative to each of the Standards that are to be used by the Plan Commission and the Village Board to evaluate the suitability of a map amendment.

a. Existing uses of property within the general area of the property in question. The property is currently zoned O – Limited Office District and is along Wolf Road which is under the jurisdiction of the Cook County Highway Department.

North Parcels: Gas station and community shopping, ComEd facility, condominium units and townhome units.

East Parcels: Unincorporated Cook County Single-Family Residence District R4

South & West Parcels: Single Family Home

b. The zoning classification of property within the general area of the property in question.

North Parcels:
C2 – Community Shopping District
A – Single Family Residence
R4 – Multi-Family Residence District
R4 – Multi-Family Residence District Planned Development.

East Parcels: Unincorporated Cook County Single-Family Residence District R4

South & West Parcels: A- Single Family Residence

c. The suitability of the property in question to the uses permitted under the existing zoning classification.

The property is not suitable for uses permitted under the O – Limited Office District. This zoning district permits for professional offices, including, but not limited to, offices for attorneys, physicians, dentists, architects, consulting engineers, insurance agents, and village government offices. This use has proven to have failed in light of the current building occupancy being at 5% for an extended period of time. The zoning district does permit for multi-family however, when placed on the second floor of the other permitted uses within the development.

d. **The trend of development, if any, in the general area of the property in question, including changes, if any, which have taken place in its present zoning classification.**

The trend of development is for multi-family residential construction. In fact, the existing office building is not compatible to the trend of development. The existing office uses and commercial developments are all located along 55th Street. Wolf Road in the southwest portion of Western Springs is dominated by residential development. This property is bounded of the north with a three-story condominium building and two-story townhomes. Due to the unique shape of this parcel and its size, the continuation of a multi-family product is an appropriate transition to the single-family development to the west and south

e. **The suitability of the property in question for permitted uses listed in the proposed zoning classification.**

The property is suitable for the uses within the R4 – Multi-Family Residence District Planned Development.

The compatibility of the surrounding property with the permitted uses listed in the proposed zoning classification.

Being residential in nature, the proposed R4 – Multi-Family Residence District Planned Development is compatible with the surrounding residential uses.

The objectives of the current comprehensive plan for the village and the impact of the proposed amendment on the said objectives.

The applicant is requesting an amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre). This amendment will not result in any detrimental effects within the village or the neighborhood. The amendment will allow for the demolition of an underperforming building, orderly redevelopment of the site providing a positive tax generating use for the village, school districts and other taxing bodies.

(2) CONDITIONAL USE PERMIT STANDARDS

Pursuant to Section 10-3-14(G) of the DCO, the following Standards need to be satisfied in order for the Village Board to approve the Conditional Use Permit establishing the Planned Development.

1. **That the establishment, maintenance, or operation of the conditional use will not be detrimental to, or endanger the public health, safety, morals, comfort, or general welfare.**

The granting of the conditional use permit to allow for a R4 – Multi-Family Residence District Planned Development on a site less than 5 acres will not be detrimental to or, endanger the public health, safety, morals, comfort or general welfare or injurious to other nearby property or improvements. The proposed conditional use permit will allow for the development of a well-designed townhome development that reduces current impervious services and provides storm management facilities which results in downstream benefits. According to

a traffic study prepared by KLOA, no significant negative impacts on the surrounding road network would result from the development. Given the foregoing, granting the conditional use permit will not be detrimental to the public welfare or injurious to other property or improvements in the neighborhood in which the property is located.

2. **That the conditional use will not be injurious to the uses and enjoyment of other property in the immediate vicinity for the purposes already permitted, nor substantially diminish and impair property values within the neighborhood in which it is to be located.**

The proposed conditional use will allow a well-designed townhome development that minimizes impact on natural areas and is well separated from existing development with the use of landscaping fencing and setbacks. Setbacks within the development allow adequate light and air while preserving views across the site. Density is consistent with surrounding multi-family developments and according to a traffic study prepared by KLOA, no substantial impact on the surrounding street system is anticipated. Site engineering is designed to reduced impervious surfaces, preserve natural topography and existing drainage patterns and enhance the stormwater management facilities on-site so as to provide marginal improvements to the overall area.

As represented in the applicant's materials, a fiscal analysis indicates a positive impact on property values and real estate taxes. Given the foregoing, the proposed conditional use permit will not impair an adequate supply of light and air to adjacent property or substantially increase the congestion of the public streets, or increase the danger of fire, or impair natural drainage or create drainage problems on adjacent properties, or endanger the public safety, or substantially diminish or impair property values within the neighborhood.

3. **That the establishment of the conditional use will not impede the normal and orderly development and improvement of the surrounding property for uses permitted in the district.**

The subject property is in an immediate area dominated by commercial development, multi-story attached single family, attached single family and detached single-family residential development. The anticipated density of the proposed development is consistent with the requested comprehensive plan amendment and is appropriate in light of the intensity of the surrounding uses and the local roadway system.

Given the foregoing, the proposed development will not impede the normal and orderly development of surrounding property but will in fact be complimentary to existing and future uses.

Those adequate public utilities, access roads, drainage and/or necessary facilities have been or will be provided.

There is an adequate supply of public utilities in the vicinity of the property. The property can be served easily by public sewer and public water. The development will cause no substantial impact on the surrounding street system. Site

engineering is designed to reduced impervious surfaces, preserve natural topography and existing drainage patterns and enhance the stormwater management facilities on-site so to provide marginal improvements to the overall area.

4. **That adequate measures have been or will be taken to provide ingress and egress so designed as to minimize traffic congestion in the public streets.**

The property will have two access points with one at Park Place west of Wolf Road and a second, controlled access via the existing terminus of Heritage Court to the north of the site. The current access to Wolf Road is being eliminated due to a conflict with the current deceleration lane approach to Park Place, conflicts with entrance spacing between the condominium development and Park Place and the county highway department's preference to eliminate curb cuts along minor arterial roadways such as Wolf Road. The access to Park Place has been engineered in such a way to lessen the impact on the current property owners along the south side of Park Place.

The controlled access point to the north will be improved with four-foot heigh decorative aluminum operable gate. The gate will prevent cut through traffic from eastbound 55th Street to southbound Wolf Road. Gate access will be granted solely to the current fourteen residents along Heritage Court and the prospective twenty-nine residents of this proposed development. Emergency services will also be granted access to the gate.

According to a traffic study prepared by KLOA, no substantial impact on the surrounding street system is anticipated.

5. **That the proposed conditional use is not contrary to the objectives of the current comprehensive plan for the Village of Western Springs.**

The applicant is requesting an amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre). However, the proposed amendment and the proposed plan do meet the goals set forth in the of the Comprehensive Land Use Plan for residential areas. The proposal enhances and protects the overall single family residential feel of the village. The product provides variety in housing types available in the village to entice new residents to the village and also allow for long-term residents to remain in the community. The proposal is compatible with the commercial and multi-family uses to the north and provides for an orderly transition to the south and west.

6. **That the conditional use shall, in all other respects, conform to the applicable regulations of the district in which it is located, except as such regulations may, in each instance, be modified pursuant to the recommendations of the plan commission and approved by the village board.**

The proposed development will conform with the R4 – Multi-Family Residence District except for the requested deviations requested for approval by the Village Board.

(3) ADDITIONAL SUBMITTAL REQUIREMENTS

Pursuant to DCO 10-8-8, the Applicant would like to specifically address the following submittal requirements.

3. Project Design Features:

a. A detailed site plan has been provided illustrating street and pedestrian ways, typical building layouts, setbacks building heights, open spaces and site data

b. Final engineering plans are provided with complete topographical information and stormwater calculations

c. Final engineering plans are provided indicating the feasibility of providing utility service to the site via water mains, sanitary, and storm sewers and storm water detention facilities.

d. Final landscape plans are provided depicting project signage. Project marketing signage has not been developed as of this submittal. Any public facing signage shall be submitted for review to village staff for comment and approval.

e. Final landscape plans are provided indicating the location, number and desired effect of proposed landscaping.

f. Character elevations are provided along with floor plans and exterior color pallets

g. Final engineering plans are provided indicating street lighting

h. Final engineering plans are provided including a sediment and erosion control plan indicating methods to control erosion and sedimentation on and adjacent to the site.

4. Other Requirements: Applications for planned developments shall also include the submission of the following:

a. Fiscal impact study has been provided by the applicant illustrating the impact of the development on the Village of Western Springs and School Districts 106 & 204

b. Fiscal impact study has been provided by the applicant illustrating the impact of the development on the school districts from a fiscal and population standpoint

c. Traffic impact study has been provided by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA)

d. The applicant has provided comparable sales research and a letter from a local real estate professional in lieu of a full market study report.

e. Final engineering plans are provided indicating how construction activity will be controlled by addressing contractor ingress/egress, construction parking, street cleaning and pest control.

f. The applicant has a forty-year track record of custom development and construction will provide financial references upon request.

g. Proposed covenants are provided.

i. The applicant is a contract purchaser of the property and has included a letter from the owner authorizing the applicant to make this application.

j. Notification list for public hearing to be provided by the village.

k. Development schedule.
- Application submittal 5/10/2024
- Community meeting 6/5/2024
- Plan Commission meeting 6/19/2024

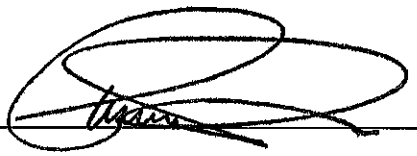
l. Final engineering plans are provided with this submittal, which complies with of all applicable plans and materials required in Chapter 11 of this Ordinance, "Flood Plain and Storm Water Management".

DEVELOPER/BUILER & PROJECT TEAM INFORMATION

McNaughton Development LLC is a custom home builder and land development company that builds architecturally exciting high-end, distinctive homes. It has extensive experience in the construction of high-end residential product. It has developed numerous properties from one to three hundred acres. McNaughton Development is a family owned and operated company that is deeply rooted in Chicagoland area since 1981 and believes that a custom home is the product of the customers ideas and dreams and our commitment to making it a reality.

DesignTek Engineering has been an established civil engineering design and consulting firm servicing the Chicagoland region, surrounding suburbs, and northwest Indiana for over 20 years. Founded in 2003, DesignTek has expanded its services and client base by providing personalized attention to the needs and expectations of their clients. Their team of professional engineers, surveyors, and support staff tackle a wide variety of diverse projects in all fields of land development including residential, commercial, industrial, institutional, and municipal projects.



BSB Design, founded in 1966 by Jack Bloodgood, began as a one-man shop operating out of a barn in Des Moines, Iowa. Today, it has grown into a renowned architectural and design firm,

making an impact on much more than just the single-family home market. With offices coast to coast, they offer national experience with regional sensitivity. As a preeminent design firm, it has leveraged its unique abilities to see the future more clearly and to create environments that transform lives.

Kenig, Lindgren, O'Hara, Aboona, Inc. was formed in 1995 by Neil Kenig, Gerald Lindgren, Donald O'Hara and Luay Aboona. Today, Luay Aboona continues with his partner Michael Werthmann to lead the firm in providing quality traffic, transportation, and parking consulting services to its clients. KLOA, Inc.'s staff of transportation engineers and planners represent over 150 years of professional experience. Their high standards, commitment to the industry, and concern for each client assure the KLOA, Inc. mission to provide superior service in a timely and cost-effective manner. They approach each project as a special assignment that requires critical analysis, detailed research, creative thinking, and communicative interaction to develop practical solutions.

VII. CONCLUSION

McNaughton Development LLC is pleased to submit this application and is confident, with the approval of the village board, that the development will be an excellent addition to the Village of Western Springs.

EASEMENT PROVISIONS

Easements are hereby reserved for and granted to the Village of Orland Park, Illinois and to those public utility companies operating under franchise from the Village of Orland Park, including, but not limited to Ameritech, Northern Illinois Gas Company (NICOR), Commonwealth Edison Company, Cable Television and their successors and assigns, over all the areas marked "Public Utilities and Drainage Easement" (P.U. & D.E.) on the plat for the perpetual right, privilege and authority to construct, reconstruct, repair, inspect, maintain and operate various utility transmission and distribution systems, community antenna television systems and including storm and/or sanitary sewers, together with any and all necessary manholes, catch basins, connections, appliances and other structures and appurtenances as may be deemed necessary by said village, over, upon, along, under and through said indicated easements, together with right of access across the property for necessary men and equipment to do any of the above work.

No right is also granted to trim or remove trees, shrubs or other plants on the easements that interfere with the operation of the sewers or other utilities. No permanent buildings shall be placed on said easements, but same may be used for gardens, shrubs, landscaping and other purposes that do not harm or later interfere with the aforesaid uses or rights, where an easement is used both for sewers and other utilities, the other utility installation shall be subject to the ordinances of the Village of Orland Park.

Easements are hereby reserved for and granted to the Village of Orland Park and other governmental authorities having jurisdiction of the land platted hereon over the entire easement area for ingress, egress and the performance of municipal and other governmental services, including water, storm, and sanitary sewer services and maintenance.

NICOR GAS COMPANY

AN EASEMENT IS HEREBY RESERVED FOR AND GRANTED TO NORTHERN ILLINOIS GAS COMPANY, ITS SUCCESSORS AND ASSIGNS ("NI-GAS") TO INSTALL, OPERATE, MAINTAIN, REPAIR, REPLACE AND REMOVE FACILITIES USED IN CONNECTION WITH THE TRANSMISSION AND DISTRIBUTION OF NATURAL GAS IN, OVER, UNDER, ACROSS, ALONG AND UPON THE SURFACE OF THE PROPERTY SHOWN ON THIS PLAT MARKED "EASEMENT," "COMMON AREA OR AREAS" AND STREETS AND ALLEYS, WHETHER PUBLIC OR PRIVATE, AND THE PROPERTY DESIGNATED IN THE DECLARATION OF CONDOMINIUM AND/OR ON THIS PLAT AS "COMMON ELEMENTS," TOGETHER WITH THE RIGHT TO INSTALL REQUIRED SERVICE CONNECTIONS OVER OR UNDER THE SURFACE OF EACH LOT AND COMMON AREA OR AREAS TO SERVE IMPROVEMENTS THEREON, ON OR ADJACENT LOTS, AND COMMON AREA OR AREAS, AND TO SERVE OTHER PROPERTY, ADJACENT OR OTHERWISE, AND THE RIGHT TO REMOVE OBSTRUCTIONS, INCLUDING BUT NOT LIMITED TO, TREES, BUSHES, ROOTS AND FENCES, AS MAY BE REASONABLY REQUIRED INCIDENT TO THE RIGHTS HEREIN GIVEN, AND THE RIGHT TO ENTER UPON THE PROPERTY FOR ALL SUCH PURPOSES. OBSTRUCTIONS SHALL NOT BE PLACED OVER NI-GAS' FACILITIES OR IN, UPON OR OVER THE PROPERTY IDENTIFIED ON THIS PLAT FOR UTILITY PURPOSES WITHOUT THE PRIOR WRITTEN CONSENT OF NICOR. AFTER INSTALLATION OF ANY SUCH FACILITIES, THE GRADE OF THE PROPERTY SHALL NOT BE ALTERED IN A MANNER SO AS TO INTERFERE WITH THE PROPER OPERATION AND MAINTENANCE THEREOF.

THE TERM "COMMON ELEMENTS" SHALL HAVE THAT MEANING SET FORTH FOR SUCH TERM IN SECTION 605/2(e) OF THE "CONDOMINIUM PROPERTY ACT" (ILLINOIS COMPILED STATUTES, CH. 765, SEC. 605/1(e)), AS AMENDED FROM TIME TO TIME. THE TERM "COMMON AREA OR AREAS" IS DEFINED AS A LOT, PARCEL OR AREA OF REAL PROPERTY, INCLUDING REAL PROPERTY SURFACED WITH INTERIOR DRIVEWAYS AND WALKWAYS, THE BENEFICIAL USE AND ENJOYMENT OF WHICH IS RESERVED IN WHOLE AS AN APPURTENANCE TO THE SEPARATELY OWNED LOTS, PARCELS OR AREAS WITHIN THE PROPERTY, EVEN THOUGH SUCH AREAS MAY BE DESIGNED ON THIS PLAT BY OTHER TERMS.

TYPICAL SETBACK & EASEMENT DETAIL
(UNLESS OTHERWISE SHOWN)

1. ALL AREAS ARE PLUS OR MINUS.
2. ALL EASEMENTS ARE HEREBY GRANTED.
3. ALL DISTANCE ARE IN FEET AND DECIMAL PARTS THEREOF.
4. THERE SHALL BE NO INGRESS OR EGRESS FROM OUTLOT "A" TO SOUTHWEST HIGHWAY.

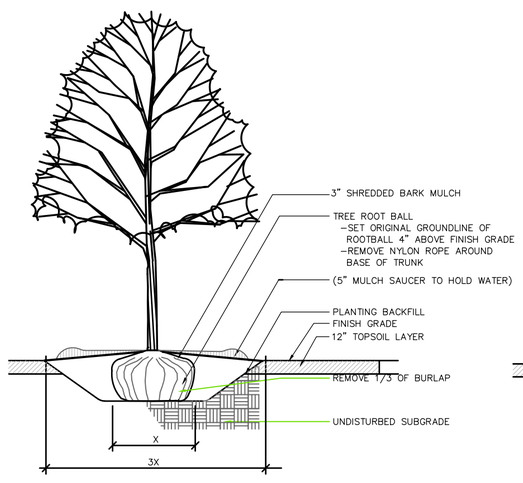
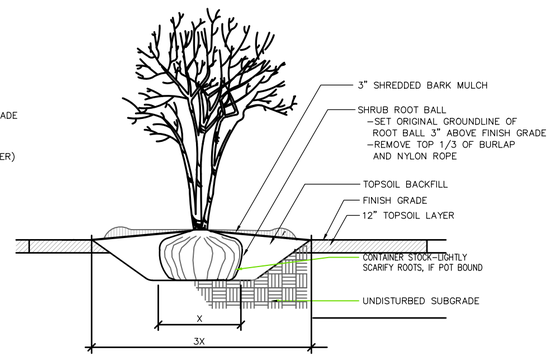
SLOPE INSTALLATION
APLICACIONES PARA TALUDES

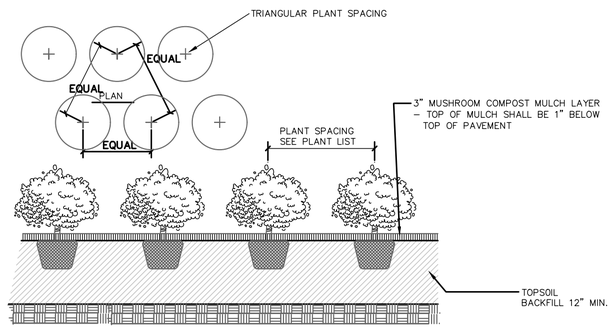
NORTH AMERICAN GREEN
EROSION CONTROL *Products* *Guaranteed* SOLUTIONS

14649 HIGHWAY 41 NORTH
EVANSVILLE, IN 47725
800-772-2040
www.nagreen.com





1. PREPARE SOIL BEFORE INSTALLING ROLLED EROSION CONTROL PRODUCTS (RECP's), INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED.
   NOTE: WHEN USING CELL-O-SEED DO NOT SEED PREPARED AREA. CELL-O-SEED MUST BE INSTALLED WITH PAPER SIDE DOWN.
2. BEGIN AT THE TOP OF THE SLOPE BY ANCHORING THE RECP's IN A 6" (15 CM) DEEP X 6" (15 CM) WIDE TRENCH WITH APPROXIMATELY 12" (30cm) OF RECP's EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE RECP's WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30 CM) APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" (30 CM) PORTION OF RECP's BACK OVER SEED AND COMPACTED SOIL. SECURE RECP's OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" (30 CM) APART ACROSS THE WIDTH OF THE RECP's.
3. ROLL THE RECP's (A.) DOWN OR (B.) HORIZONTALLY ACROSS THE SLOPE. RECP's WILL UNROLL WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL RECP's MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES IN APPROPRIATE LOCATIONS AS SHOWN IN THE STAPLE PATTERN GUIDE. WHEN USING THE DOT SYSTEM™, STAPLES/STAKES SHOULD BE PLACED THROUGH EACH OF THE COLORED DOTS CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. THE EDGES OF PARALLEL RECP's MUST BE STAPLED WITH APPROXIMATELY 2" – 5" (5 CM – 12.5 CM) OVERLAP DEPENDING ON RECP's TYPE.
5. CONSECUTIVE RECP's SPLICED DOWN THE SLOPE MUST BE PLACED END OVER END (SHINGLE STYLE) WITH AN APPROXIMATE 3" (7.5 CM) OVERLAP. STAPLE THROUGH OVERLAPPED AREA, APPROXIMATELY 12" (30 CM) APART ACROSS ENTIRE RECP's WIDTH.
   NOTE:
   *IN LOOSE SOIL CONDITIONS, THE USE OF STAPLE OR STAKE LENGTHS GREATER THAN 6" (15 CM) MAY BE NECESSARY TO PROPERLY SECURE THE RECP's.



1. PREPARE EL TERRENO ANTES DE INSTALAR LAS MANTAS, INCLUYENDO LA APLICACION DE CAL, FERTILIZANTE Y SEMILLA.
   NOTA: CUANDO ESTE USANDO CELL-O-SEED NO SIEMBRE EL AREA PREPARADA. CELL-O-SEED TIENE QUE INSTALARSE CON EL LADO DE PAPEL HACIA ABAJO.
2. COMIENCE EN LA CABECERA DEL TALUD SUJETANDO LA MANTA EN UNA ZANJA DE 6" (15 CM) DE PROFUNDIDAD FOR 6" (15 CM) DE ANCHO CON APROXIMADAMENTE 12" (30 CM) DE LA MANTA EXTENDIDA MAS ALLA DE LA PENDIENTE ALTA DE LA ZANJA. SUJETE LA MANTA AL FONDO DE LA ZANJA CON UNA LINEA DE GRAPAS O ESTACAS APROXIMADAMENTE 12" (30 CM) UNA DE LA OTRA. RELLENE Y COMPACTE LA ZANJA DESPUES DEL ENGRAPE. RIEGE LA SEMILLA EN EL SUELO COMPACTADO Y DOBLE LAS 12" (30 CM) REMANENTES DE MANTA SOBRE LA SEMILLA EL SUELO COMPACTADO. ASEGURE LA MANTA SOBRE EL SUELO CON UNA LINEA DE GRAPAS O ESTACAS APROXIMADAMENTE 12" (30 CM) UNA DE LA OTRA A TRAVES DEL ANCHO DE LA MANTA.
3. DESENROLLE LAS MANTAS (3A) HACIA ABAJO U (3B) HORIZONTALMENTE A TRAVES DEL TALUD CON EL LADO APROPIADO HACIA LA SUPERFICIE DEL SUELO. TODAS LAS MANTAS DEBERAN ASEGURARSE A LA SUPERFICIE DEL SUELO POR MEDIO DE GRAPAS O ESTACAS EN LUGARES APROPIADOS TAL Y COMO SE INDICA EN EL PATRON GUIA DE ENGRAPADO. CUANDO ESTE USANDO EL DOT SYSTEM™, LAS GRAPAS O ESTACAS DEBEN COLOCARSE A TRAVES DE CADU UNDO DE LOS PUNTOS CON COLOR CORRESPONDIENTES AL PATRON DE ENGRAPADO APROPIADO.
4. LOS BORDES DE LAS MANTAS PARALELAS TIENEN QUE ENGRAPARSE CON UN TRASLAPE DE APROXIMADAMENTE 2" – 5" (5 CM – 12.5 CM) DEPENDIENDO DEL TIPO DE MANTA.
5. MANTAS CONSECUTIVAS UNIDAS EN LA BAJADA DE LOS TALUDES, DEBEN COLOCARSE ORILLA SOBRE ORILLA (TIPO ESCALONADO) CON UN TRASLAPE DE APROXIMADAMENTE 3" (7.5 CM). ENGRAPE EL AREA TRASLAPADA CON UNA SEPARACION DE APROXIMADAMENTE 12" (30 CM) A TRAVES DE TODO EL ANCHO DE LA MANTA.

   NOTA:
   * EN CONDICIONES DE SUELTO, PUEDE QUE SE NECESITEN GRAPAS O ESTACAS DE MAS DE 6" (15 CM) DE LARGO PARA ASEGURAR LAS MANTAS CORRECTAMENTE.

REV. 01/05

LANDSCAPE SPECIFICATIONS

1.11 GENERAL LANDSCAPE NOTES

A. Unless stated otherwise herein, all seeding, sodding and landscape planting work shall be performed in accordance with the Iowa Department of Transportation (IDOT) Standard Specifications for Highway and Bridge Construction (latest edition) as specified in Section 200 (Earthwork, Landscaping and Erosion Control).

B. Unless stated herein, all materials shall meet the requirements of the following Articles of Standard the Iowa DOT Specifications for Road and Bridge Construction Section 1000 – Materials:

Item	Section
Erosion Control	2601
Furnish Install Trees Shrubs/Warranty	2611
Erosion Control Materials	4169
Landscape Plant Materials	4170

1.12 TOPSOIL/FINE GRADING

A. Approved topsoil shall be supplied and installed at the following depths:
Seeded and sodded areas – 8-12" depth
Shrub bed areas and landscaped islands – 12" depth
Groundcover/perennial areas – 12" depth (amended soil mix as shown in detail)

B. Approved topsoil shall be free of roots, noxious weed seeds, sticks, rocks or miscellaneous debris which may impair plant growth. Topsoil shall not be worked or graded while frozen or in an excessively wet or dry condition. Topsoil shall not be accessibly acidic or alkaline and shall not contain any herbicide residue. The Owner reserves the right to have representative samples of the topsoil tested by a qualified soil testing laboratory at no cost to the Owner.

C. All top-soiled areas shall be fine graded to elevations indicated on the grading plan prior to receiving sod or landscaping. All areas shall drain properly so that there are no puddles or standing water in any lawn or plant bed areas. Areas improperly graded shall be regarded at the Contractor's expense.

D. Remove rocks, stones and other foreign debris while spreading and grading. If necessary, had spread topsoil around buildings, structures, walks, drives or trees to avoid damage.

E. Where graded areas interface with non-graded undisturbed edges, remove turf along edge to create a straight smooth transition line between graded and non-graded areas. Fine grade transition area so that finis grades of graded and non graded areas are flush.

1.13 SEEDING/SODDING

A. Seeding work shall conform to Section 4169 of the IDOT Standard Specifications for Highway and Bridge Construction.

B. Seed mix for seeded turf grass areas shall be the following:

1. Type A Seed Mix (General Lawn Area). Field of Dreams Reseeder Seed Mix- Blend

25% Accent Perennial Ryegrass
25% Caddieshack Perennial Ryegrass
25% Blue Chip Kentucky Bluegrass
25% Freedom III Kentucky Bluegrass

Apply at the rate of five pounds per 1,000 SF. Supplier- National Seed Company,4720 Yender Avenue, Lisle, Illinois (630) 417-9055

C. Prior to work, submit three copies of seed vendor's certificate for grass seed mixture, indicating weight, and percentages of purity, germination and weed seed.

D. Sodding work, if provided, shall conform to Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

E. Prior to work, submit three copies of sod grower's location for approval. Sod shall be from a locally grown source. Sod shall be in healthy growing condition, free of weeds, pests and cut to the specified thickness. The Owner has the right to reject unacceptable sod at the growing site.

F. All fine grading for seeded and sodded areas shall be approved by the Owner prior to work.

G. Install seeding on prepared, finished graded areas and in favorable weather conditions within the following periods: April 1st through May 31st; and August 15th through October 15th.

H. Install sodded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

I. Fertilize seeded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction. Fertilizer shall be a 10-10-10 Max Lawn mix (or Equal) and applied to 14.4 pounds per 1,000 square feet.

J. Fertilize sodded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

K. Apply seed blanket to all lawn seeded areas per the details indicated on the drawings.

L. Guarantee all seeding and sodding work for a period of one year following final acceptance. Areas not accepted upon completion of the guarantee period shall be resodded to fill in voids and areas not covered in seed or sod.

M. Maintain seeded and sodded areas for a period of 45 days following installation. Maintenance shall consist of watering, mowing and weeding. Repair and reseed bare spots or seeded and sodded areas that have not established or have washed out due to erosion.

N. Initial mowing shall be done at a 3" cutting height so than not more than 33% of the grass is removed in a single mowing. Cutting heights on follow up mowings can be readjusted to a 2.5" grass blade height.

1.14 TREE, SHRUB AND GROUNDCOVER PLANTING

A. The Owner reserves the right to inspect all material at the nursery. Only nursery grown stock will be permitted to be used on the Project.

B. All tree, shrub and groundcover planting shall be performed between the dates of March 15 and May 31, and August 15 and October 15. Actual planting shall be performed only during periods within this season when weather and soil conditions are suitable and in accordance with locally accepted practice, as approved by the Owner's Representative.

A. Location for all trees, intermediate trees and evergreen trees shall be staked and outlines of bed areas shall be clearly marked on the ground by a qualified landscape representative of the Contractor, and shall be subject to approval by the Owner's Representative prior to commencement of planting.

B. All shrub beds shall be mulched with 3" of shredded hardwood bark mulch. Groundcover beds shall be mulched with 2" of mushroom compost. Provide shredded hardwood bark mulch rings (3" depth) for all shade and flowering trees. Diameter of mulch rings shall be equal to diameter of root ball.

C. Mulch shall comprise partially decomposed shred hardwood bark. Mulch shall be a brown-black color, and, free of oversized pieces (1/2" x4") and fine particles. Prior to work, Contractor shall submit three mulch samples for approval for use prior to work.

D. Imported topsoil, if necessary, shall consist of fertile, friable natural topsoil typical for this locality. It shall not contain a mixture of subsoil or slag and free of lumps, stones, plants and their roots, stalks and other extraneous matter and shall not be used while in a frozen or muddy condition. Topsoil shall have a pH range of 6.0-7.0 and shall not contain less than 12 percent organic matter.

E. Tree, Shrub and Groundcover Establishment Period, Inspections and Guarantees.

1. Establishment Period. For a period of 60 days after planting of trees, shrubs, and groundcovers, (not including dormancy periods), the Contractor shall properly care for all plants, and planning beds including watering, weeding fertilizing, cultivating, adjusting or bracings or other maintenance work which is necessary to keep the plants in a healthy condition and in a plumb position. All plants shall be watered as season conditions require, and as directed by the Owner, until provisional acceptance of the planting.

2. Provisional Acceptance. At the end of the Establishment period, the planting shall be inspected by the Owner for provisional acceptance of the planting. Any plant material which is dead, damaged, untrue to natural form of the species, or otherwise unhealthy, shall be replaced by the Contractor at his expense. The Owner shall accept maintenance responsibilities of the planting after the provisional acceptance.

3. Guarantee and Final Acceptance. The Contractor shall guarantee that all plants shall be in a healthy and vigorous condition one full growing season after the provisional acceptance. The planting shall be inspected by the Owner at the end of the guarantee period. Any plant material which is dead, damaged, untrue to natural for of the species, or otherwise unhealthy, shall be replaced by the Contractor at his expense.

4. Provisional acceptance and guaranteed periods of landscaped plantings may be in part or whole.
NATIVE PLANTING SPECIFICATIONS

2.0 PURPOSE

These specifications, and the plan drawing, detail the standards and procedures required to successfully establish native plant communities within and adjacent to the on-site stormwater detention basin (SDB). Upon successful establishment, the native vegetation will provide water quality benefits to the surrounding area by filtering sediments and pollutants from stormwater runoff generated on-site. Additionally, the floral diversity created by these plantings will provide a valuable source of wildlife habitat, as well as a unique and aesthetically pleasing landscape.

2.01 CONTRACTOR QUALIFICATIONS

The Native Landscape Contractor chosen for the establishment and enhancement of the natural areas must be experienced in the restoration, installation, and management of said areas. They must have a minimum of five years experience in the field. There shall be a supervisor available at all times that can identify non-native and native plants by genus and species. The goal of installing successful native plant communities is a long-term process. Therefore, it is imperative that a qualified Native Landscape Contractor perform the initial installation and maintenance.

2.02 QUALITY AND CONDITION

1. Native seed shall be obtained from sources east of the Mississippi River, within the same EPA Level III Ecoregion as the project site (Central Corn Belt Plains). Plant origins outside of the Ecoregion shall be approved by the Wetland Consultant.

2. Native seeds shall be blended by the vendor, and the mixture and ratio shall be guaranteed in writing to be as specified. The amount of seed indicated on the specifications shall mean the total amount of pure live seed (PLS) per acre for all species listed. It is the sole responsibility of the Native Landscape Contractor to provide approved seed that meets industry-standard PLS requirements.

3. Native Landscape Contractor shall provide the Wetland Consultant with the name and location of the seed supplier, origin of the various kinds of plants, and a statement of the purity of the seed.

4. Seed shall conform to applicable State and Federal regulations as in effect on the date of letting. Unless otherwise specified, seed shall not contain in excess of 1 percent weed seeds; 0 percent is desirable.

5. All storage requirements, stratification, and scarification considerations shall be the sole responsibility of the Native Landscape Contractor.

6. Mycorrhizal inoculants shall be palletized and mixed at 1 lb. per acre with the fine seeds before installation. The inoculants shall contain a diverse mixture of Glomales fungal species (Glomus spp.) in palletized form.

2.03 HANDLING

1. Native Landscape Contractor shall be solely responsible for the proper handling and storage of the seed according to the best seed handling and storage practices, including fungicide treatments and stratification considerations. Owner shall make no compensation for damage to the seed because of improper storage, cleaning, threshing, or screening operations.

2. All native seeds shall be packed and covered in such a manner as to ensure adequate protection against damage and maintain dormancy while in transit, storage, or during planting operations.

3. Seed shall be kept dry and unopened until needed for use. Seed shall not be stored or temporarily stored in locations or vehicles where the temperature will be in excess of 90 degrees F.

Table 4. Erosion Control Blanket Details
See Plans

2.04 SITE PREPARATION

1. The General Contractor and Native Landscape Contractor shall be responsible for performing all work necessary to achieve and maintain an acceptable seedbed prior to seeding. All areas must be properly prepared before seeding begins. Underground utility location maps and plans should be reviewed prior to work. Equipment having low unit pressure ground contact shall be utilized within the planting areas.

2. Unless the Landscape Architect agrees to another approach, the seedbed shall be prepared by working the topsoil to a depth of 3 inches. Site preparation equipment shall be of a design that can be utilized efficiently by the Native Landscape Contractor to meet the requirements for the work specified. The equipment proposed for use by the Native Landscape Contractor for disking and herbicide applications shall be subject to approval by the Landscape Architect.

3. Prior to seeding, at least 6 inches of topsoil shall be present and free of all clods, stones, roots, sticks, rivulets, gullies, crusting, and cracking. The soil aggregate size will be no greater than 2 inches in the largest diameter.

4. If present, compacted soils shall be disked or raked prior to seeding. Remedial measures for the access area may, at the direction of the Wetland Consultant, involve ripping from 12 to 18 inches of the soil horizon prior to disking. If compaction is not a concern and the seedbed needs to be loosened prior to seeding to ensure good seed-soil contact, disking or raking shall be performed using equipment and the approach recommended by the Native Landscape Contractor, subject to approval by the Wetland Consultant.

5. If needed, cultivation shall occur within 24 hours prior to seeding. Seeding should occur immediately after the last cultivation preferably before a rain.

FIRE STROBE 2OOO

EMERGENCY VEHICLE STROBE DETECTOR

The FIRE STROBE 2OOO provides rapid access to automatic gates and secured areas. The FIRE STROBE 2OOO opens gates when activated by an emergency vehicle equipped with the standard operational strobe. The most common frequency is (14Hz).

Now with STROBEWATCH™.

FEATURES:

RAPID DETECTION OF ANY EMERGENCY STROBE

- Fire
- Paramedics
- Police
- 911 Response Vehicles
- Double and Quad Flash Strobes
- 100% Digital

FIELD PROGRAMMABLE

- Coated Optics
- 2 Relay Outputs
- Relay Timing

EASE OF INSTALLATION

- FIRE STROBE 2OOO can be installed on any existing gate system
- Sensitive photodiode complete with PVC housing and lens assembly can be mounted in a variety of ways
- FIRE STROBE 2OOO is designed to accommodate AC or DC operation
- Units are provided with a 12 VAC plug in transformer

MANUFACTURED BY:
ACCESS PRODUCTS, INC.

DISTRIBUTED BY:

FIRE STROBE 2OOO Technical Specifications

BASIC CONCEPT

The FIRE STROBE 2OOO signal is received optically by line of sight. The range varies with the ambient light and intensity of the strobe emitter. A typical range varies from 150 feet to 500 feet. The detector will not allow false operation with unwanted signals from radio interference and/or flashing headlights or loud sounds.

The acquisition time from the emitter light source to the discriminate module is approximately .5 seconds.

The FIRE STROBE 2OOO is widely used for security /electric gate access. It can be used for firehouse garage doors and other related access needed by emergency vehicles. This emergency-vehicle strobe detector provides rapid access to any gated community that has been serviced by fire and emergency equipment from the OPTICOM* STROBE SYSTEM.

INSTALLATION & TESTING

Complete installation instructions are provided with the FIRE STROBE 2OOO for simple hook-up of the unit to interface with your gate or access control. Two dry contacts are also provided for bi-directional operation where needed

The photoeye assembly is typically mounted 8 feet to 10 feet above the street level and is aimed for optimal strobe signal. (A total of (2) photoeye assemblies may be used). A 12 VAC power supply is provided with the FIRE STROBE 2OOO system.

Testing can be accomplished with the optional fire strobe transmitter tester. This FIRE STROBE 2OOO transmitter will enable a throughput of signals from the photoeye assembly to the relay output. This is a hand-held transmitter which operates via 9-volt battery.

TECHNICAL SPECIFICATIONS

1. Frequency 14.035 Hz+/- .25 Hz for class II signals. For OPTICOM* emitters, double, quad flash strobes 140-170 fpm. 100 % digital.
2. The FIRE STROBE 2OOO is fully compatible with the OPTICOM* priority control emitter.
3. Now with Strobewatch™ programmable for double and quad flash, vehicle mounted strobes. These are usually found on police and other emergency vehicles.
4. The strobe acquisition time is .5 seconds.
5. The PC board construction is mounted in the enclosed 8" x 8" x 4" rain-tight NEMA J-Box.
6. The weight is approximately seven pounds.
7. The power requirements are 12/24 volts AC/DC non-polarity conscious, approximately 1 watt draw.

WARRANTY

The FIRE STROBE 2OOO has a one year warranty when used according to the manufacturer's specifications. This warranty does not apply when the FIRE STROBE 2OOO has been abused, over voltaged, or altered in any way, The warranty coverage is at the sole discretion of the manufacturer. This unit is to be used only for the operations described above.

COVER SHEET

EARTHWORK

1. Topsoil Excavation Includes:
   a. Excavation of topsoil and other structurally unsuitable materials within those areas that will require earth excavation or compacted earth fill material, in order to achieve the plan subgrade elevations. The amount of topsoil to be stripped shall be verified in the field by a soils engineer.
   b. Placement of the excavated material in OWNER designated areas for future use within areas to be landscaped, and those areas not requiring structural fill material.
   c. Compaction of the excavated material where placed in areas not requiring structural fill material, shall be moderate.
   d. Excess materials, if not utilized as fill or if not stockpiled for future landscaping, shall be completely removed from the construction site and disposed of by the CONTRACTOR.
2. Earth Excavation Includes:
   a. Excavation of earth and other materials which are suitable for use as structural fill. The excavation shall be to within a tolerance of 0.3 feet (+) of the plan subgrade elevations. The (+) tolerance within pavement areas shall be such that the earth material shall "balance" as part of the fine grading operation.
   b. Placement of the earth and other suitable materials shall be within those areas requiring structural fill in order to achieve the plan subgrade elevations to within a tolerance of 0.3 feet (+). The fill material shall be placed in loose lifts that shall not exceed eight (8) inches in thickness, and the water content shall be adjusted in order to achieve the required compaction. Earth material may be placed within those portions of the building site not requiring structural fill, to within four (4) inches of the plan finished grade elevation. In areas requiring structural fill, however, the earth material shall not be placed over topsoil or other unsuitable materials unless specifically directed by a Soils Engineer with the concurrence of the OWNER.
   c. Compaction of the earth and other suitable materials, shall be to at least 95% of the maximum dry density as determined by the Modified Proctor Test, ASTM D1557 laboratory procedure within proposed pavement areas and building areas, an rear yards abutting to the proposed lakes. Moderate compaction is required elsewhere. All fill shall be placed in 8" lifts, loose measure.
   d. Excess materials, if not utilized as fill, shall be completely removed from the construction site and disposed of by the CONTRACTOR.
3. Unsuitable Material
   a. Unsuitable material shall be considered as material which is not suitable for the support of pavement and building construction, and is encountered below normal topsoil depths and the proposed subgrade elevation. The decision to remove said material, and to what extent, shall be made by a Soils Engineer with the concurrence of the OWNER in writing.
4. General

   The Grading CONTRACTOR shall:
   a. Maintain proper site drainage at all times during the course of construction, and prevent storm water from running into or standing in excavated areas.
   b. Spread and compact uniformly to the degree specified all excess trench spoil after completion of the underground improvements.
   c. Scarify and compact to the degree specified the upper twelve (12) inches of the suitable subgrade material, in all areas that may be soft due to excess moisture content. This applies to cut areas as well as fill areas.
   d. Provide water to add to dry material in order to adjust the moisture content for the purpose of achieving the specified compaction.
5. Testing and Final Acceptance
   a. The CONTRACTOR shall provide as a minimum, a fully loaded tri-axle dumptruck or similar equipment for proof rolling the pavement subgrade prior to the placement of the curb and gutter and the base material. In addition, the pavement aggregate base course shall also be proof rolled. The Village Engineer shall be notified 48 hours in advance of any proof roll.
   b. Specific compaction testing may be required by the OWNER in selected fill areas. The CONTRACTOR shall bear the cost of any compaction testing which does not meet specification as well as the responsibility and cost for the necessary correction(s).
   c. Approval of the pavement subgrade by the OWNER shall be required prior to the placement of the pavement materials.
   d. The subgrade soil shall be tested by a professional geotechnical engineer at the developer's expense and shall have a minimum designated Illinois Bearing Ratio (IBR equal to three (3).
   e. A soil investigation report shall be provided to the Village to verify the in situ IBR value. Pavement structures with subgrade soil having an IBR value less than three (3) shall have an increased pavement structure as necessary to carry the design traffic loading.
6. Method of Measurement
   a. As-built measurements of earthwork for the purpose of payment shall not apply. the quantities shown in the engineer's "quantity estimate" shall be utilized unless said quantities are adjusted by mutual consent of the owner and contractor prior to the signing and acceptance of a contract.
   b. The quantities as shown in the engineer's "quantity estimate" are those estimated by the engineer and are provided solely for the convenience of the contractor. the contractor by choosing to utilize these quantities in the preparation of his "lump sum" bid, also accepts their accuracy. the contractor is therefore encouraged to make his own independent earthwork calculation, and to visit the site prior to the preparation of his bid.
   c. Prior to the removal of unsuitable material, the contractor shall notify the owner for authorization to remove said material, upon authorization and removal, the contractor shall request that the unsuitable material shall be field measured by the engineer in place.
7. Basis of payment
   a. Payment for all earthwork shall be "lump sum". the contractor shall provide unit prices for earthwork for the purpose of contract adjustment, if required.
   b. Payment for the removal of unsuitable material shall be based on the quantities as field measured by the engineer. the contractor shall provide as part of his bid a unit price per cubic yard for the removal of unsuitable material. said unit price shall include the complete removal of the material, replacement with a suitable material obtained by the contractor from a borrow source, and compaction to the required specification.

UNDERGROUND UTILITIES - GENERAL

1. The Underground CONTRACTOR Shall:
   a. Adhere to the criteria for the separation between water mains and sanitary sewers, storm sewers, combined sewers, sewer services and septic fields according to the requirements stated in the IEPA Rules for Public Water Supplies (the formal citation is Title 35, Subtitle F, Chapter II, Parts 651-654). All sewer water main separations shall be constructed per the "Standard Specifications for Water and Sewer Main Construction in Illinois".
   b. Be responsible to place on grade, and coordinate with other CONTRACTORS, all underground utility structure frames such as manholes, catch basins, and inlets.
   c. Be aware of potential conflicts with existing utilities. The CONTRACTOR shall excavate around the existing utilities to determine their exact location and elevation prior to the construction of the proposed utility improvements. Should unforeseen conflicts be found, the CONTRACTOR shall contact the ENGINEER prior to constructing the proposed improvements.
   d. Adjust or reconstruct any existing utility structure to the satisfaction of the utility owner. Adjustments and/or reconstructions not called for on the plans shall be considered incidental to the contract. No more than two adjusting rings within a min. of four inches (4") and a max. of twelve inches (12") of adjusting rings.
   e. Provide poured concrete fillets conforming to the shape of the pipe in all sanitary and storm manholes, and inlets.
   f. Be responsible for maintaining the top of any utility trench at least three (3) feet away from any existing or proposed curb or pavement, in those instances where the trench runs parallel to said curb or pavement.
   g. Be responsible for the dewatering of utility trenches during construction and providing the necessary trench bracing that may be required to assure safe working conditions.
   h. Remove soft material that may be encountered at the pipe invert elevation to a depth of at least one (1) ft. below the bottom of the pipe, and backfill with compacted bedding material.
   i. No damage to the road subgrade with excessive water saturation from hydrant flushing or from leaks in the water distribution system. The cost of repair for such damage shall be borne by the CONTRACTOR. Hoses should be used to direct the water from hydrant flushing into the storm sewer system (if available).
   j. Repair any existing field drainage tile damaged during construction, and properly reroute and/or connect said tile to the nearest storm sewer outlet. All locations of encountered field drainage tile shall be properly indicated on the CONTRACTOR'S record drawing.
   k. Furnish one (1) set of Record drawings to the ENGINEER upon completion of the sanitary sewers and water mains. Drawings (or table of locations) shall indicate the location of all sanitary sewer wyes (measured from the nearest downstream manhole), sewer stubs, water service along main and b-boxes. The CONTRACTOR shall also furnish linear distance along water main from appurtenances to appurtenance (valve vault to tee, tee to bend, etc.).
   l. Be responsible for implementation of the "Soil Erosion and Sedimentation Control Measures" as applicable.
   m. Maintain erosion control measures (straw bales and filter fabric) until grass is established.
2. Method of Measurement
   a. All sanitary sewer, storm sewer, and water main pipe shall be measured in the field after its installation. Payment shall be based on these field measurements.
   b. All appurtenances such as manholes, catchbasins, inlets, valves and valve vaults, valve boxes, and fire hydrants, shall be paid for on the basis of in-place quantities.
   c. Trench backfill material shall be measured by multiplying the as-constructed length of pipe (where applicable) by the average depth of the pipe by the "Payment Quantities per foot of Conduit" listed in Table 1, pg. 138 and "Typical Detail of Conduit Installation", pg. 137 of the Standard Specification for Sewer and Water in Illinois. If requested, the CONTRACTOR shall provide load tickets to the ENGINEER for verification of the trench backfill material delivered to the construction site. Load tickets for bedding material shall be submitted separately.
3. Basis of Payment
   a. All sanitary sewer, water main, and storm sewer pipe shall be paid for at the contract unit price per LINEAL FOOT. The price shall include the necessary labor and material for a complete in-place installation, as well as all incidental construction, testing, bedding material, and connections to existing utilities.
   b. All appurtenances for the underground improvements shall be paid for at the contract unit price EACH, said price to include the necessary labor and material for a complete in-place installation. The price for manholes, inlets, and catchbasins shall also include the frame and grate and all incidental construction. The price for fire hydrants shall also include a six (6) inch valve and box, and all incidental construction.
   c. Trench backfill material shall be paid for at the contract unit price per CUBIC YARD. Compaction must be made by mechanical methods.
4. As-Built Water & Sanitary Services
   a. As-built locations shall be provided for all water and sanitary sewer stubs. They shall also be stamped on the curb.
5. Structure Castings
   a. Frames and lids (or grates) for sanitary, watermain and storm sewer structures shall be as indicated on the plans, and the cost of same shall be integrated into the representative structure costs. Each structure lid shall be cast with text identifying the type of structure (storm, sanitary, water).
   b. Manhole castings shall be adjusted to finished grade using precast adjusting rings set on bitumastic material. All structures shall have no more than two adjusting rings w/ a min. of four inches (4") and a max. of twelve inches (12") of adjusting rings.
   c. All frames shall be set on a mastic bed with all gaps tuck pointed.
   d. All castings shall be made in the U.S.A. with U.S.A. materials.
6. Trench Backfill
   a. Bedding, haunching and the initial backfill shall consist of IDOT CA-7, CA-11 OR CA-19 aggregate. The initial backfill shall be placed to at least 12" above the pipe.
   b. Final backfill of the trench shall be accomplished by careful replacement of the excavated material. Any pipe installed under or within a 45 degree angle of repose (1:1) from the top of pipe to the edge of pavement, driveway (when driveway location is known) or curb and gutter shall be backfilled to the top of the trench with compacted IDOT CA-7, CA-11 or CA-19 material.
   c. Compaction shall be in achieved using 8" lifts (uncompacted) and mechanical compaction to 95% density. All costs for compaction and testing shall be paid for by the Developer or Contractor. Results shall be copied to the Village Engineer.

SANITARY SEWER

1. Material shall be:
   a. Green polyvinyl chloride pipe (PVC) SDR 26.
   b. PVC SDR 26 or D.I.P. CL 52.
   c. sewer pipe and fittings shall be in accordance with ASTM D-3034 for sizes 4"-15" (100-375 mm).
2. Joints shall be:
   a. for PVC; flexible elastomeric seal joints, ASTM D-3139, pressure joint.
   b. for DIP; rubber gasket joints, ANSI A21.11
3. Bedding shall be as detailed on the Engineering Plan.
4. Minimum size for mains shall be eight inches (8") and the minimum size for services shall be 6".
5. Wyes or Tees shall be provided on the new sanitary sewers for proposed building services.
6. "Band Seal" or similar couplings shall be used when joining pipes of dissimilar materials.
7. All sanitary structures shall have an external wrap, MAC or approved equal.
8. Polyethylene encasement shall be provided for all DIP sanitary sewer in accordance with AWWA latest standards.
9. Prior to pipe laying and jointing, the trench shall be sufficiently dewatered to maintain the water level in the trench at or below the base of the bedding. State / Federal permits, license agreements or other required approvals shall be obtained prior to dewatering.
10. Where separation from water main cannot be maintained as required per Illinois specifications, the sanitary sewer shall be mechanical joint PVC pressure pipe meeting C-900 or C-905.
11. Sewers shall be laid straight in both horizontal and vertical planes between manholes with a minimum cover of 4 feet.
12. Sanitary sewers shall be located a minimum of 10 feeet from any building and meet separation requirements of the Standard Specifications for Water and Sewer Main Construction in Illinois.
13. Services shall be a minimum 6 inches and extend to the property line or beyond any utility located in the front yard of a lot being served (single-family development), or to within five (5) feet from the face of a proposed building being served (multi-family and commercial development). The termination points shall be clearly located with a green-topped 4 inch x 4 inch stake extending a minimum 3 feet above final grade. The service lines shall be connected to the sewer using a wye at the 10:00 and 2:00 positions. Service lines not immediately connected to the building to be served shall be tightly plugged, using a plug provided by the pipe manufacturer for such use.
14. Testing and Final Acceptance
   a. Sanitary sewer mains and services shall be tested for exfiltration of air under pressure and deflection for flexible thermoplastic pipe in accordance with the Standard Specifications for Water and Sewer Construction in Illinois prior to their final acceptance. Allowable testing limits shall be as described in the "Standard Specifications" unless the local requirements are more restrictive. Service stubs must be properly plugged and sealed and clearly located at their termination points prior to testing. All sewer mains, service lines and manholes shall be clean and free of debris prior to their final acceptance. Sanitary Sewer shall be inspected and tested in accordance with the local jurisdictional requirements for television inspection and reviewed by the Village Engineer. Two copies of all test results shall be provided to the Municipality.
   b. Sanitary Manhole structures shall be tested, prior to acceptance, for watertightness by either of the following methods in conformance with the requirements specified: ASTM C 969: "Standard Practice for Infiltration and Exfiltration Acceptance Testing of Installed Precast Concrete Pipe Sewer Lines." OR ASTM C 1244: "Standard Test Method for Concrete Sewer Manholes by the Negative Pressure (Vacuum) Test."
   c. All public sanitary sewer extensions shall be internally video taped by remote camera. Tapes shall be in color using VHS or CD-ROM format and submitted with written reports to the Village Engineer for review and approval priot to acceptance of the sewer improvements by the Village.
   d. LaGrange Highlands will be the agency responsible for sewer main acceptance.

WATER MAIN

1. The Village of Western Springs is the agency responsible for the water main.
2. All installations shall conform to the requirements of the Standard Specifications for Water and Sewer Main Construction in Illinois.
3. Material for main pipe and fittings shall be class 52 ductile iron pipe with poly wrap for the public water main per AWWA C-151, with mechanical and push-on joints complying with AWWA C-111.
4. Material for the services shall be soft temper, Type K, copper water tubing, conforming to ASTM latest standard w/ compression fittings, unless otherwise noted on the plans.
5. Sizes for main & service lines shall be as indicated on the Engineering Plan.
6. Connections to Village water system shall be made under full water service pressure. Unless noted on plans and Village approval granted for shutdown. Shutdown requests need to be made to municipal services department 4 days prior to desired shutdown date. Contractor required to distribute shutdown notices to any impacted customers 2 business days prior. Village to provide notice text.
   a. Tapping sleeves shall include two piece bolted sleeve type with mechanical joints, Mueller-H615, or equal with joint accessories.
   b. Tapping valves shall include fully ported gate valves complying with AWWA C500 and mechanical joints type, Mueller-H667 or equal. Tapping valves shall be placed in precast concrete vaults.
7. The shut-off valve or curb stop for services shall be located as shown on the plans and shall be installed with a valve box of design approved by the Municipality. The termination point shall be clearly located with a blue-topped 4 inch x 4 inch stake extending a minimum of 3 feet above and below final grade.
8. Valves: Mueller, Clow or equal mechanical joint, resilient wedge seat, cast iron, bronze-mounted, O-ring seal, bronze non-rising stems, gate valves. Valvesshall open left and be tested to 500 psi with a 250 psi working pressure.
9. Water services, where indicated on the "Quantity Estimate" as "long" or "short", shall include the necessary length of Type "K": copper water tube of the size shown on the plans, corporation stop, curb stop, and service box, and all necessary labor, tools, equipment, excavation & backfill, for a complete installation as shown on the Engineering plans. Trench backfill will be paid for separately, when required.
10. Valve Boxes
    a. Valve boxes shall be adjustable, 3-piece cast iron, 5-1/4 inch shaft roadway-type and no-tilit drop cover with "WATER" cast into it.
    b. Valve box stabilizer of PVC manufactured by Valve Box Stabilizer, Inc. for six-inch (6") and eight-inch (8") valve boxes shall be provided.
    c. Valve box must have additional upward or downward travel when adjusted to finished grade.
11. Valve Vaults
    a. All valve vaults shall be precast reinforced concrete only.
    b. All valve vaults shall have no more than two adjusting rings with a minimum of four inches (4") and a maximum of twelve inches (12") of adjusting rings.
    c. All lifting holes, joints between precast reinforced concrete sections, rubber gaskets cast into concrete structures need to be water tight and shall be tuckpointed with hydraulic cement.
    d. All castings shall be set on bitumastic material.
    e. Bitumastic material shall be placed between precast reinforced concrete sections.
    f. All valve vaults shall have neoprene coated or fiberglass steps.
    g. Vaults and boxes shall not be allowed under streets, sidewalks or driveways.

WATER MAIN

11. Fire Hydrants
    a. Fire Hydrants shall be Mueller super centurian 250. Factory painted safety red with 5-1/4 inch valve opening and shall be painted red.
    b. The hydrant shall be for a five foot (5') bury with mechanical joint shoe and have two 2-1/2 inch hose connections and one four and one-half inch (4-1/2") male pumper connection. Thread shall be National Standard.
    c. The hydrant shall have a break-away traffic flange and connections.
    d. All fire hydrants not in service shall be bagged.
    e. Hydrants leads shall be six-inch (6") swivel anchoring coupling. Hydrant tees shall be used in lieu of swivel anchoring coupling pipe where required to meet plan locations.
    f. The maximum distance between fire hydrants shall be 350 feet.
    g. All fire hydrants shall be kept clear of obstructions within three (3) feet in all directions. This shall include posts, fences, vehicles, growth, trash, storage, and any other material or objects.
    h. All fire hydrants to have a 10 pound anode bag attached to the hydrant.
12. Pipe Cover and Separation
    a. Cover over water pipes shall be a minimum of 5.5 feet.
    b. Horizontal and vertical separation shall meet requirements of the "Standard Specifications for Water and Sewer Main Construction in Illinois." Locations requiring alternative materials are noted on the plans.
13. Pipe Laying
    a. The contractor shall keep the trench free from water while the water main is being placed and until the pipe joint has been sealed to the satisfaction of the Village Engineer.
    b. Adequate provisions shall be made for the safety, storage, and protection of all water pipe prior to installation in the trench. Care shall be taken to prevent damage to the pipe castings, both inside and out. Provisions shall be made to keep the inside of the pipe clean throughout its storage period and to keep mud and/or other debris from being deposited therein. All pipe shall be thoroughly cleaned on the inside before laying of the pipe. Proper equipment shall be used for the safe handling, conveying, and laying of the pipe so as to prevent damage to water main materials and protective coatings and linings. Under no circumstances shall water main materials be dropped or dumped into the trench.
    c. In making joints, all portions of the jointing materials and the socket and spigot ends of the joining pipe shall be wiped clean of all foreign materials. The actual assembly of the jointing shall be in accordance with the manufacturer's installation instructions. During construction, until jointing operations are complete, the open ends of all pipes shall at all times be protected and sealed with temporary watertight plugs.
    d. During water main installation, to make a closure between two pipe ends, or between pipe end fittings, or between pipe end and valve, short lengths shall be used with proper connections or couplings. Repair sleeves shall not be used to make closures during new construction.
    e. All pipe and trenching shall be viewed and approved by the Municipality prior to cover and backfill.
    f. All bends of 22-1/2 degrees or greater, and all tees and plugs shall be thrust protected to prevent movement of the line under pressure. Thrust protection may also be attained by the use of a combination or retaining glands and threaded rods. All locations of thrust blocking or retaining glands/rods need to be marked on the as built drawing.
14. Testing and Disinfection
    a. Water main shall be tested in accordance with AWWA C-600 & the local jurisdictional requirements prior to it final acceptance. A 24 hour system pressure test needs to be performed as per the Standard Specifications. The pressure and leakage tests and disinfection of the mains shall be as described in the "Standard Specifications" unless the local requirements are more restrictive. All valve vaults shall be clean and free of debris and water, and individual service boxes shall be visible and clearly located prior to their final acceptance.
    b. The preferred point of application of the chlorinating agent shall be at the beginning of the pipeline extension or any valved section of it and through a corporation stop in the top of the newly laid pipe. The injector for delivering the chlorine gas into the pipe should be supplied from a tap on the pressure side of the gate valve controlling the flow into the pipeline extension.
    c. Water from the existing distribution system or any other source of supply shall be controlled so as to flow slowly into the newly laid pipeline during the application of chlorine-gas. The rate of chlorine mixture flow shall be in such proportion to the rate of water entering the pipe that the chlorine dose applied to the water entering the newly laid pipe shall be at least fifty parts-per-million (50ppm), or enough to meet the requirements during the retention period.
    d. Valves shall be manipulated so that the strong chlorine solution in the line being treated shall not flow back into the line supplying the water. The pipe section being chlorinated shall be kept at a lower pressure than the water system pressure.
    e. Treated water shall be retained in the pipe long enough to destroy all spore-forming bacteria. This retention period shall be at least twenty-four (24) hours. After the chlorine-treated water has been retained for the required time, the chlorine residual at the pipe extremities and at other representative points shall be at least twenty five parts-per-million (25ppm).
    f. In the process of chlorinating newly laid pipe, all valves or other appurtenances shall be operated while the pipeline is filled with the chlorinating agent.
    g. After all mains have been pressure tested, they shall be disinfected and tested according to the requirements of the Standards for Disinfecting Water Mains, AWWA C-601 and C-651, and as required by this Section. All disinfection, as required by this Section, shall be performed by an independent firm exhibiting experience in the methods and techniques of this operation, and shall be approved by the Village Public Works Department. The contractor shall obtain two samples of water from the main for bacteriological testing. A second series of samples shall be collected no less than 24 hours after the first set of samples has been collected. The contractor and the Village will be furnished with copies of the bacteriological report for their records.

STORM SEWER

1. All storm sewer shall conform to the requirements of The Standard Specifications for Water and Sewer Main Construction in Illinois
2. Storm sewers shall be reinforced concrete pipe conforming to ASTM C76 minimum Class III with O-ring joints conforming to ASTM C443.
3. Bedding shall be minimum of 6" of CA-7.
4. Minimum size shall be twelve inches (12").
5. Storm Structures
   a. Rear yard catch basins are not allowed.
   b. All storm structures shall be precast reinforced concrete only.
   c. All storm structures shall be set on a six-inch (6") CA-7 cushion.
   d. All storm structures shall have no more than two adjusting rings within a minimum of four inches (4") and a maximum of twelve inches (12") of adjusting rings.
   e. All lifting holes, joints between precast reinforced concrete sections, gaps between pipes and structures shall be tuckpointed with hydraulic cement.
   f. Bitumastic material shall be placed between precast reinforced concrete sections.
   g. All steps shall be fiberglass or neoprene coated.
   h. All structure connections shall be concrete sewer pipe, ASTM C14 for extra strength pipe
6. Storm sewer and all storm structures shall be clean and free of debris prior to their final acceptance. Storm Sewer shall be inspected and tested in accordance with the local jurisdictional requirements including television inspection for review by the Village Engineer.
7. All flared end sections less than 48" (effective diameter) require grates in accordance with IDOT specifications.
8. All castings shall be made in the USA with USA materials. Closed covers shall be stamped per Exhibit 2B. Open covers shall have the grates as specified in the plans.

PAVING CURBS AND SIDEWALK

1. Fine Grading
   a. Prior to the construction of the curb and gutter and the placement of the base material, the streets shall be fine graded to within 0.1 feet + of final subgrade elevation, to a point two (2) feet beyond the back of the proposed curb.
2. Curb and Gutter
   a. The curb and gutter shall be the type as detailed on the Engineering Plans.
   b. The curbs shall be backfilled after their construction and prior to the placement of the base course.
3. Pavement
   a. The pavement materials shall be as detailed on the Engineering Plans. Thickness specified shall be considered to be the minimum compacted thickness.
4. General. The Paving Contractor shall:
   a. Repair any base course and binder course failures prior to the installation of the final bituminous concrete surface course.
   b. Sweep clean the binder course prior to the installation of the final bituminous concrete surface course. Excessive cleaning of the binder course that may be required, and is not the fault of the Paving CONTRACTOR, shall be paid for on a time and material basis by prior agreement with the OWNER.
   c. Permit the bituminous concrete binder course to weather one (1) winter season prior to the installation of the bituminous concrete surface course.
   d. Street signs & Traffic signs.
5. Testing and Final Acceptance
   a. Prior to the placement of the base course, the subgrade must pass a proof roll test to be approved by the local jurisdictional authority. The Village shall be contacted at least 2 business days in advance of the proof roll. (See "Testing and Final Acceptance for Earthwork")
   b. Prior to placement of the bituminous concrete surface course, the CONTRACTOR if requested by the OWNER, shall obtain specimens of the binder course with a core drill where directed by the ENGINEER, for the purpose of thickness verification. Coring shall be in accordance with the applicable provisions of ART.406.15 of the Standard Specification entitled "Standard Specifications for Road and Bridge Construction". The cost for obtaining cores, which meet or exceed the specification, shall be borne by the OWNER.
   c. Deficiencies in the bituminous concrete binder course shall be adjusted for by increasing the plan thickness of the surface course with no additional cost to the OWNER.
   d. A nuclear density test must be conducted on asphalt pavement in accordance with IDOT standards.
   e. Final acceptance of the total pavement installation shall be subject to the testing and checking requirements cited above.
6. Method of Measurement
   a. Curb and Gutter, and base course shall be measured in the field by the CONTRACTOR. The quantities shall be submitted to the OWNER for verification.
   b. When requested by the OWNER, documentation for the installed base course, bituminous concrete binder, and surface, shall be submitted to the ENGINEER for verification. Deficiencies in total bituminous concrete pavement thickness shall be adjusted for in accordance with the requirements of the jurisdictional authority.
7. Basis of Payment
   a. Curb and Gutter will be paid for at the contract unit price per LINEAL FOOT.
   b. Prime Coat material will be paid for at the contract unit price per GALLON.
   c. Base Course will be paid for at the contract unit price per SQUARE YARD.
   d. Bituminous Concrete will be paid for at the contract unit price per SQUARE YARD.

GENERAL NOTES

1. Definition of Terms
   a. The CONTRACTOR is the individual, firm, partnership or corporation contracting with the OWNER for performance of the prescribed work.
   b. The OWNER is the individual, firm, partnership or corporation having the authority to award the contract for the prescribed work.
   c. The ENGINEER where specifically referred to in the Specifications shall be the OWNER'S representative.
2. All CONTRACTORS shall be responsible for the following, which shall also be incidental to the cost of construction:
   a. Examination of the Engineering Plans and Specifications and the existing site conditions prior to submitting a bid, and notifying the ENGINEER at once of any discrepancies.
   b. The obtaining of any necessary permits not previously applied for by the OWNER, and posting of the necessary bonds.
   c. The notification of the start of construction to theVillage of WESTERN SPRINGS Public Services Dept. at (708) 246–8540, utility companies, and the ENGINEER at least two (2) working days prior to said start. All existing utilities must be staked prior to construction. All construction, including equipment startup, shall be between the hours of 7:00 a.m. to 8:00 p.m. weekdays, and 8:00 a.m. to 7:00 p.m. weekends and holidays.
   d. Calling attention to the OWNER of any errors or discrepancies, which may be suspected in lines and grades, which are established by the OWNER. The CONTRACTOR shall not proceed with the work until the lines and grades which are believed to be in error have been verified or corrected by the OWNER. Additional staking that may be required due to CONTRACTOR negligence shall be paid for by the CONTRACTOR.
   e. The providing of safe and healthful working conditions throughout the prosecution of the construction work. This shall include, but not be limited to: the removal of debris, the protecting of construction hazards with barricades and the keeping of public street pavements clean of construction dirt and debris.
   f. The restoration to the original condition or better of any areas that are damaged by the CONTRACTOR during construction.
   g. The testing of materials, if required by the OWNER and/or the jurisdictional agencies.
   h. The guarantee of all materials and workmanship for a period of one (1) year upon final acceptance by the OWNER and other jurisdictional agencies.
   i. Trees shall be installed a minimum of five (5) feet horizontally from sanitary sewers, sanitary services, watermains, and water services. Trees and light poles shall be installed a minimum of ten (10) feet horizontally from utility structures and appurtenances, including but not limited to manholes, valve vaults, valve boxes and fire hydrants.
   j. The contractor shall be responsible for implementation & maintenance of all soil erosion & sedimentation control measures throughout the entire project.
   k. Contractors are required to obtain applicable permits from the Municipality.
3. The OWNER shall be responsible for the following:
   a. Scheduling the necessary preconstruction meeting(s) with the jurisdictional agencies at least two (2) working days prior to the commencement of work.
   b. Insurance certificates from all contractors, naming the Village of WESTERN SPRINGS as additional insured, prior to preconstruction meeting being set.
   c. Providing the CONTRACTOR with one (1) set of control line and grade stakes (at offsets mutually agreed upon) for the proper prosecution and control of the work.
   d. Applying for IEPA, IDOT, and all applicable County, Municipal and Sanitary District Permits. Other necessary permits shall be the responsibility of the CONTRACTOR.
4. The ENGINEER shall be responsible for the following:
   a. To periodically visit the construction site in order to better carry out the duties and responsibilities assigned by the OWNER and undertaken by the ENGINEER.
   b. The ENGINEER shall not, during such visits or as a result of such observations of the CONTRACTOR(S)' work in progress, supervise, direct or have control over the CONTRACTOR(S)' work nor shall the ENGINEER have authority over or responsibility for the means, methods, techniques, sequences or procedures of construction selected by the CONTRACTOR(S)', for safety precautions and programs incident to the work of the CONTRACTOR(S) or for any failure of the CONTRACTOR(S) to comply with laws, rules, regulations, ordinances, codes or orders applicable to the CONTRACTOR(S) furnishing and performing their work. Accordingly, the ENGINEER can neither guarantee the performance of the construction contracts by the CONTRACTOR(S) nor assume responsibility for the CONTRACTOR(S)' failure to furnish and perform their work in accordance with the Contract Documents.
5. Except where modified by the contract documents, all work proposed herein shall be in accordance with the following specifications, which are hereby made a part hereof:
   a. "Standard Specifications for Road and Bridge Construction", and "Supplemental Specifications and Recurring Special Provisions", latest edition, prepared by the Illinois Department of Transportation (IDOT Standard Specifications).
   b. Standard Specifications for Water and Sewer Main Construction in Illinois, latest edition, as adopted by the Illinois Society of Professional Engineers, etal.
   c. Illinois Urban Manual, latest edition.
   d. Village of WESTERN SPRINGS Codes and Ordinances, current edition when these plans were approved.
   e. American With Disabilities Act, Standards for Accessible Design, latest ed.
6. In the event of a conflict between statements, which apply to the construction work, the OWNER should contact the Public Works Director for direction.

MWRD SPECIFICATIONS

A. Referenced Specifications

1. All construction shall be in accordance with the applicable sections of the following, except as modified herein or on the plans;
   a. Sstandard Sspecifications for Road and Bridge Construction (latest edition), by the Illinois Department of Transportation (IDOTt SS) for all improvements except sanitary sewer and water main construction;
   b. Standard Specifications for Water and Sewer Main Construction in Illinois, latest edition (SSWS) for sanitary sewer and water main construction;
   c. Village of WESTERN SPRINGS municipal code (latest edition);
   d. The Metropolitan Water Reclamation District of Greater Chicago (NWRD) Watershed Management Ordinance and Technical Guidance Manual (latest edition);
   e. In case of conflict between the applicable ordinances noted, the more stringent shall take precedence and shall control all construction.

B. Notifications

1. The MWRD local sewer systems section field office must be notified at least two (2) working days prior to the commencement of any work (call 708–588–4055).
2. The Village of WESTERN SPRINGS Engineering Department and Public Works must be notified at least 24 hours prior to the start of construction and prior to each phase of work. Contractor shall determine items requiring inspection prior to start of construction or each work phase.
3. The Contractor shall notify all utility companies prior to beginning construction for the exact locations of utilities and for their protection during construction. If existing utilities are encountered that conflict in location with new construction, immediately notify the engineer so that the conflict can be resolved. call J.U.L.I.E. at 1–800–892–0123.

C. General Notes

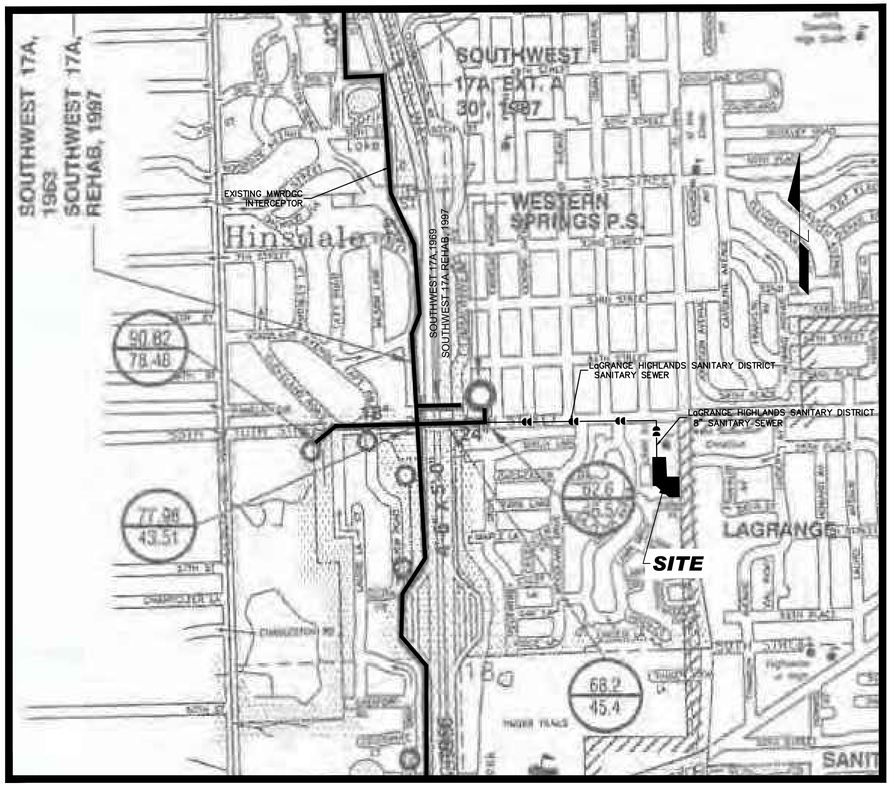
1. All elevations shown on plans reference the north american vertical datum of 1988 (NAVD88). Conversion factor is XXXX ft.
2. MWRD, the Municipality and the Owner or Owner's Representative shall have the authority to inspect, approve, and reject the construction improvements.
3. The Contractor(s) shall indemnify the Owner, Engineer, Municipality, MWRD, and their Agents,from all liability involved with the construction, installation, or testing of this work on the project.
4. The proposed improvements must be constructed in accordance with the engineering plans as approved by mwrd and the municipality unless changes are approved by MWRD, the Municipality, or authorized agent. The construction details, as presented on the plans, must be followed. Proper construction techniques must be followed on the improvements indicated on the plans.
5. The location of various underground utilities which are shown on the plans are for information only and represent the best knowledge of the Engineer. Verify locations and elevations prior to beginning the construction operations.
6. Any existing pavement, sidewalk, driveway, etc., damaged during construction operations and not called for to be removed shall be replaced at the expense of the Contractor.
7. Material and compaction testing shall be performed in accordance with the requirements of the Municipality, MWRD, and Owner.
8. The Underground Contractor shall make all necessary arrangements to notify all inspection agencies.
9. All new and existing utility structures on site and in areas disturbed during construction shall be adjusted to finish grade prior to final inspection.
10. Record drawings shall be kept by the Contractor and submitted to the Engineer as soon as underground improvements are completed. Final payments to the Contractor shall be held until they are received. Any changes in length, location or alignment shall be shown in red. All wyes or bends shall be located from the downstream manhole. All valves, B–Boxes, tees or bends shall be tied to a fire hydrant.

D. Sanitary Sewer

1. The Contractor shall take measures to prevent any polluted water, such as ground and surface water, from entering the existing sanitary sewers.
2. A water–tight plug shall be installed in the downstream sewer pipe at the point of sewer connection prior to commencing any sewer construction. the plug shall remain in place until removal is authorized by the Municipality and/or MWRD after the sewers have been tested and accepted.
3. Discharging any unpolluted water into the sanitary sewer system for the purpose of sewer flushing of lines for the deflection test shall be prohibited without prior approval from the Municipality or MWRD.
4. All sanitary sewer construction shall be in accordance with the Standard Specifications for Water and Sewer Main Construction in Illinois (latest edition).
5. All floor drains shall discharge to the sanitary sewer system.
6. All downspouts and footing drains shall discharge to the storm sewer system.
7. All sanitary sewer pipe materials and joints (and storm sewer pipe materials and joints in a combined sewer area) shall conform to the following:

Pipe Material	Pipe Specifications	Joint Specifications
Vitrified Clay Pipe	ASTM C–700	ASTM C–425
Reinforced Concrete Sewer Pipe	ASTM C–76	ASTM C–443
Cast Iron Soil Pipe	ASTM A–74	ASTM C–564
Ductile Iron Pipe	ANSI A21.51	ANSI A21.11
Polyvinyl Chloride (PVC) Pipe 6–inch to 15–inch Diameter SDR 26 18–inch to 27–inch Diameter F/DY=46	ASTM D–3034 ASTM F–679	ASTM D–3212 ASTM D–3212
High Density Polyethylene (HDPE)	ASTM D–3350 ASTM D–3035	ASTM D–3261, F–2620 (heat fusion) ASTM D–3212, F–477 (gasketed)
Water Main Quality PVC 4–inch to 36–inch 4–inch to 12–inch 14–inch to 48–inch	ASTM D–2241 AWWA C900 AWWA C905	ASTM D–3139 ASTM D–3139 ASTM D–3139

The following materials are allowed on a qualified basis subject to District review and approval prior to permit issuance. A special condition will be added to the permit when the pipe material below is used for sewer construction or a connection is made.



Pipe Material	Pipe Specification	Joint Specification
Polypropylene (PP) Pipe		
12–inch to 24–inch Double Wall	ASTM F–2736	ASTM D–3212,F–477
30–inch to 60–inch Triple Wall	ASTEM F–2764	ASTM D–3212, F–477

8. All sanitary sewer construction (and storm sewer construction in combined sewer areas), requires stone bedding with stone ¼" to 1" in size, with minimum bedding thickness equal to ¼ the outside diameter of the sewer pipe, but not less than four (4) inches or more than eight (8) inches. Material shall be CA–7, CA–11 or CA–13 and shall be extended at least 12" above the top of the pipe when using PVC.
9. Non–shear flexible–type couplings shall be used in the connection of sewer pipes of dissimilar pipe materials.
10. All manholes shall be provided with bolted, watertight covers. Sanitary lids shall be constructed with a concealed pickhole and watertight gasket with the word "sanitary" cast into the lid.
11. When connecting to an existing sewer main by means other than an existing wye, tee, or an existing manhole, one of the following methods shall be used:
    a. A circular saw–cut of sewer main by proper tools ("shewer–Tap" machine or similar) and proper installation of hubwye saddle or hub–tee saddle.
    b. Remove an entire section of pipe (breaking only the top of one bell) and replace with a wye or tee branch section.
    c. With pipe cutter, neatly and accurately cut out desired length of pipe for insertion of proper fitting, using "band seal" or similar couplings to hold it firmly in place.
12. Whenever a sanitary/combined sewer crosses under a watermain, the minimum vertical distance from the top of the sewer to the bottom of the watermain shall be 18 inches. Furthermore, a minimum horizontal distance of 10 feet between sanitary/combined sewers and watermains shall be maintained unless: the sewer is laid in a separate trench, keeping a minimum 18" vertical separation; or the sewer is laid in the same trench with the watermain located at the opposite side on a bench of undisturbed earth, keeping a minimum 18" vertical separation. If either the vertical or horizontal distances described above cannot be maintained, or the sewer crosses above the watermain, the sewer shall be constructed to water main standards or it shall be encased with a water main quality carrier pipe with ends sealed.
13. All existing septic systems shall be abandoned. Abandoned tanks shall be filled with a granular material or removed.
14. All sanitary manholes, (and storm manholes in combined sewer areas), shall have a minimum inside diameter of 48 inches, and shall be cast in place or pre–cast reinforced concrete.
15. All sanitary manholes, (and storm manholes in combined sewer areas), shall have precast "rubber boots" that conform to ASTM C–923 for all pipe connections. Precast sections shall consist of modified groove tongue and rubber gasket type joints.
16. All abandoned sanitary sewers shall be plugged at both ends with at least 2 feet long non–shrink concrete or mortar plug.
17. Except for foundation/footing drains provided to protect buildings, or perforated pipes associated with volume control facilities, drain tiles/field tiles/underdrains/perforated pipes are not allowed to be connected to or tributary to combined sewers, sanitary sewers, or storm sewers tributary to combined sewers in combined sewer areas. Construction of new facilities of this type is prohibited, and all existing drain tiles and perforated pipes encountered within the project area shall be plugged or removed, and shall not be connected to combined sewers, sanitary sewers, or storm sewers tributary to combined sewers.
18. A backflow preventer is required for all detention basins tributary to combined sewers. Required backflow preventers shall be inspected and exercised annually by the property owner to ensure proper operation, and any necessary maintenances shall be performed to ensure functionality. In the event of a sewer surcharge into an open detention basin tributary to combined sewers, the permittee shall ensure that clean up and wash out of sewage takes place within 48 hours of the storm event.

MWRD SPECIFICATIONS CONT'D

E. Erosion and Sediment Control

1. The contractor shall install the erosion and sediment control devices as shown on the approved erosion and sediment control plan.
2. Erosion and sediment control practices shall be functional prior to hydrologic disturbance of the site.
3. All design criteria, specifications, and installation of erosion and sediment control practices shall be in accordance with the Illinois urban manual.
4. A copy of the approved erosion and sediment control plan shall be maintained on the site at all times.
5. Inspections and documentation shall be performed, at a minimum:
   a. Upon completion of initial erosion and sediment control measures, prior to any soil disturbance.
   b. Once every seven (7) calendar days and within 24 hours of the end of a storm event with greater than 0.5 inch of rainfall or liquid equivalent precipitation.
6. Soil disturbance shall be conducted in such a manner as to minimize erosion. If stripping, clearing, grading, or landscaping are to be done in phases, the co–permittee shall plan for appropriate soil erosion and sediment control measures.
7. A stabilized mat of crushed stone meeting the standards of the illinois urban manual shall be installed at any point where traffic will be entering or leaving a construction site. Sediment or soil reaching an improved public right–of–way, street, alley or parking area shall be removed by scraping or street cleaning as accumulations warrant and transported to a controlled sediment disposal area.
8. Concrete washout facilities shall be constructed in accordance with the Illinois Urban Manual and shall be installed prior to any on site construction activities involving concrete.
9. Mortar washout facilities shall be constructed in addition to concrete washout facilities for any brick and mortar building envelope construction activities.
10. Temporary diversions shall be constructed as necessary to direct all runoff from hydrologically disturbed areas to an appropriate sediment trap or basin. Volume control facilities shall not be used as temporary sediment basins.
11. Disturbed areas of the site where construction activities have temporarily or permanently ceased shall be stabilized with temporary or permanent measures within seven (7) days.
12. All flood protection areas and volume control facilities shall, at a minimum, be protected with a double–row of silt fence (or equivalent).
13. Volume control facilities shall not be constructed until all of the contributing drainage area has been stabilized.
14. Soil stockpiles shall, at a minimum, be protected with perimeter sediment controls. Soil stockpiles shall not be placed in flood protection areas or their buffers.
15. Earthen embankment side slopes shall be stabilized with appropriate erosion control blanket.
16. Storm sewers that are or will be functioning during construction shall be protected by appropriate sediment control measures.
17. The contractor shall either remove or replace any existing drain tiles and incorporate them into the drainage plan for the development. Drain tiles cannot be tributary to a sanitary or combined sewer. Drain tiles allowed in combined sewer area for green infrastructure practices.
18. If dewatering services are used, adjoining properties and discharge locations shall be protected from erosion and sedimentation. Dewatering systems should be inspected daily during operational periods. the site inspector must be present at the commencement of dewatering activities.
19. The contrctor shall be responsible for trench dewatering and excavation for the installation of sanitary sewers, storm sewers, watermains as well as their services and other appurtenances. Any trench dewatering, which contains sediment shall pass through a sediment settling pond or equally effective sediment control device. Alternatives may include dewatering into a sump pit, filter bag or existing vegetated upslope area. sediment laden waters shall not be discharge to waterways, flood protection areas or the combined sewer system.
20. All permanent erosion control practices shall be initiated within seven (7) days following the completion of soil disturbing activities.
21. All erosion and sediment control measures shall be maintained and repaired as needed on a year–round basis during construction and any periods of construction shutdown until permanent stabilization is achieved.
22. All temporary erosion and sediment control measures shall be removed within thirty (30) days after permanent site stabilization.
23. The erosion and sediment control measures shown on the plans are the minimum requirements. additional measures may be required, as directed by the Engineer, Site Inspector, or MWRD.

EXISTING CONDITIONS & REMOVAL PLAN

REMOVE EXISTING CONCRETE & ASPHALT PAVEMENT TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).
OBTAIN APPROVAL FROM ADJACENT H.O.A. PRIOR TO CONSTRUCTION TWO DAYS ADVANCED NOTICE IS REQUIRED FOR ALL WORK ON PRIVATE PROPERTY.

REMOVE EXISTING PAVEMENT & CURB AS NECESSARY TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).

EXISTING RETAINING WALL TO BE REMOVED TO LIMITS SHOWN.

CONTRACTOR SHALL COORDINATE WITH COMED TO BRACE POWER POLES ADJACENT TO RETAINING WALL DURING REMOVAL AND CONSTRUCTION OF NEW WALL.

REMOVE EXISTING TREE (TYPICAL).

REMOVE EXISTING LOW FLOW STORM SEWER & STRUCTURES TO CONSTRUCT PROPOSED IMPROVEMENTS (TYPICAL).

EXISTING BUILDING & ADJACENT WALKS, WALLS, ENTRY'S & UTILITIES TO BE REMOVED AS REQUIRED TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).

EXISTING STONE RIP-RAP SWALE TO BE REMOVED AS REQUIRED TO CONSTRUCT PROPOSED IMPROVEMENTS (TYPICAL).

PROVIDE 6' HIGH POST-DRIVEN CHAIN LINK CONSTRUCTION FENCE WITH METAL POSTS SPACED NO FURTHER THAN 10' APART AROUND SITE PERIMETER WITH LOCKABLE GATES AT CONSTRUCTION ENTRANCE (TYPICAL)

EXISTING BUILDING & ADJACENT WALKS, STAIRS, ENTRY'S & UTILITIES TO BE REMOVED AS REQUIRED TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).

REMOVE EXISTING WATER SERVICE ON-SITE ONLY

REMOVE EXISTING WATER SERVICE & B-BOX (TYP.) IN RIGHT-OF-WAY. DISCONNECTION SHALL BE MADE AT THE MAIN IN ACCORDANCE WITH VILLAGE SPECIFICATIONS.

REMOVE EXISTING PAVEMENT & CURB AND GUTTER AS NECESSARY AT LOCATION OF EXISTING DRIVEWAY TO BE CLOSED/REMOVED IN ACCORDANCE WITH VILLAGE SPECIFICATIONS.

REMOVE EXISTING WATER SERVICE & B-BOX (TYP.) IN RIGHT-OF-WAY. DISCONNECTION SHALL BE MADE AT THE MAIN IN ACCORDANCE WITH VILLAGE SPECIFICATIONS.

EXISTING BUILDING & ADJACENT WALKS, ENTRY'S & UTILITIES TO BE REMOVED AS REQUIRED TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).

REMOVE EXISTING TREE (TYPICAL).

S. Line, Lot 4
N. Line, Lot 5

E. Line, W. 1/2, Lot 5

REMOVE EXISTING PAVEMENT & CURB TO CONSTRUCT PROPOSED IMPROVEMENTS IN ACCORDANCE WITH VILLAGE SPECIFICATIONS (TYPICAL).

S. Line, Lot 5
N. Line, Lot 6

EXISTING STONE RIP-RAP SWALE TO BE REMOVED AS REQUIRED TO CONSTRUCT PROPOSED IMPROVEMENTS (TYPICAL).

REMOVE EXISTING STORM SEWER & STRUCTURES & BACKFILL TO CONSTRUCT PROPOSED IMPROVEMENTS (TYPICAL).

EXISTING GRATE, CONCRETE END SECTION ON, RETAINING WALL AND CHAIN LINK FENCE TO BE REMOVED TO LIMITS INDICATED. REMOVAL WILL ALLOW FOR EXTENSION OF 6'X4' CONCRETE BOX CULVERT.

EXISTING DRIVEWAY APRON AND SIDEWALK SHALL REMAIN IN PLACE DURING SITE CONSTRUCTION.

REMOVE 2' HMA FULL DEPTH PAVEMENT ADJACENT TO CURB & GUTTER REMOVAL. REMOVAL AND REPLACEMENT SHALL EXTEND 2 FEET BEYOND EXISTING TRANSITION ON BOTH ENDS OF DRIVEWAY. REMOVAL SHALL BE IN ACCORDANCE WITH CCDOTH PERMIT REQUIREMENTS.

EXISTING FENCE TO BE REMOVED AS NECESSARY TO MAKE PROPOSED IMPROVEMENTS (TYP.).

EROSION CONTROL & SEDIMENTATION NOTES

1. UNLESS OTHERWISE INDICATED, ALL VEGETATIVE AND STRUCTURAL EROSION AND SEDIMENT CONTROL PRACTICES WILL BE CONSTRUCTED ACCORDING TO MINIMUM STANDARDS AND SPECIFICATIONS IN THE ILLINOIS URBAN MANUAL, LATEST EDITION, AND ALL OTHER AUTHORITIES HAVING JURISDICTION.
2. THE APPLICANT AND/OR CONTRACTOR IS RESPONSIBLE FOR INSURING THE OBTAINED PERMIT WITH THE COMPLETED SWPPP IS POSTED ON SITE IN A PROMINENT LOCATION BEFORE COMMENCEMENT OF ANY WORK ON SITE AND SHALL CONTACT THE VILLAGE AT LEAST 2 WORKING DAYS BEFORE THE START OF CONSTRUCTION, INSTALLATION OF SEDIMENT AND EROSION MEASURES AND COMPLETION OF FINAL LANDSCAPING.
3. THE VILLAGE SHALL BE PROVIDED WITH A COPY OF THE IEPA LETTER OF NOTIFICATION OF COVERAGE PRIOR TO COMMENCEMENT OF CONSTRUCTION.
4. THE DEVELOPER IS RESPONSIBLE FOR HAVING THE SWPPP AND A STAMPED AND SIGNED COPY OF THE APPROVED SOIL EROSION AND SEDIMENT CONTROL PLAN ON SITE AT ALL TIMES AND BE PRESENTED WHEN REQUESTED BY ANY AUTHORIZED AGENCY.
5. THE DEVELOPER SHALL INSPECT THE SOIL EROSION AND SEDIMENT CONTROL PRACTICES EVERY SEVEN (7) DAYS AND AFTER 0.5" OR MORE RAINFALL. IMMEDIATE REPAIR SHALL BE MADE OF ANY DAMAGED EROSION CONTROL ELEMENTS THROUGHOUT THE CONSTRUCTION OF THE PROJECT.
6. ALL CONSTRUCTION TRAFFIC SHALL ENTER SITE ONLY AT PROPOSED STABILIZED CONSTRUCTION ENTRANCE AS SHOWN ON PLANS.
7. ALL DIRT, MUD, OR DEBRIS THAT REACHES THE PUBLIC ROADS SHALL BE CLEANED IMMEDIATELY BY THE CONTRACTOR.
8. TECHNIQUES SHALL BE EMPLOYED TO PREVENT THE BLOWING OF DUST OR SEDIMENT FROM THE SITE.
9. SILT FENCE, SILT BASINS, AND STABILIZED CONSTRUCTION ENTRANCE(S) SHALL BE CONSTRUCTED AS DETAILED ON THE FINAL ENGINEERING PLANS PRIOR TO THE START OF CONSTRUCTION AND SHALL REMAIN IN PLAN UNTIL THE DISTURBED AREA IS STABILIZED. IN ADDITION, SILT FENCE SHALL BE PROVIDED FOR AREAS DRAINING 200' AND GREATER IN ACCORDANCE WITH NRCS CODE 920.
10. SCHEDULE OF CONTROL MEASURE IMPLEMENTATION:
    A. CONSTRUCT THE APPLICABLE PORTIONS OF THE EROSION AND SEDIMENTATION CONTROLS PRIOR TO SITE CLEARING.
    B. CONTROL SITE DEVELOPMENT IN ACCORDANCE WITH THE SPECIFICATIONS.
    C. MAINTAIN INLET PROTECTION, CONSTRUCTION TRAFFIC SURFACES, CLEANING OF STORM STRUCTURES AND THE LIKE ON A REGULAR BASIS AFTER EACH HEAVY RAIN OR AS OTHERWISE REQUIRED.
11. THE ESTIMATED CONSTRUCTION SCHEDULE IS AS FOLLOWS:

DEMOLITION	WINTER	2025
MASS EARTHWORK	SPRING	2025
TEMPORARY BASIN STABILIZATION	SPRING	2025
UNDERGROUND IMPROVEMENTS	SPRING/SUMMER	2025
ROADWAY (CURB & PAVEMENT)	SUMMER	2025
BUILDING CONSTRUCTION	SUMMER	2025
FINAL GRADING	SUMMER	2025
BASIN STABILIZATION	SUMMER	2025
FINAL LANDSCAPING	SUMMER	2026

    THE ENTIRE SITE MUST BE STABILIZED, USING A HEAVY MULCH LAYER OR ANOTHER METHOD AT THE CLOSE OF THE CONSTRUCTION SEASON.
12. DISTURBED AREAS WITHIN ALL PUBLIC R.O.W.'S SHALL BE RESTORED W/ 6" MIN. TOPSOIL & SOD. RESTORATION SHALL OCCUR IMMEDIATELY AFTER COMPLETION OF CONSTRUCTION, WEATHER PERMITTING. ALL OTHER DISTURBED AREAS SHALL BE RESTORED WITH 4" TOPSOIL & SEED.
13. STRAW BALES ARE NOT PERMITTED IN AREAS OF CONCENTRATED FLOW. ROCK CHECK DAMS SHALL BE USED IN THESE AREAS. TECHNIQUES THAT DIVERT UPLAND RUNOFF PAST DISTURBED SLOPES SHALL BE EMPLOYED.
14. THE PROTECTION OF THE OPEN LID DRAINAGE STRUCTURES SHALL BE CONSTRUCTED AS SPECIFIED IN DETAILS. ALL OPEN LID DRAINAGE STRUCTURES LOCATED IN YARD AREAS AND THE SEDIMENTATION BASIN MUST BE PROTECTED PER INLET PROTECTION DETAILS UNTIL SUCH A TIME THAT THE LANDSCAPING IS IN PLACE AND EFFECTIVELY PREVENTING POTENTIAL SILTATION OF THESE STRUCTURES. ALL OPEN LID DRAINAGE STRUCTURES IN PAVED AREAS SHALL HAVE FILTER BASKETS INSTALLED UNDER THE LIDS. IN THE EVENT THE GRAVEL BASE IS NOT IN PLACE UPON INSTALLATION, INLET PROTECTION SHALL BE PROVIDED AS INDICATED PER INLET PROTECTION DETAIL.
15. EROSION CONTROL BLANKET (ECB) SHALL BE INSTALLED TO ALL DISTURBED AREAS WITH SLOPES EQUAL TO OR STEEPER THAN 5H:1V AND IN CRITICAL AREAS (EX: DETENTION BASIN PERIMETERS, STREAMBANKS, BERMS, ETC.) IMMEDIATELY UPON FINAL GRADING. S175 NORTH AMERICAN GREEN (OR SIMILAR) ECB SHALL BE USED. ECB WITH GREEN DYE IS NOT ACCEPTABLE.
16. SOIL STOCKPILES SHALL BE STABILIZED OR COVERED AT THE END OF EACH WORKDAY. STOCKPILES TO REMAIN IN PLACE FOR 14 DAYS OR MORE SHALL RECEIVE TEMPORARY SEEDING.
17. DURING DEWATER OPERATIONS, WATER WILL BE PUMPED INTO SEDIMENT BASINS OR SILT TRAPS. DEWATERING DIRECTLY INTO FIELD TILES OR STORMWATER STRUCTURES IS PROHIBITED.
18. AN INCIDENT OF NON-COMPLIANCE (ION) MUST BE COMPLETED AND SUBMITTED BY THE OWNER TO THE IEPA AND COPIED TO THE VILLAGE IF, AT ANY TIME, AN EROSION OR SEDIMENT CONTROL DEVICE FAILS.
19. A NOTICE OF TERMINATION (NOT) SHALL BE COMPLETED BY THE OWNER IN COMPLIANCE WITH THE NPDES PHASE II REQUIREMENTS WHEN ALL PERMANENT EROSION CONTROL MEASURES ARE IN PLACE WITH A 70% ESTABLISHED RATE OF VEGETATION. THE NOTICE OF TERMINATION SHALL BE SENT TO THE IEPA AND THE VILLAGE.
20. THE CONTRACTOR SHALL TAKE THE NECESSARY STEPS TO CONTROL WASTE SUCH AS DISCARDED BUILDING MATERIALS, CONCRETE TRUCK WASHOUT, CHEMICALS, LITTER AND SANITARY WASTE AT THE CONSTRUCTION SITE THAT MAY CAUSE ADVERSE IMPACTS TO WATER QUALITY.

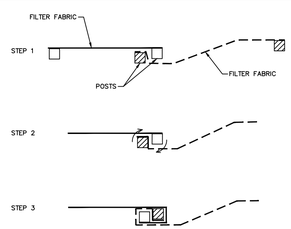
SILT FENCE PLAN

ELEVATION

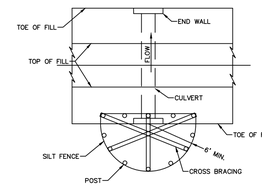


FABRIC ANCHOR DETAIL

NOTES:
1. TEMPORARY SEDIMENT FENCE SHALL BE INSTALLED PRIOR TO ANY GRADING WORK IN THE AREA TO BE PROTECTED. THEY SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD AND REMOVED IN CONJUNCTION WITH THE FINAL GRADING AND SITE STABILIZATION.
2. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 509 GEOTEXTILE TABLE 1 OR 2, CLASS I WITH EQUIVALENT OPENING SIZE OF AT LEAST 30 FOR NONWOVEN AND 50 FOR WOVEN.
3. FENCE POSTS SHALL BE WITHER STANDARD STEEL POST OR WOOD POST WITH A MINIMUM CROSS–SECTIONAL AREA OF 3.0 SQ. IN.

REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-620
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 2
Checked Date		DATE 11-20-01
Approved Date		

SILT FENCE

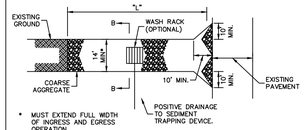


ATTACHING TWO SILT FENCES

NOTES:
1. PLACE THE END POST OF THE SECOND FENCE INSIDE THE END POST OF THE FIRST FENCE.
2. ROTATE BOTH POSTS AT LEAST 180 DEGREES IN A CLOCKWISE DIRECTION TO CREATE A TIGHT SEAL WITH THE FABRIC MATERIAL.
3. DRIVE BOTH POSTS A MINIMUM OF 18 INCHES INTO THE GROUND AND BURY THE FLAP.

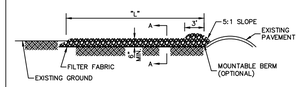
REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-620(W)
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 2
Checked Date		DATE 1-29-99
Approved Date		

CULVERT INLET PROTECTION - SILT FENCE



PLAN VIEW

NOTES:
1. THE SILT FENCE SHALL MEET THE REQUIREMENTS AS SHOWN ON STANDARD DRAWING IL-620 SILT FENCE EXCEPT THE MINIMUM POST SPACING SHALL BE 3 FEET AND THE TOPS OF POSTS SHALL BE CROSS BRACED.
2. SEDIMENT SHALL BE REMOVED WHEN THE SEDIMENT HAS ACCUMULATED TO ONE–HALF THE HEIGHT OF THE SLT FENCE.
3. THE MAXIMUM DRAINAGE AREA TO THE CULVERT BEING PROTECTED IS 1 ACRE.

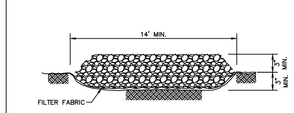


REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-508SF
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 1
Checked Date		DATE 1-29-99
Approved Date		

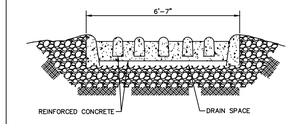
STABILIZED CONSTRUCTION ENTRANCE PLAN

* MUST EXTEND FULL WIDTH OF INGRESS AND EGRESS OPERATION.

PLAN VIEW



SIDE ELEVATION



NOTES:
1. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 592 GEOTEXTILE, TABLE 1 OR 2, CLASS I,II OR IV AND SHALL BE PLACED OVER CLEARED AREA PRIOR TO THE PLACING OF ROCK.
2. ROCK OR RECLAIMED CONCRETE SHALL MEET ONE OF THE FOLLOWING IDOT COARSE AGGREGATE GRADATION, CA–1, CA–2, CA–3, OR CA–4 AND BE PLACED ACCORDING TO CONSTRUCTION SPECIFICATION 25 ROCKFILL USING PLACEMENT METHOD 1 AND CLASS III COMPACTION.
3. ANY DRAINAGE FACILITIES REQUIRED BECAUSE OF WASHING SHALL BE CONSTRUCTED ACCORDING TO MANUFACTURERS SPECIFICATIONS.
4. IF WASH RACKS ARE USED THEY SHALL BE INSTALLED ACCORDING TO THE MANUFACTURER'S SPECIFICATIONS.

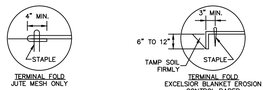
PIPE OUTLET SEDIMENT TRAP - ST I



NOT TO SCALE

6. CONSTRUCTION OPERATIONS SHALL BE CARRIED OUT IN SUCH A MANNER THAT EROSION AND WATER POLLUTION ARE ABATED. ONCE CONSTRUCTED, THE TOP AND OUTSIDE FACE OF THE EMBANKMENT SHALL BE STABILIZED WITH SEED AND MULCH. POINTS OF CONCENTRATED INFLOW SHALL BE PROTECTED IN ACCORDANCE WITH GRADE STABILIZATION STRUCTURE CRITERIA. THE REMAINDER OF THE INTERIOR SLOPES SHOULD BE STABILIZED (ONE TIME) WITH SEED AND MULCH UPON TRAP COMPLETION AND MONITORED AND MAINTAINED EROSION FREE DURING THE LIFE OF THE TRAP.
7. THE STRUCTURE SHALL BE REMOVED AND AREA STABILIZED WHEN THE DRAINAGE AREA HAS BEEN PROPERLY STABILIZED.
8. ALL CUT AND FILL SLOPES SHALL BE 2:1 OR FLATTER.
9. ALL PIPE CONNECTIONS SHALL BE WATERTIGHT.
10. ABOVE THE WET STORAGE ELEVATION, THE RISER SHALL BE PERFORATED WITH 1/2" WIDE BY 6" LONG SLITS OR 1" DIAMETER HOLES SPACED 6" VERTICALLY AND HORIZONTALLY. NO PERFORATIONS WILL BE ALLOWED WITHIN 6" OF THE HORIZONTAL BARREL.
11. THE RISER SHALL BE WRAPPED WITH 1/2" HARDWARE CLOTH (WIRE) THEN WRAPPED WITH GEOTEXTILE CLASS E. THE FILTER CLOTH SHALL EXTEND 6" ABOVE THE HIGHEST SLIT AND 6" BELOW THE LOWEST SLIT. WHERE ENDS OF FILTER CLOTH COME TOGETHER, THEY SHALL BE OVERLAPPED, FOLDED AND FASTENED TO PREVENT BYPASS. FILTER CLOTH SHALL BE REPLACED AS NECESSARY TO PREVENT CLOGGING.
12. STRAPS OR CONNECTING BANDS SHALL BE USED TO HOLD THE FILTER CLOTH AND WIRE FABRIC IN PLACE. THEY SHALL BE PLACED AT THE TOP AND BOTTOM OF THE CLOTH.
13. FILL MATERIAL AROUND THE PIPE SPILLWAY SHALL BE HAND COMPACTED IN 4" LAYERS. A MINIMUM OF 2' OF HAND–COMPACTED BACKFILL SHALL BE PLACED OVER THE PIPE SPILLWAY BEFORE CROSSING IT WITH CONSTRUCTION EQUIPMENT.
14. THE RISER SHALL BE ANCHORED WITH EITHER A CONCRETE BASE OR STEEL PLATE BASE TO PREVENT FLOTATION. CONCRETE BASES SHALL BE AT LEAST TWICE THE RISER DIAMETER AND 12" DEEP WITH THE RISER EMBEDDED 9". STEEL PLATE BASES SHALL BE AT LEAST TWICE THE RISER DIAMETER, 1/4" MINIMUM THICKNESS AND ATTACHED TO THE BOTTOM OF THE RISER BY A CONTINUOUS WELD TO FORM A WATERTIGHT CONNECTION. THEN PLACE 2' OF STONE, GRAVEL OR TAMPED EARTH ON THE PLATE.
15. ANTI SEEP COLLARS SHALL BE CONSTRUCTED IN ACCORDANCE WITH PLANS (REF. TABLE 16 AND DETAILS 13 AND 14).
16. CONCENTRIC TRASH RACK AND ANTI–VORTEX DEVICE DESIGN DETAILS ARE ON DETAIL 16.
17. REFER TO SECTION D FOR DEWATERING REQUIREMENTS OF SEDIMENT TRAPS.
18. OUTLET – AN OUTLET SHALL BE PROVIDED, WHICH INCLUDES A MEANS OF CONVEYING THE DISCHARGE IN AN EROSION FREE MANNER TO AN EXISTING STABLE CHANNEL.
19. WHERE DISCHARGE OCCURS AT THE PROPERTY LINE, LOCAL ORDINANCES AND DRAINAGE EASEMENT REQUIREMENTS SHALL BE MET.

EROSION BLANKET PLAN

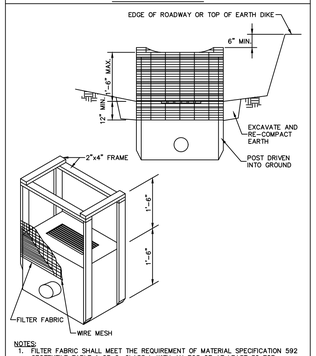
DETAIL 3 DETAIL 4



DETAIL 5

NOTES:
1. ON EROSION CONTROL PAPER, CHECK SLOTS, IN DITCH CHANNEL SHALL BE SPACED SO THAT ONE OCCURS WITHIN EACH 50' ON SLOPES OF MORE THAN 4% AND LESS THAN 6% ON SLOPES OF 6% OR MORE, THEY SHALL BE SPACED SO THAT ONE OCCURS WITHIN EACH 25'.
2. STAPLES ARE TO BE PLACED ALTERNATELY, IN COLUMNS APPROXIMATELY 2' APART AND IN ROWS APPROXIMATELY 3' APART. APPROXIMATELY 175 STAPLES ARE REQUIRED PER 4'x 225' ROLL OF MATERIAL AND 125 STAPLES ARE REQUIRED PER 4'x 150 ROLL OF MATERIAL.
3. EROSION CONTROL MATERIAL SHALL BE PLACED LOOSELY OVER GROUND SURFACE. DO NOT STRETCH.
4. ALL TERMINAL ENDS AND TRANSVERSE LAPS SHALL BE STAPLED AT APPROXIMATELY 12" INTERVALS.

PLAN VIEW

TYPICAL SECTION A–A

NOTES:
1. SEDIMENT SHALL BE REMOVED AND THE TRAP RESTORED TO ITS ORIGINAL DIMENSIONS WHEN THE SEDIMENT HAS ACCUMULATED TO 1 THE DESIGN DEPTH OF THE TRAP. REMOVED SEDIMENT SHALL BE DEPOSITED ON A SUITABLE AREA AND IN SUCH A MANNER THAT IT WILL NOT ERODE.
2. THE SEDIMENT TRAP SHALL BE REMOVED AND THE AREA STABILIZED WHEN THE CONSTRUCTION DRAINAGE AREA HAS BEEN PROPERLY STABILIZED.
3. ALL CUT SLOPES SHALL BE 2:1 OR FLATTER.

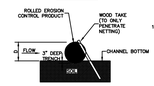
ROLLED EROSION CONTROL PRODUCTS



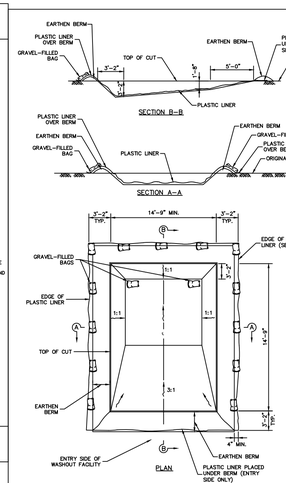
NOT TO SCALE

STAKING PATTERN GUIDE

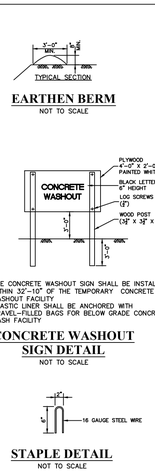
NOTES:
1. OVERLAP MINIMUM IS THE DIAMETER OF THE ROLL.
2. 4' SPACING FOR MATTLES.
3. 2' SPACING FOR ROLLED EXCELSIOR.
4. OR SPACE ACCORDING TO MANUFACTURER'S SPECIFICATIONS.

STAKE DETAIL

COMPOST FILTER SOCK DETAIL



WHEN COMPOST FILTER SOCK DITCH CHECK IS USED, PLACE A COMPOST BERM UPSTREAM OF THE FILTER SOCK (SEE ILM 805). A TRENCH IS NOT REQUIRED.



NOTES:
1. DRAWINGS ARE NOT TO SCALE
2. ENDS OF MATTLES OR ROLLED EXCELSIOR SHALL BE TURNED AT LEAST 6" UPSLOPE.
3. STAKES SHALL BE DRIVEN FLUSH WITH THE GROUND, BUT TOP NOT BURIED.
4. STAKES SHALL NOT EXTEND ABOVE THE STRAW MATTLE MORE THAN 2".
5. SPACING THE TOE OF THE UPSTREAM DITCH CHECK SHALL CREATE A HORIZONTAL LINE WITH THE TOP OF THE DOWNSTREAM DITCH CHECK.
6. WHEN COMPOST FILTER SOCK DITCH CHECK IS USED, PLACE A COMPOST BERM UPSTREAM OF THE FILTER SOCK (SEE ILM 805). A TRENCH IS NOT REQUIRED.

STORM SEWER GRATES

ROADWAY: EJIW 7525Z & EJIW 7525M
GRASS: EJIW 6527
(UNLESS OTHERWISE NOTED ON PLANS)

UTILITY CROSSING INFORMATION (XX)

1. MAINTAIN 18" MINIMUM VERTICAL SEPARATION BETWEEN WATERMAIN AND STORM/SANITARY SEWERS.
2. DEPTHS OF EXISTING WM ARE ASSUMED AND MUST BE FIELD VERIFIED PRIOR TO START OF CONSTRUCTION.
3. WHEN THE WM CROSSES BELOW A SEWER, THE SEWER MUST BE CONSTRUCTED WITH WM QUALITY PIPE & JOINTS THAT COMPLY WITH 35 IAC 653.119 OR ELSE EITHER PIPE MUST BE INSTALLED IN A CASING. THE PROTECTION MUST EXTEND ON EACH SIDE OF THE CROSSING UNTIL THE NORMAL DISTANCE FROM THE WM TO THE SEWER IS AT LEAST 10 FEET. IN ADDITION, THE WM MUST BE LOCATED AT LEAST 18 INCHES BELOW THE SEWER. THIS 18 INCHES IS A STRUCTURAL PROTECTION TO PREVENT THE SEWER FROM SETTLING AND BREAKING THE WM.
4. WHEN THE WM CROSSES ABOVE A SEWER AND IT IS NOT 18 INCHES ABOVE THE CROWN OF THE SEWER WHERE THE PIPE CROSSES, THE SEWER MUST BE CONSTRUCTED WITH WM QUALITY PIPE & JOINTS (COMPLIANCE SAME AS ABOVE) OR A CASING PIPE CAN BE INSTALLED AROUND THE WM OR THE SEWER. THE CASING PIPE MUST BE A MATERIAL THAT IS APPROVED FOR USE AS WM. CONCRETE IS NOT AN ACCEPTABLE ENCASEMENT.
5. WHEN THE ENCASEMENT OPTION IS USED, IT SHALL BE ONE CONTINUAL SECTION (NO JOINTS).

(XX)

ID	BOTTOM OF PIPE	TOP OF PIPE	VERTICAL SEPARATION	CROSSING INFO.
1	650.83	648.47	2.36'	STORM OVER SANITARY

UTILITY PLAN

TYPICAL UTILITY SERVICE DETAIL

NOTES:

1. ALL WATER SERVICES SHALL BE 1-1/2" TYPE "K" COPPER WATER TUBE FROM WATERMAIN TO B-BOX
2. ALL SANITARY SERVICES SHALL BE 6" PVC (SDR 26) AT 1.0% SLOPE MINIMUM FROM SANITARY MAIN TO B-BOX.
3. WATER SERVICES SHALL BE SLEEVED WITH WATER QUALITY PIPE 10' EITHER SIDE OF STORM SEWER CROSSINGS. CASING PIPE VOIDS SHALL BE FILLED AND ENDS SEALED.
4. UNDERGROUND UTILITIES SHALL RECEIVE FULL DEPTH TRENCH BACKFILL WHERE INDICATED PER UNDERGROUND UTILITIES SPECIFICATIONS ON SHEET 2.
   = TRENCH BACKFILL
5. ALL DOWNSPOUTS MUST DISCHARGE AT GRADE AND THE DISCHARGE MUST BE WITHIN 5 FEET OF THE BUILDING WALL PER VILLAGE CODE.

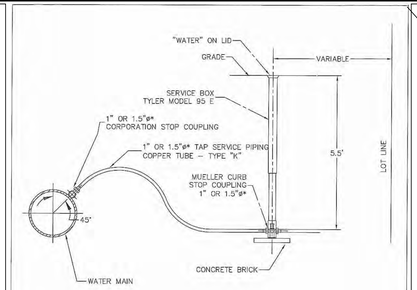
L:\Projects\2024\24-0001\Engineering\DWG\Final\24-0001 FE.dwg Plot Date: 1/27/2025 2:45:33 PM By dseth

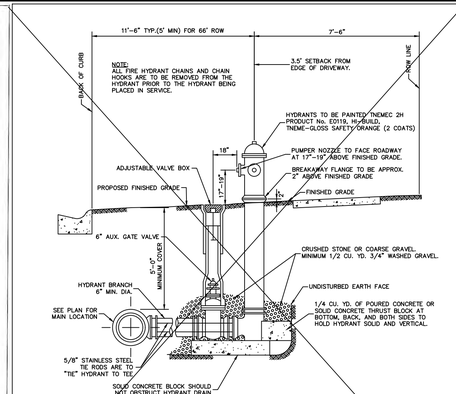


NOTES:

1. PROVIDE SELECT GRANULAR BACKFILL, CA- 11 AROUND CATCH BASIN TO SUBGRADE IN PAVED AREAS
2. ALTERNATE INLET BOTTOM – PRECAST REINFORCED CONCRETE BASE.
3. CONCRETE FILLETS SHALL BE MADE WITH NON-SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
4. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON-HARDENING MASTIC (RUB-R-NEK OR APPROVED EQUAL) TO A MAX. HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
5. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
6. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE MANHOLE WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL INLETS IN PAVED AREAS.

CATCH BASIN TYPE C

NOT TO SCALE



NOTES:

1. ALL FITTINGS SHALL BE COMPRESSION TYPE.
2. TRENCH BACKFILL (CA–7 CRUSHED LIMESTONE) SHALL BE USED UNDER AND WITHIN 2 FEET OF ALL PAVED AREAS (SIDEWALK, DRIVEWAY AND ROADWAY).
3. NO OPEN CUTTING OF PAVEMENT WILL BE PERMITTED. AUGER AND PUSH OR DIRECTIONAL BORE TO RECEIVING PIT IF MAIN IS UNDER PAVEMENT. SEE VILLAGE STANDARD DETAILS FOR PAVEMENT, SIDEWALK OR DRIVEWAY REPLACEMENT. ALL PAVEMENT, SIDEWALK, CURB AND DRIVEWAYS MUST BE SAW CUT FULL DEPTH PRIOR TO REMOVAL.
4. ON 4" WATER MAINS, AN ALL STAINLESS STEEL TAPPING CLAMP SHALL BE USED. IN ADDITION, THE HOLE DRILLED IN THE MAIN SHALL NOT EXCEED 1". EXCEPT FOR THE HOLE DRILLED IN THE MAIN, ALL HARDWARE FOR A 1.5" SERVICE SHALL BE SIZED FOR 1.5"ø.
5. Abandonment of existing water service requires removal of the corporation stop and placement of a stainless solid sleeve repair clamp.
6. NEW SERVICES SHALL BE TAPPED MIN. OF 2 FT. FROM EXISTING TAP.
7. RESTORATION OF PARKWAY SHALL BE MINIMUM 4" OF TOPSOIL AND SOD.
8. ANY DEVIATION FROM THIS PLAN SHALL BE APPROVED IN WRITING BY THE DEPARTMENT OF PUBLIC WORKS (708)246–1800 EXT. 200

**SIZE DETERMINED BY FIXTURE LOAD PER ILLINOIS PLUMBING CODE*

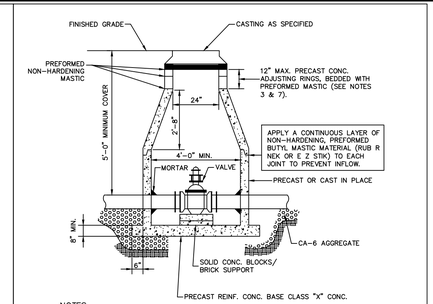
FIRE HYDRANT

NOT TO SCALE

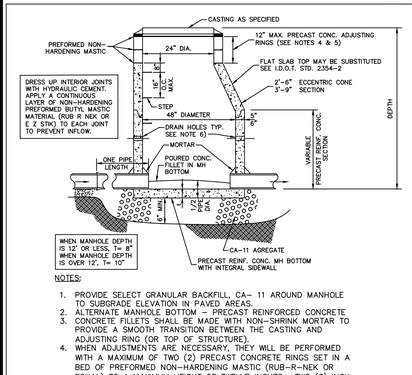


NOTES:

1. 60" DIA FOR ALL PRESSURE CONNECTIONS.
2. PIPE OPENINGS TO BE CAST INTO WALL.
3. PROVIDE CA–6 AGGREGATE BACKFILL AROUND WAULT TO SUBGRADE ELEVATION, IN PAVED AREAS.
4. NO MORE THAN 12 INCHES OF ADJUSTING RINGS MAY BE USED;HOWEVER NO MORE THAT ONE TWO INCH ADJUSTING RING OR NO MORE THAN TWO RINGS IN TOTAL MAY BE USED.
5. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PERFORMED NON–HARDENING MASTIC (RUB R NEK OR APPROVED EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES (12").

VALVE VAULT FOR PRESSURE CONNECTION

NOT TO SCALE



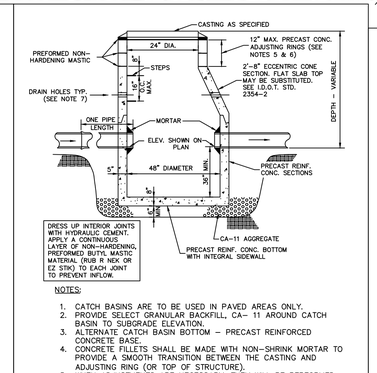
NOTES:

1. VAULT DIAMETER TO BE ONE FOOT LARGER, WHERE VALVE IS LOCATED AT TEE CONNECTION OF MAIN.
2. PROVIDE CA–6 AGGREGATE BACKFILL AROUND VAULT TO SUBGRADE ELEVATION, IN PAVED AREAS.
3. NO MORE THAN 12 INCHES OF ADJUSTING RINGS MAY BE USED. HOWEVER NO MORE THAN ONE, TWO INCH ADJUSTING RING OR NO MORE TAN TWO RINGS IN TOTAL MAY BE USED.
4. VALVE MUST BE ALIGNED WITH CENTER OF VAULT OPENING.
5. CONES MUST BE CONCENTRIC WITH VALVES 12" AND SMALLER.
6. BUTTERFLY VALES REQUIRE ECCENTRIC CONES.
7. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB R NEK OR APPROVED EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES (12").

VALVE VAULT TYPE A

(WATER TIGHT)

NOT TO SCALE

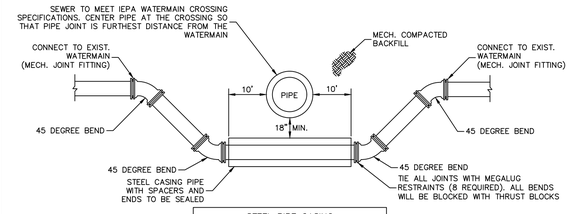


NOTES:

1. PROVIDE SELECT GRANULAR BACKFILL, CA– 11 AROUND MANHOLE TO SUBGRADE ELEVATION IN PAVED AREAS.
2. ALTERNATE MANHOLE BOTTOM – PRECAST REINFORCED CONCRETE
3. CONCRETE FILLETS SHALL BE MADE WITH NON–SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
4. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB–R–NEK OR EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
5. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
6. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE MANHOLE WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL MANHOLES IN PAVED AREAS.

STORM MANHOLE TYPE A

NOT TO SCALE



NOTES:

1. CATCH BASINS ARE TO BE USED IN PAVED AREAS ONLY.
2. PROVIDE SELECT GRANULAR BACKFILL, CA– 11 AROUND CATCH BASIN TO SUBGRADE ELEVATION.
3. ALTERNATE CATCH BASIN BOTTOM – PRECAST REINFORCED CONCRETE BASE.
4. CONCRETE FILLETS SHALL BE MADE WITH NON–SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
5. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB–R–NEK OR APPROVED EQUAL) TO A MAX. HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
6. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
7. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE CATCH BASIN WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL CATCH BASINS.

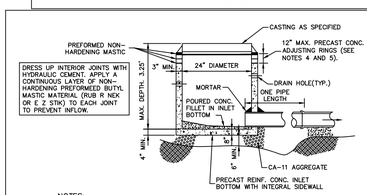
* RADIUS AS FURNISHED BY MANUFACTURER ALL SLOPE RATIOS ARE EXPRESSED AS UNITS OF VERTICLE DISPLACEMENT TO UNITS OF HORIZONTAL DISPLACEMENT (V:H)

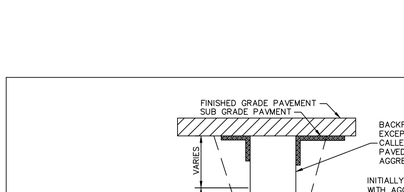


NOTES:

1. PRECAST CONCRETE FLARED END SECTIONS SHALL CONFORM TO THE APPLICABLE REQUIREMENTS OF AASHTO M–170 CLASS III, WALL "B" REINFORCED CONCRETE PIPE.
2. PRECAST CONCRETE FLARED END SECTION FOR PIPE DIAMETER REQUIRED SHALL BE AS INDICATED ON DETAIL PLAN FOR EACH INDIVIDUAL INSTALLATION.
3. THE END BLOCK SHALL BE PLACED PRIOR TO THE INSTALLATION OF THE FLARED END SECTION. THE END BLOCK SHALL BE BACKFILLED IN ACCORDANCE WITH ART. 502.10 OF THE STANDARD SPECIFICATIONS ADOPTED 7–1–94. COST INCIDENTAL TO END SECTION.
4. ALL REINFORCEMENT SHALL BE IN ACCORDANCE WITH I.D.O.T. STANDARD 2449–1.
5. ALL FLARED END SECTIONS FOR PIPE GREATER THAN 12" IN DIAMETER SHALL BE PROVIDED WITH A GRATE.

PRECAST REINFORCED CONCRETE FLARED END SECTION

NOT TO SCALE

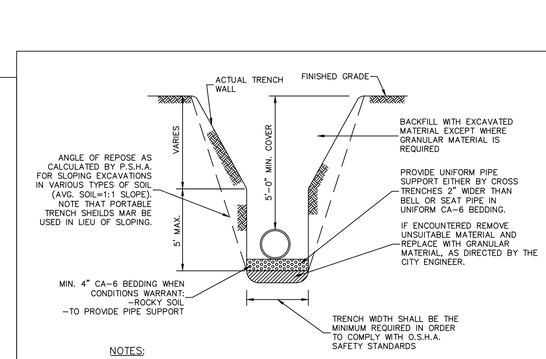


NOTES:

1. PROVIDE SELECT GRANULAR BACKFILL, CA–11 AROUND INLET TO SUBGRADE ELEVATION IN PAVED AREAS.
2. ALTERNATE INLET BOTTOM: PRECAST REINFORCED CONCRETE BASE.
3. CONCRETE FILLETS SHALL BE MADE WITH NON–SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE)
4. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB–R–NEK OR EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE INCHES.
5. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
6. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE MANHOLE WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL INLETS IN PAVED AREAS.

INLET TYPE A

NOT TO SCALE

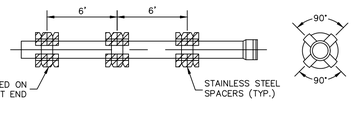


NOTE:
ALL TRENCHES UTILIZING TRENCH BACJFILL SHALL BE COMPACTED USING METHOD 1 IN CONFORMANCE WITH SEC. 550.07(a)–(METHOD 1) OF THE STANDARD SPECIFICATIONS FOR ROAD & BRIDGE CONSTRUCTION, AS ADOPTED 1–1–12 BY THE ILLINOIS DEPARTMENT OF TRANSPORTATION.

TRENCH SECTION FOR BACKFILL DETERMINATION

FOR STORM SEWER

NOT TO SCALE



NOTES:

1. IN PAVED AREAS ALL TRENCHES SHALL BE JETTED IN CONFORMANCE WITH SEC. 550.07 (METHOD 3) OF THE STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION, ADOPTED 1–1–97 BY THE ILLINOIS DEPARTMENT OF TRANSPORTATION.

TRENCH SECTION FOR WATER MAIN

NOT TO SCALE

NOTES:

1. SPACERS TO BE SIZED TO ALLOW CARRIER PIPE TO BE CENTERED IN CASING LOCATE SPACERS 2' FROM END OF CASING AND EVERY 6' EACH PIPE LENGTH
2. CASING TO BE SEALED AT BOTH ENDS WITH WATERTIGHT BITUMINOUS PLUG.
3. CASING PIPE SHALL CONFORM TO ASTM A 139, GRADE B, WITH 60,000 P.S.I. MINIMUM TENSILE STRENGTH. CASING PIPE SHALL BE BITUMINOUS COATED.

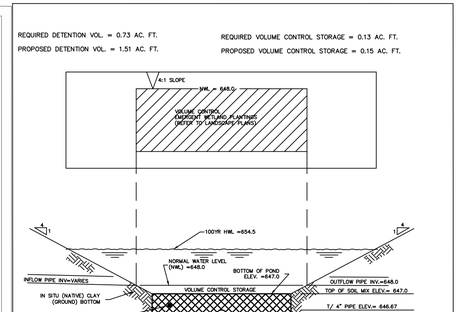
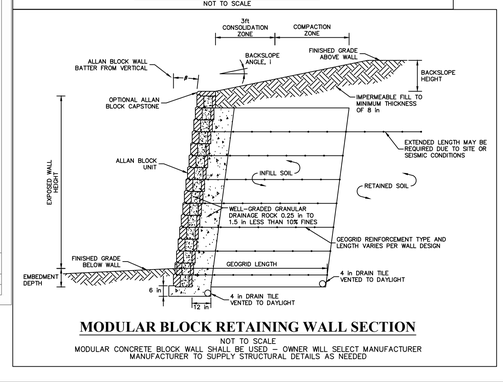
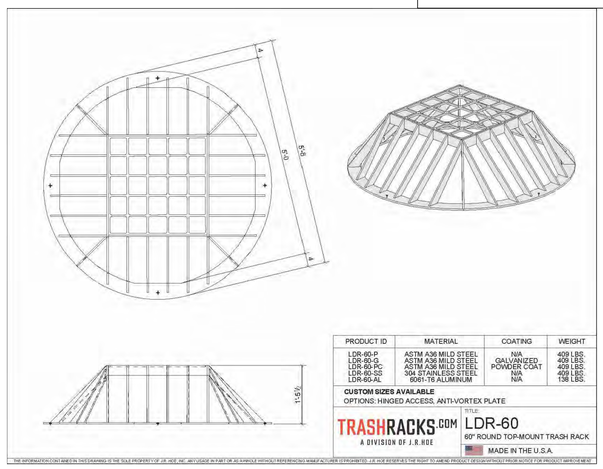
M3.12 CURB AND GUTTER
NOT TO SCALE





BOTTOM OF THE FACILITY:	ELEV. 647.0
SEASONALLY HIGH GROUNDWATER SEPARATION:	ELEV. 644.0 FEET 3.0



VOLUME TYPE	SURFACE AREA	DEPTH	POROSITY	STORAGE VOLUME	VOLUME PROVIDED
V_A : SURFACE STORAGE	7,261	1.0'	1.00	1.00 X V_A	7,261 ft³
V_B : SOIL MEDIA MIX	N/A	N/A	0.25	0.50 X 0.25 X V_B	0
V_C : COARSE AGGREGATE (ABOVE INVERT)	N/A	N/A	0.36	0.50 X 0.36 X V_C	0
V_D : COARSE AGGREGATE (BELOW INVERT)	N/A	N/A	0.36	0.36 X V_D	0
				TOTAL	7,261 ft³

NOTES:
1. THE PERIMETER OF THE VOLUME CONTROL FACILITY SHALL MAINTAIN THE MINIMUM HORIZONTAL SEPARATION DISTANCE OF: 10-FEET FROM FOUNDATIONS, UNLESS WATERPROOFED; 20-FEET FROM ROADWAY GRAVEL SHOULDER; AND 100-FEET FROM POTABLE WATER WELLS, SEPTIC TANKS/FIELDS, OR OTHER UNDERGROUND TANKS.
2. SANITARY OR COMBINED SEWERS SHALL NOT BE LOCATED WITHIN THE VOLUME CONTROL FACILITY. SANITARY OR COMBINED SEWERS SHALL NOT BE LOCATED BELOW THE FOOTPRINT OF THE VOLUME CONTROL FACILITY. WHEN LOCAL CONDITIONS PREVENT THE SEWER FROM BEING LOCATED OUTSIDE THE FOOTPRINT OF THE FACILITY THE SEWER SHALL BE CONSTRUCTED TO WATER MAIN QUALITY STANDARDS, OR IT SHALL BE ENCASED WITH A WATER MAIN QUALITY CARRIER PIPE WITH THE ENDS SEALED.
3. AVOID INSTALLATION ON SLOPES GREATER THAN 3.00%. AVOID COMPACTING NATIVE SOILS. SCARIFY ANY COMPACTED SOIL.
4. GEOTEXTILE FABRIC SHALL MEET REQUIREMENTS OF IUM MATERIAL SPECIFICATION 592, FOR WOVEN: APPARENT OPENING SIZE OF 0.50 MM (TABLE 1, CLASS 1). FOR NON WOVEN: APPARENT OPENING SIZE OF 0.30 MM (TABLE 2, CLASS II).
5. STONE STORAGE OPTIONS ARE IDOT CA-1, CA-3, CA-7, DISTRICT VULCAN MIX, OR APPROVED ALTERNATE. NO RECYCLED MATERIALS.
6. MINIMUM DISTANCE OF 2 FEET (3.5 FEET IN COMBINED SEWER AREAS) BETWEEN BOTTOM OF BMP AND SEASONALLY HIGH GROUNDWATER LEVEL.
7. UNDERDRAINS ARE REQUIRED IN TYPICAL CLAYEY SOILS WHERE INFILTRATION RATES ARE LESS THAN 0.5 INCH/HOUR. NO MORE THAN 1 UNDERDRAIN EVERY 30 FEET ON CENTER. PROVIDE A SOIL REPORT DOCUMENTING NATIVE INFILTRATION RATE TO FOREGO UNDERDRAINS. NO FILTER FABRIC COVER/SOCK.
8. MINIMUM UNDERDRAIN BEDDING OF 2 INCHES, MAXIMUM OF 12 INCHES.
9. MULCH LAYER SHALL BE HARDWOOD MULCH OR OTHER NON-FLOATING GROUND COVER.
10. FOLLOW THE REQUIRED PRETREATMENT MEASURES LISTED ON THE VOLUME CONTROL PRETREATMENT MEASURES DETAIL.

Specifications

HOUSING:
16GA HH high-strength, low-copper, proprietary cast aluminum alloy. 6005-T5 extruded aluminum. Anchor rods are hot dipped galvanized steel. Tenon is 356 HM sand cast aluminum.

FINISH:
A durable polyurethane enamel finish is applied after assembled are shot blasted to create a surface profile which allows for the highest level of paint adhesion. Laboratory tested for superior weatherability and fade resistance in accordance with ASTM B-117-64 and ANSI/ASTM G53-77 specifications. For larger projects where a custom color is required, contact the factory for more information.

WARRANTY:
Please visit **www.signify.com/warranties** for more details on structural and finish warranty.

OUTLET:
Standard DuplexOutlet has universal metal weatherproof cover. Weatherproof while in use. Heavy-duty all-metal construction. Lockable security cover. Meets NEC 406.9 (B). Weather resistant. GFI Duplex OutLet has dual-function indicator light, universal metal weatherproof cover. Weatherproof while in use. Heavy-duty all-metal construction. Lockable security cover. Meets NEC 406.9 (B). Weather resistant.

HADCO by @ignify | Urban | Hagerstown | TX03 Post top

Hadco's Hagerstown LED post top gives you the ability to create a unique style through our modular post top concepts to blend into any residential and historic urban settings. With the latest LED technology you can seamlessly replace traditional HID technology to maximize energy savings and significantly reduce total cost of ownership. The Hagerstown luminaire provides excellent uniformity, traditional cosmopolitan look, with the benefits of modern technology.

Specifications

Roof
Roof (0.090" thick spun aluminum (12"x1/4"x 16"x1/4"). Easy fuse replacement of either roof or bottom globe section if required.

Globe
Narrow body globe is constructed of clear injection-molded vertically ribbed UV stabilized acrylic globe. Globe is secured to the cast aluminum wheels gasking of .1"x.1" and an ourabberstrick diameter of 9". Globe (wasroof) has a 13"x14"x 14"x14"W".

Cage
Cage for narrow body globes (10" dia.) is constructed of die-cast 360 aluminum alloy with hinged door providing 180° entry into the fitter lower. Solid rectangular bars on each of cage. Height of cage is 17" and width of cage is 10". Finish is powder coated to your specification.

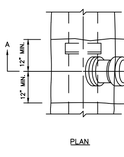
Pods
Wiring block to accept three #8 solid or stranded wires keep cast aluminum post securely in place. Pod is secured to the fitter by stainless steel set screws (Hex head or Allen head as specified) for mounting to 3" O.D. post tenon. Glass holder has an interior water trap to prevent water from entering ballast compartment. Glass is secured to holder by 5/16-18 black cadmium stainless steel fasteners (Hex head or Allen head as specified). All hardware is to be stainless steel captive

Optional Decorative Pods
Octagonal fitter (A) is constructed of die-cast 360 aluminum alloy with bottom-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (3"H x 1"W x 1"W).

Round fitter with sculptured petals (B)
is constructed of die-cast 360 aluminum alloy with side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (3"H x 1"W x 1"W).

Fluted tapered hourglass fitter (D)
is constructed of 356 HM High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell. (3"H x 1"W x 1"W).

Smooth tapered hourglass fitter (D)
is constructed of 356 HM High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell. (3"H x 1"W x 1"W).



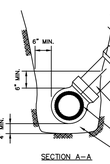
Tapered fluted fitter with sculptured flower petals (E) is constructed of 356 HM High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell (10"H x 1"W x 1"W).

Tall round fluted fitter (G) is constructed of die-cast 360 aluminum alloy with removable door providing entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (14"H x 1"W).

Round contemporary fitter (H) is constructed of 356 HM High-Strength, Low-Copper cast aluminum. Optional internal twist-lock photocell receptacle or optional internal button eye photocell. Easy access to photo eye through the door on the pod (10"H x 1"W).

Round fluted long fitter (L) is constructed of 356 HM High-Strength, Low-Copper cast aluminum with a side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or button eye photocell. Two easy access to photo eye through the door on the pod (15"L x 1"W x 1"W).

Decorative leaf fitter with sculptured petals (P) is constructed of die-cast 360 aluminum alloy with side-hinged door providing 180 degrees entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (15"L x 1"W x 1"W).



Tall round fluted fitter (G) is constructed of die-cast 360 aluminum alloy with removable door providing entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (14"H x 1"W).

Round contemporary fitter (H) is constructed of 356 HM High-Strength, Low-Copper cast aluminum. Optional internal twist-lock photocell receptacle or optional internal button eye photocell. Easy access to photo eye through the door on the pod (10"H x 1"W).

Round fluted long fitter (L) is constructed of 356 HM High-Strength, Low-Copper cast aluminum with a side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or button eye photocell. Two easy access to photo eye through the door on the pod (15"L x 1"W x 1"W).

Decorative leaf fitter with sculptured petals (P) is constructed of die-cast 360 aluminum alloy with side-hinged door providing 180 degrees entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (15"L x 1"W x 1"W).

Finials
All finials are cast aluminum mounted with 1/4-20 stainless steel threaded studs. Standard finial is Ball finial. Optional finials finish as specified. Finish is Powdercoat to customer.

Fasteners
Used to secure post fitter to post tenon and globe to globe holder: Hex Head (T) and Allen Head (A) are both Electro Hexture Black cadmium stainless steel.

Light Engine
LED grid is composed of five plain components: Base, Sink, Lens, LED lamp, Optical System, and Driver. Electrical components are RoHS compliant.

LED Engine
Composed of high-performance white LEDs. Color temperature as per ANSI/NEMA (on - Neutral White, 4000 kelvin nominal (3985K to 4509K) or 3000 kelvin nominal (2870K to 3220K), CRI 70 Min. 75 Typical.

Heat Sink
Made of cast aluminum optimizing the LEDs efficiency and life. Product does not use any cooling device with moving parts (only passive cooling device).

Future Proof Control
R7 - Receptacle with 7 pin enabling dimming and additional functionality (to be determined). Can be used with a twist lock nute or a shorting cap. Will ship with a shorting cap installed for ease of wiring. Remove shorting cap when you're ready to install your node.

Optical System
2= Type 2
3= Type 3
3L= Type 3 with House side shield
3HL= Type 3 with House side shield
3W= Type 3 Wide
3WHL= Type 3 Wide with House side shield
4= Type 4
5= Type 5

Above options are all composed of high performance optical grade PMMA acrylic refractor lenses to achieve desired distribution optimized to get maximum spacing, target lumens and a superior lighting uniformity. Optical system is sealed to IP66 to protect against dust and water. LM-79, LM-79 and TM-15 (IESNA) certifying its photometric performance. Street side indicated.

Surge Protection
Surge protector tested in accordance with ANSI/IEEE C62.41 per ANSI/IEEE C62.41.2 Scenario I Category C High Exposure 10kV/10kA waveforms for Line-0-ruund, Line-Neutral and Line-Neutral. Surge protector tested per DOE (US Department of Energy) MSSLC (Municipal Solid State Street Lighting Consortium) solid state lighting (SSL) recommended practice for electrical immunity requirements for High Test Level 10kV / 10kA. Option for SP2 20kV/20kA.

Finish
Color in accordance with the ASMA 2603 standard. Application of polyester powder coating. Super durable TGIC polyester, 2.5 mil minimum of bakeware. The Thermosetting resins provides a discoloration resistant finish, superior gloss and color fastness. The finish as well as outer retention in keeping with the ASTM D523 standard and humidity proof in accordance with the ASTM D2247 standard. The surface treatment achieves a minimum of 1000 hours salt spray resistance testing and accordance with testing performed and per ASTM B117 standard.

Luminaire's Useful Life
The LED's high efficacy, energy consumption and delivered lumens for each option. Based on IESNT in situthermal testing in accordance with LM-80 and TM-21 projections, using LM-80 data from LED manufacturers and engineering estimates. Luminaire's useful life is expected to reach 70,000+ hours with >L70 lumen maintenance @ 25°C. Luminaire useful life accounts for LED lumen maintenance and additional factors, including LED life, driver life, PCB substrate, solder joints and flexpoints and burning hours for nominal applications.

Driver Options
4RD: Sensor Ready Driver including SR functionality but with 4 hrs dimming and other functionalities, 24V auxiliary supply and a signal signal input (LSI) not connected to the top NEMA twist lock receptacle.
5RDR: Sensor Ready Driver including SR functionality but with 5 hrs dimming and other functionalities but with 24V auxiliary supply and a signal signal input (LSI) not connected to the top NEMA twist lock.
DA: 4 Hrs 25% Reduction
DB: 4 Hrs 50% Reduction
DC: 4 Hrs 70% Reduction

Predicted Lumen Performance Data

Predicted lumen depreciation data*			
Ambient Temperature (°C)	Driver no.	Calculated L(p)hours^	Lumen Maintenance % at 60,000 hours
25°C	up to 1050 mA	>100,000 hrs	92.49%

1. Predicted performance derived from LED manufacturer's lateral exposure to design estimates, based on IESNA LM-80 methodology. Actual exposure may vary due to field application conditions.
2. Per IESNA TM-21 methodology and based upon operating at 25°C ambient.
3. Calculated per IESNA TM21-11. Published L_xxxx hours limited to fifteen times (15) test hours.

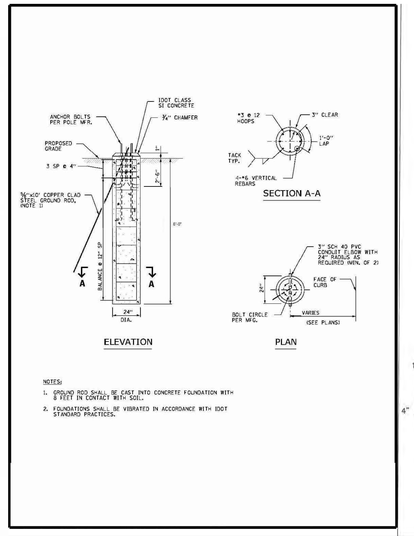
LED product is manufacturing standard
This electronic component is in accordance to the standard document IEC 62031 and has light emitting diodes (LEDs) are in accordance in compliance with IEC61347-1 and ANSI/ESD S20.20 standards so to eliminate ESD events that could decrease the useful life of the product.

Quality Control
The manufacturer must provide a written commitment to ISO 9001:2008 and ISO 14001:2004 International Quality standards Certification.

Vibration Resistance
Meets the ANSI C136.31-2001, American National Standard for Roadway Luminaire's Vibration specifications for normal Applications.

Certifications and Compliance
UL listed to Canadian safety standards for luminaires and poles in accordance with CSA Standards UL 8750 and UL8750 compliant. ETL listed to U.S. safety standards for wet locations: cETL listed to Canadian safety standards for wet locations. LM80 & LM79 tested.

IP Rating: The LED optics chamber is IP66 rated. The LED driver is IP66 rated.



Warranty: 5-year extended warranty.

FIRE STROBE 2000

EMERGENCY VEHICLE STROBE DETECTOR

The FIRE STROBE 2000 provides rapid access to automatic gates and secured areas. The FIRE STROBE 2000 opens gates when activated by an emergency vehicle equipped with the standard operational strobe. The most common frequency is (1440).

Now with STROBEWATCH™.

FEATURES:

RAPID DETECTION OF ANY EMERGENCY STROBE

- Fire
- Paramedics
- Police
- 911 Response Vehicles
- Double and Quad Flash Strobes
- 100% Digital

FIELD PROGRAMMABLE

- Coated Optics
- 2 Relay Outputs
- Relay Timing

EASE OF INSTALLATION

- FIRE STROBE 2000 can be installed on any existing gate system
- Sensitive photodiode complete with PVC housing and lens assembly can be mounted in a variety of ways
- FIRE STROBE 2000 is designed to accommodate AC or DC operation
- Units are provided with a 12 VAC plug in transformer

FIRE STROBE 2000 Technical Specifications

BASIC CONCEPT

The FIRE STROBE 2000 signal is received optically by line of sight. The range varies with the ambient light and intensity of the strobe emitter. A typical range varies from 150 feet to 500 feet. The detector will not allow false operation with unwanted signals from radio interference and/or flashing headlights or loud sounds.

The acquisition time from the emitter light source to the discriminate module is approximately 5 seconds.

The FIRE STROBE 2000 is widely used for security /electric gate access. It can be used for firehouse garage doors and other related access needed by emergency vehicles. This emergency-vehicle strobe detector provides rapid access to any gated community that has been serviced by fire and emergency equipment from the OPTICOM® STROBE SYSTEM.

INSTALLATION & TESTING

Complete installation instructions are provided with the FIRE STROBE 2000 for simple hook-up of the unit to interface with your gate or access control. Two dry contacts are also provided for bi-directional operation where needed.

The photoeye assembly is typically mounted 8 feet to 10 feet above the street level and is aimed for optimal strobe signal. (A total of (2) photoeye assemblies may be used). A 12 VAC power supply is provided with the FIRE STROBE 2000 system.

Testing can be accomplished with the optional fire strobe transmitter tester. This FIRE STROBE 2000 transmitter will enable a throughput of signals from the photoeye assembly to the relay output. This is a hand-held transmitter which operates via 9-volt battery.

TECHNICAL SPECIFICATIONS

1. Frequency 14.035 Hz+/- .25 Hz for class II signals. For OPTICOM® emitters, double, quad flash strobes 140-170 fpm. 100% digital.
2. The FIRE STROBE 2000 is fully compatible with the OPTICOM® priority control emitter.
3. Now with Strobewatch™ programmable for double and quad flash, vehicle mounted strobes. These are usually found on police and other emergency vehicles.
4. The strobe acquisition time is .5 seconds.
5. The PC board construction is mounted in the enclosed 8" x 8" x 4" rain-tight NEMA J-Box.
6. The weight is approximately seven pounds.
7. The power requirements are 12/24 volts AC/DC non-polarity conscious, approximately 1 watt draw.

WARRANTY

The FIRE STROBE 2000 has a one year warranty when used according to the manufacturer's specifications. This warranty does not apply when the FIRE STROBE 2000 has been abused, over voltaged, or altered in any way. The warranty coverage is at the sole discretion of the manufacturer. This unit is to be used only for the operations described above.

*OPTICOM is a trademark of 3M

INSTALLATION

⚠CAUTION

- *To AVOID damaging gas, power or other underground utility lines, contact underground utility locating companies BEFORE digging more than 18 inches (46 cm) deep.*
- ALWAYS wear protective gloves and eye protection when changing the battery or working around the battery compartment.

Installation Tips

Do's

- Weld a horizontal bar across entire gate on any installation for strength. Make sure that the operator is mounted level or it will not function properly.
- Make sure there is slack in the operator cable.
- The operator can be mounted on top of the gate frame.
- The operator must be installed at least 12" (30 cm) from the ground.

Don'ts

- DO NOT install upside-down.
- DO NOT install next to sprinklers or any area that may expose the bottom of operator to water.
- DO NOT install on uphill or downhill gates.
- DO NOT install on ANY pedestrian passageways, doorways, or gates.
- DO NOT over-bend the operator cable. Doing this will cause the wires to eventually break.
- DO NOT weld the crossbar on just a few pickets, or they could bend.

INSTALLATION

Large Metal Control Box

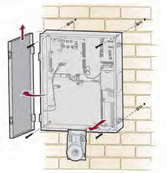
The control box MUST be mounted within 5 feet (1.52 m) of the gate operator. Mount the control box as high as possible for best radio reception. Make sure the control box is level.
NOTE: *The Large Metal Solar Control Box (Model XLSOLARCONTUL) does not have the electrical outlets or the expansion board shown in the images.*

Wall or Column Mount

1. Open the control box. The control box door may be removed by opening the door 90°. Lift the door from the hinges and set aside until the installation is complete.
2. Remove the toroid assembly from the control box by loosening the three screws and lifting the assembly up and out.
3. Use knock outs located at the 4 corners of the control box and knock out using a screwdriver and hammer.
4. Secure the control box to mounting surface using the provided screws (4).

Post Mount

NOTE: *The post mount option is not recommended for the 33AH battery application.*



1. Open the control box. The control box door may be removed by opening the door 90°. Lift the door from the hinges and set aside until the installation is complete.
2. The control box can be mounted to a post with 'U' bolts (refer to chart). The knock out will accommodate a 3/8" diameter 'U' bolt. Select center mounting holes (top and bottom) and knock out using a screwdriver and hammer.
3. Secure the control box to mounting surface with U-bolts and rubber washers (not provided) to ensure a watertight seal.

STANDARD 606001-08

SPECIAL PROVISION FOR DETECTABLE WARNINGS (SPECIAL)

Effective: *10/01/18 (Modification of IDOT D1 Special Provision for Detectable Warnings (Special) in City of Chicago)*
Revised: *4/13/21 (added Galvanized and Stainless Steel material options)*

Description:

Work under this item shall consist of installing cast iron or steel detectable warning tiles as shown on the plans. Work shall be performed according to Section 424 of the Illinois Department of Transportation Standard Specifications for Road and Bridge Construction, except as herein modified.

Materials:

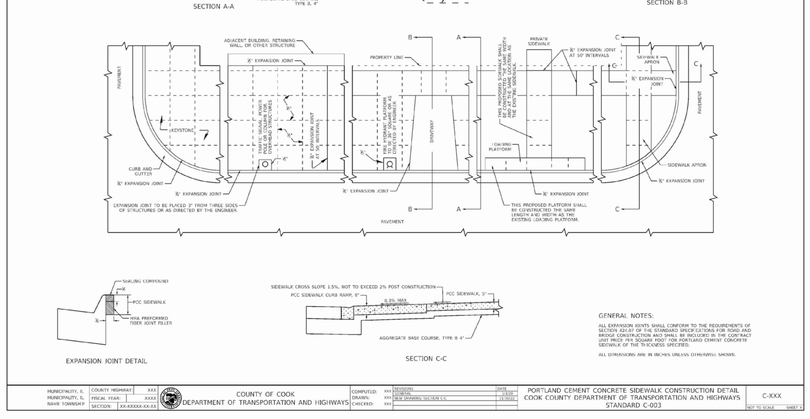
Detectable warning tiles shall be of uniform quality, and free of surface defects. The detectable warnings shall be constructed out of one of the following:
1) Cast iron meeting requirements of ASTM A 48 Class 30 or better.
2) Galvanized steel – 10 gauge, C90 galvanization or better
3) Stainless steel – 10 gauge or better

The dome size and spacing of the detectable warnings shall meet all requirements of sections R305.1.1 and R305.1.2 of PROWAG.

The color of the detectable warning tiles is to be approved by the Engineer unless otherwise specified in the plans and comply with the requirements of section R305.1.3 of PROWAG.

If a concrete border is required for installation of the detectable warnings, it shall comply with section R305.2 of PROWAG.

Responsibility of the Contractor:



The contractor shall verify all dimensions with the product manufacturer. If using radial units, the contractor shall verify that the radius of the detectable warnings supplied by the manufacturer matches that of the curb radius.

The contractor shall ensure that the supplied detectable warnings allow placement of the rows of domes that are aligned parallel with the path of travel. Where detectable warnings are radial, dome orientation is not significant.

The contractor shall ensure a maximum vertical transition of ¼" between the edge of the detectable warnings and adjacent concrete.

Measurement and Payment:

This work will be paid for at the contract unit price per square foot for DETECTABLE WARNINGS (SPECIAL).

THE OWNER OF HERITAGE CROSSING SUBDIVISION, MCNAUGHTON DEVELOPMENT, LLC. WITH FACILITIES AS SHOWN ON THIS EXHIBIT (EXHIBIT R), SHALL ASSUME RESPONSIBILITY FOR THE FOLLOWING MAINTENANCE ACTIVITIES, UNTIL SUCH TIME WHERE CERTAIN REQUIREMENTS ARE MET. STORM WATER RETENTION AND DETENTION FACILITIES SHALL BE OWNED AND MAINTAINED BY THE HOMEOWNERS ASSOCIATION (H.O.A.)

GRAPHIC SCALE
30 0 15 30
(IN FEET)
1 inch = 30 ft.

1. General
Regular inspections and routine maintenance of general areas shall be performed on a monthly or as-needed basis. Specific items of concern include:
- X Litter and debris shall be controlled
- X Landscaped areas shall be maintained with regular mowing and restored with appropriate seeding/vegetation as necessary
- X Accumulated sediment shall be disposed of properly, along with any wastes generated during maintenance operations
- X Riprap areas shall be repaired with the addition of new riprap, as necessary, of similar size and shape
- X Roads shall be swept, vacuumed and/or washed on a regular basis

2. Stormwater Management Facilities
All components of the stormwater management facilities shall be checked monthly between March and November and maintained as necessary to ensure proper performance. It is critical that all inflows and outflows to the detention facility are clean and performing as designed. In addition, the design volume of the detention facility shall also be maintained. Inspections for the following specific items should be conducted monthly between March and November:

Side Slopes/Embankment/Emergency Overflow Structure
- X Inspect embankments for settlement and erosion
- X Remove woody growth from the embankment
- X Any breaks, hire Registered Professional Engineer for design resolution
- X Seed and sod any eroded areas
- X Signs of piping (leakage) or seepage, repair
- ___ Stabilize emergency overflow structure if erosion observed
- ___ Remove obstructions blocking emergency overflow spillway

Vegetated Areas
- X Regular mowing to control vegetation, no cutting of native vegetation
- X Need for planting, reseeding or sodding. Supplement alternative native vegetation if a significant portion has not established (50% of the surface area). Reseed with alternative grass species if original grass cover has not successfully established.
- X Evidence of grazing, motorbikes or other vehicles, repair
- X Check for invasive vegetation, remove where possible
- X All vegetation must be maintained per the approved planting plan

Outlet Control Structure
- ___ Inspect restrictor and remove debris if clogged or discharge reduced
- ___ Remove accumulated sediment at outlet
- ___ Scour and erosion at outlet, repair and reseed
- ___ Any ice damage to outlet of pipe, repair if necessary
- ___ Condition of trash tracks, remove debris
- ___ Outlet channel conditions downstream

Access for Maintenance Equipment
- X Remove any obstructions placed in maintenance easements

Safety Features
- ___ Access controls to hazardous areas
- X Fences
- X Loose or damaged posts
- X Loose or broken wires
- X Condition of gates
- X Signs

Detention Volume
- X Inspect all stormwater detention facilities to ensure that the constructed volume for detention is maintained. No sediment, topsoil, or other dumping into the facility shall be allowed. Specific locations in the stormwater management system, designed to accumulate sediment, shall be dredged as necessary to prevent sediment from reaching the invert of any gravity outlet pipe.

3. Volume Control Facility
Routine inspections and maintenance of volume control facilities shall be performed by the Owner on a yearly or as-needed basis. Specific items of concern include:
- ___ Facility shall be inspected yearly using the monitoring well to verify the system is functioning properly.
- ___ Surface of permeable pavement shall be cleaned with low-pressure power washer.
- X Accumulated sediment from surface shall be vacuumed out and disposed of properly.
- X Appropriate signage shall be repaired if damaged or illegible.

4. Stormwater Collection System
The Owner shall perform monthly inspections of all components of the stormwater collection system. The monthly inspection shall occur between March and November and include the following specific areas of concern:

Storm Inlets/Manholes
- X Remove accumulated leaves and other debris from grates
- X Reset covers/lids on as-needed basis
- X Remove accumulated sediment from manhole bottom when 50% of sump is filled

Storm Sewers/Culverts
- X Visually inspect pipes by removing manhole lids, make repairs as necessary
- X Storm sewers and culverts shall be checked for siltation deposits at inlets, outlets, and within the conduit, clean out as necessary
- X Restore riprap at outfalls if erosion observed
- X Restore riprap at outfalls
- X Replant and reseed any eroded areas

Overland Flow Routes (Ditches/Swales)
- X Annual visual inspections shall be performed that verify the design capacity of the overland flow routes is maintained. The slope and cross-sectional area of the ditch/swale shall be verified during this inspection.
- X Remove any obstructions that have been placed in the drainage path
- X Seed and sod any eroded areas
- X Restore riprap as necessary
- X Regrade to provide positive drainage as necessary
- X Regular mowing to control vegetation

5. Vegetated Areas
- X Need for planting, reseeding, or sodding. Supplement alternative native vegetation if a significant portion has not established (50% of the surface area after second growing season). Reseed with alternative native grass species if original grass cover has not successfully established.
- X Evidence of grazing, motorbikes, or other vehicles, repair.
- X Check for invasive vegetation, remove when possible.
- X Regular mowing to control vegetation; it is recommended that native vegetation remain uncut.
- X Dead or damaged non-native grassy areas – repair with seeding with fertilization or seeding with mulch.
- ___ Compensatory storage area shall be reseeded with appropriate vegetation according to the approved planting plan.

6. Qualified Sewer Construction
- X Perform manhole inspections once every five years, make repairs as necessary.
- X Perform sewer inspections once every five years, make repairs as necessary.
- X Perform regular cleaning so that each sewer segment is cleaned once every 5 years.
- X Remove any obstructions placed in maintenance easements that may impede maintenance equipment access.

PROJECT SITE SUMMARY

PROPERTY LEGAL DESCRIPTION:

PARCEL 1: THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION BEING A SUBDIVISION OF THE EAST 473 FEET OF THE NORTH 775.5 FEET (EXCEPT THE EAST 145.2 FEET OF THE WEST 178.2 FEET OF THE NORTH 350 FEET THEREOF) OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, IN COOK COUNTY, ILLINOIS.

PARCEL 2: LOT 1 IN VIAL'S FAIRWAY, A SUBDIVISION OF PART OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, ACCORDING TO THE PLAT RECORDED APRIL 17, 1957 AS DOCUMENT 16879637 IN COOK COUNTY, ILLINOIS.

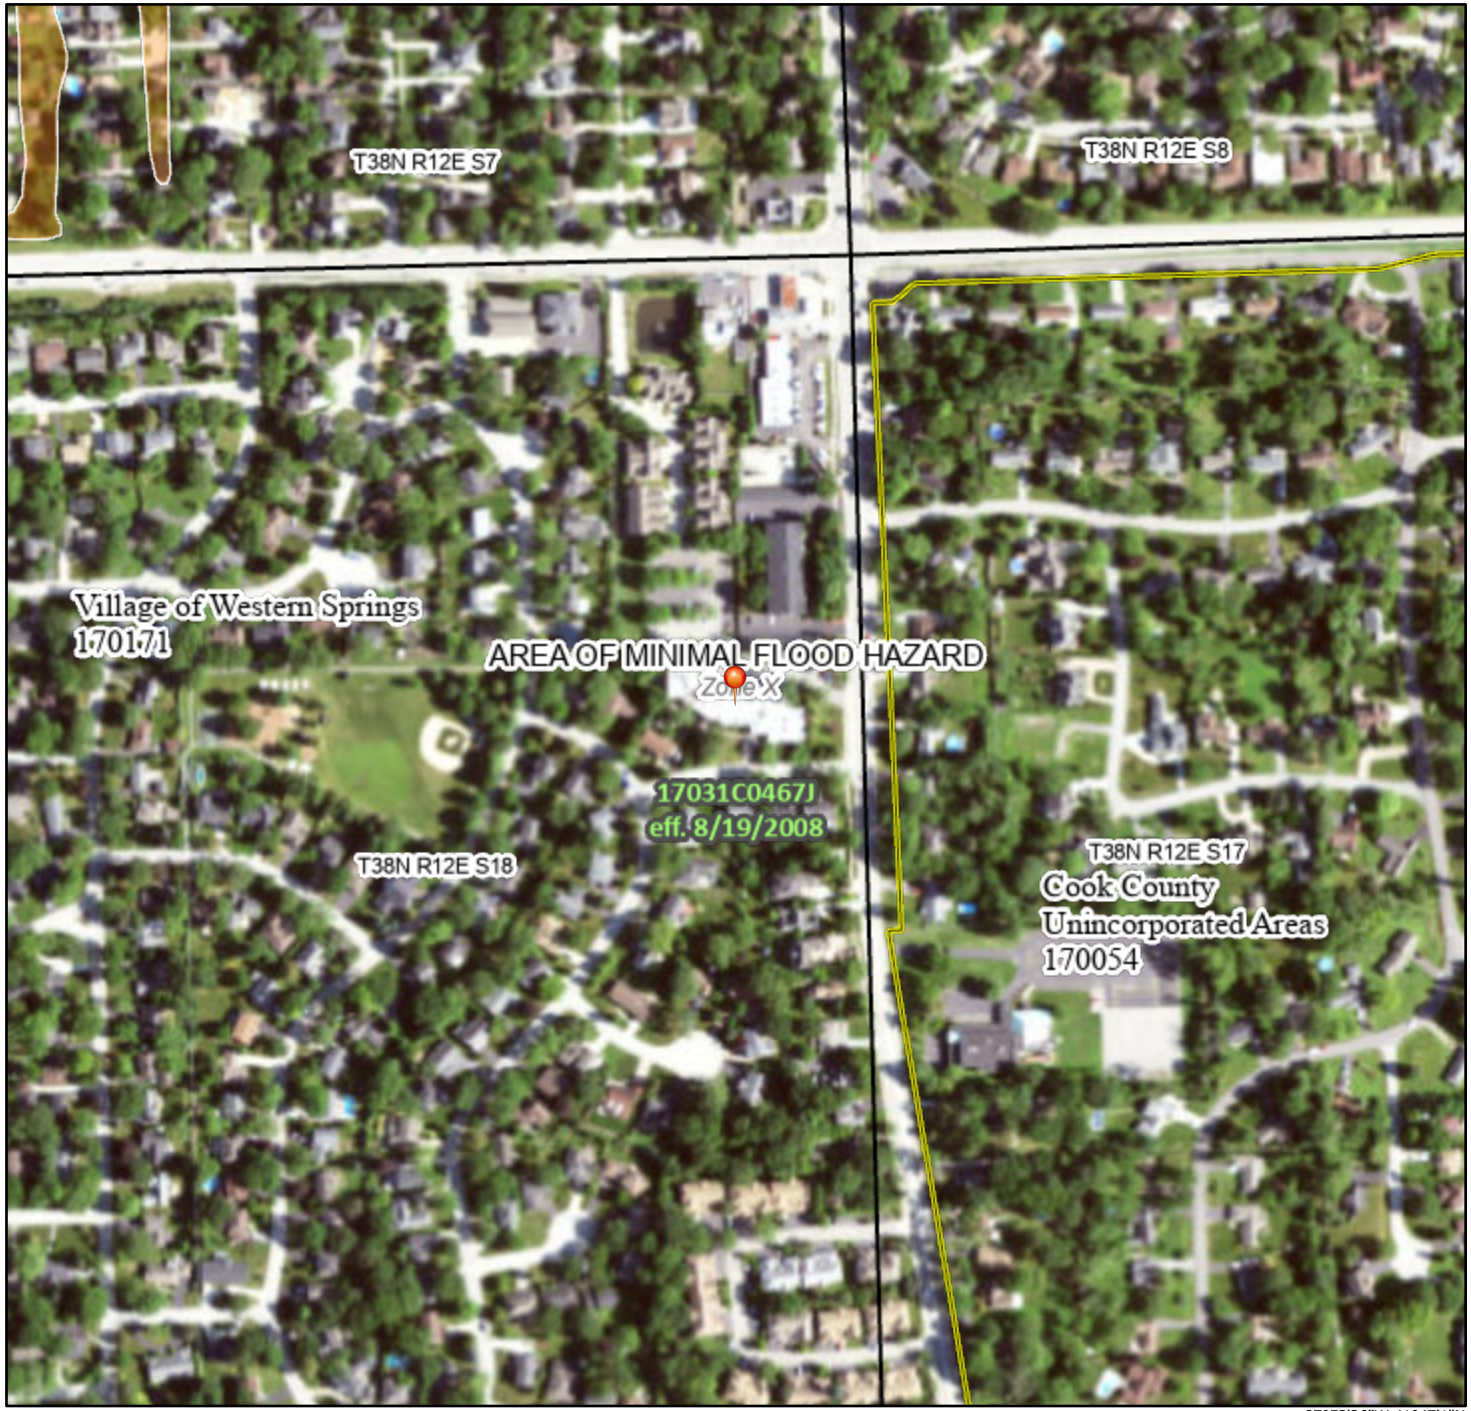
SUMMARY

The Heritage Crossing re-development is approximately 2.41 gross acres with the current use being professional office buildings and associated parking lot areas. An existing stormwater detention basin is located adjacent to the site in a 0.34-acre parcel dedicated as Lawn Avenue. The proposed re-development consists of twenty-nine residential single family attached units with related roadway, utilities, and a stormwater management area. The existing stormwater management facility (South Detention Pond) owned by the Village of Western Springs and maintained by the Heritage Springs HOA will be enhanced to provide the MWRD required volume control elements and will include increased stormwater storage volume to provide additional detention to attenuate more of the off-site upstream stormwater run-off prior to being released downstream. The FEMA FIRM map 17031CO467J effective 8/19/2008 indicates that there are no special flood hazard areas (floodplain) on the subject property (Zone "X"). The intent of this report is to convey the existing site conditions along with the final planning development and calculations that have been completed to support Final Engineering.

The existing site is not located in the FEMA mapped floodplain. Evidence has shown that the existing site and the Heritage Springs subdivision experience flooding during large storm events. DesignTek Engineering was contracted to complete a detailed flood analysis for the detention system maintained by the Heritage Springs HOA. An off-site area of approximately172.3 acres, to the east of Wolf Road was determined to be tributary to the subject site via an existing 4'x6' concrete box culvert that crosses under Wolf Road. The upstream off-site area is developed, and the area was divided into two sub-areas. They were delineated as Ashbrook Subdivision and LaGrange Highlands offsite with areas 42.90 acres and 129.40 acres, respectively. Time of concentrations and curve numbers were calculated for each area. MWRD permit number 99-0525 was obtained for the Ashbrook Subdivision. This information was used in HEC HMS computer modeling software to analyze the system and determine a 100-year critical duration peak flowrate of 359.61 cfs. This occurs during the 1-hour event. The high-water level (HWL) for the existing detention basin (basin C) was determined to be 655.16.

To allow for the required Cook County DOTH site distance requirements the existing box culvert under Wolf Road will be extended 66 feet away from the proposed Heritage Court intersection. A bypass system will be constructed to collect and convey the peak discharge through a proposed 4'x6' concrete box culvert. The box culvert matches the upstream condition. The calculated peak HWL was determined to be 655.11 for the proposed condition. This is a reduction of 0.05'. The site will be inundated with water at the north end of Heritage Court, near the property line. Under existing conditions this area was also inundated with water. The proposed condition will have no significant impacts when compared to existing conditions. An interim swale will be constructed on site to convey the discharge during rainfall events during the construction of the bypass system. The swale was designed to carry the peak discharge.

The existing condition (professional office buildings) has a total impervious area of 1.67 acres with the proposed re-development (residential) consisting of 1.50 acres equating to a total reduction in impervious area of 0.17 acres or 10%. Utilizing the proposed impervious area within the re-development site, the required MWRD volume control storage has been calculated to be 0.13 ac-ft. This volume is proposed as surface storage (elevations 647.0 – 648.0) below the NWL in the stormwater management pond and has a proposed volume of 0.15 ac-ft. A PVC underdrain is proposed below the volume control area. Recent soil investigation for the existing south detention pond revealed that the Estimated Seasonal High Groundwater Table (ESHGWT) is at



elevation 644.0, 3’ feet below the proposed pond bottom. See enclosed Soil Investigation Report within the appendix section of this report for reference.

The previously issued MWRD permit (99-228) for the original development was obtained and is included in the appendix for reference. Upon examination the detention review sheet within the permit does not depict any detention volume requirements for the original development. Although the as-built plan dated (09-29-2007) for the original development depicts the volume provided for the subject “South Detention Pond” as 0.729 Ac-Ft. and based on the recent topographic survey for the proposed re-development we have calculated the South Detention Pond storage volume to currently be 0.76 Ac-Ft. which appears to match the original intent. Initial conversations with Village staff revealed that even though the re-development has a decrease in impervious area they have experienced stormwater flooding issues off-site and further downstream within the same tributary of the subject site and expansion of the existing stormwater facility, if possible, would be a regional benefit. Taking this into account the proposed re-development will include an expansion of the South Detention Pond volume to 1.64 Ac-Ft increasing the storage volume by 0.85 Ac-Ft which essentially doubles the volume. The 100-year peak flowrate for the development site will also be reduced to 13.96 cfs from the existing condition of 15.64 cfs (+/- 11% reduction). The proposed residential buildings also will not have basements and therefore no sump pump discharges will be tributary to the stormwater management area.

Custom Soil Resource Report for Cook County, Illinois

Heritage Crossing

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cook County, Illinois
Survey Area Data: Version 17, Aug 28, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 13, 2020—Jul 6, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Cook County, Illinois

854B—Markham-Ashkum-Beecher complex, 1 to 6 percent slopes

Map Unit Setting

National map unit symbol: 28shj
Elevation: 510 to 930 feet
Mean annual precipitation: 28 to 40 inches
Mean annual air temperature: 45 to 52 degrees F
Frost-free period: 140 to 180 days
Farmland classification: Not prime farmland

Map Unit Composition

Markham and similar soils: 40 percent
Ashkum and similar soils: 30 percent
Beecher and similar soils: 25 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Markham

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Summit, backslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Thin mantle of loess or other silty material and in the underlying till

Typical profile

H1 - 0 to 8 inches: silt loam
H2 - 8 to 21 inches: silty clay loam
H3 - 21 to 32 inches: silty clay loam
H4 - 32 to 60 inches: silty clay loam

Properties and qualities

Slope: 1 to 6 percent
Depth to restrictive feature: 20 to 55 inches to densic material
Drainage class: Moderately well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 24 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 30 percent
Available water supply, 0 to 60 inches: Low (about 5.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Ecological site: R110XY010IL - Moist Glacial Drift Upland Savanna
Hydric soil rating: No

Description of Ashkum

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Concave
Parent material: Colluvium and in the underlying till

Typical profile

H1 - 0 to 12 inches: silty clay loam
H2 - 12 to 29 inches: silty clay
H3 - 29 to 54 inches: silty clay loam
H4 - 54 to 60 inches: silty clay loam

Properties and qualities

Slope: 1 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Calcium carbonate, maximum content: 25 percent
Available water supply, 0 to 60 inches: High (about 9.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Ecological site: R110XY008IL - Wet Glacial Drift Upland Prairie
Hydric soil rating: Yes

Description of Beecher

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Backslope, footslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Thin mantle of loess or other silty material and in the underlying till

Typical profile

H1 - 0 to 7 inches: silt loam
H2 - 7 to 24 inches: silty clay loam
H3 - 24 to 36 inches: silty clay loam
H4 - 36 to 60 inches: silty clay loam

Properties and qualities

Slope: 2 to 4 percent
Depth to restrictive feature: 24 to 45 inches to densic material
Drainage class: Somewhat poorly drained

Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 35 percent
Available water supply, 0 to 60 inches: Low (about 5.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C/D
Ecological site: R110XY010IL - Moist Glacial Drift Upland Savanna
Hydric soil rating: No

Minor Components

Orthents, clayey

Percent of map unit: 5 percent
Landform: Lake plains, ground moraines
Landform position (two-dimensional): Summit, backslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: F095XB010WI - Loamy and Clayey Upland
Hydric soil rating: No

Soil Investigation Report
5600 S. Wolf Road
Western Springs, IL

AET Project Number: Geo – 9951

Gentleman / Madam,

Associated Engineering & Technology, Inc. (AE&T) has completed two (2) soil borings and sampling of soils to determine the Estimated Seasonal High Groundwater Level (ESHGWL) at the above referenced site in Western Springs, IL. The borings were done at the existing detention pond area and the locations are shown in the appendix of this report. The soil samples were analyzed in the laboratory for soil description, visual classification and moisture content by a geotechnical engineer. Munsell Chart and FEMA maps were also used to estimate the seasonal high groundwater elevations. Based upon our investigation the ESHGWL was noted to be at six (6) feet below the bottom of existing pond.

If you have any questions regarding this report, please contact us.

Sincerely,
Associated Engineering & Technology, Inc.

Ashok Medhi, M.S.
Geotechnical Engineer

Toby C. Mickey, P.E.
Senior Engineer

1.0 SOIL BORING

A total of two (2) soil borings were done were done at the proposed development to 10 feet depth each in accordance with American Society for Testing and Materials procedure for Standard Penetration Test and Split Barrel Sampling of Soils (ASTM 1586). The borings were done with a CME 45 drill rig mounted on All-Terrain Vehicle.

The soil samples were collected at 2-1/2 feet interval to a depth of 10 feet and thereafter at 5 feet interval. The boreholes were backfilled with auger cuttings after completion of drilling.

The soil samples were placed in glass containers and brought to our laboratory. A site plan showing the approximate soil boring locations is included in appendix. Log of the soil borings along with lab classifications are included in Appendix B.

2.0 LABORATORY TESTING

All samples were visually classified according to the Unified Soil Classification System (ASTM D-2488) by a geotechnical engineer. The Auger boring samples are disturbed and were generally used for classification testing (D2487, D2488), moisture content and pocket penetrometer test (ASTM D 854) to evaluate unconfined compressive strength for clayey and clayey silt soils. The primary purpose of this investigation was to determine the Estimated Seasonal High Groundwater Elevation. The boring logs with soil description are included in the Appendix.

3.0 SOIL DESCRIPTION & ANALYSIS

The sub-surface materials in the borings (B-1 & B-2) comprised 8 to 10 inches of black topsoil with roots.

It was underlain by very stiff to hard moist **brown silty Clay** with fine sand and gravel (CL) to depths of about 6.0 feet. Beneath it, medium dense moist **brownish gray fine to medium Sand** trace small gravel (SP) was noted to depths of 8 feet and changed color to **gray** Fine Sand trace small gravel (SP) to the boring depths of 10 feet.

Groundwater was **not** encountered during and after completion of the borings.

3.1 Estimated Seasonal High Ground Water Level

The Estimated seasonal high groundwater level (ESHGWL) at Borings B-1 and B-2 located at existing Detention Pond is at about (six) 6 feet. It is based upon visual classification of the soil samples, existing groundwater levels, site topography, soil conditions, color description and change of color from brown to brownish gray at 6 feet, FIRM maps and Munsell chart (10 YR**).**

Note: Soil colors are expressed in terms of hue, value, and chroma, in accordance with the standardized Munsell color system (Soil Survey Staff, 1951). Hue refers to the wavelength, value expresses the degree of lightness or darkness, whereas chroma notes the purity or strength of a particular color (Munsell, 1974). This system is used to describe the matrix or dominant soil color and the blotches of less-prevalent colors commonly called mottles.

Soil colors are commonly associated with the presence or absence of iron. Weathering of soil minerals is a slow process but with time causes the release of mineral constituents to the environment. Soluble weathering-products are removed from the soil profile, while more stable compounds will precipitate. Iron (Fe), released from a mineral, frequently coats soil particles with thin oxide-coatings. Well-aerated soils typically are yellowish brown-colored from these iron-oxide coatings. Depending on the intensity of the weathering cycles, the iron-oxides may display different colors.

5.0 Warranty / Limitations of liability

Associated Engineering & Technology, Inc. understands that the Boring log depicts conditions disclosed at the particular location and date indicated and may vary within 5 feet of vertical and lateral distance from the borings.
If significant variations or changes are in evidence during construction, it may then be necessary to re-evaluate the recommendations of this report.
In no event shall Associated Engineering & Technology, Inc. be liable for any indirect, special, consequential or incidental damages, of any kind or nature however caused and based on any theory of liability, arising out of or relating to this report, whether or not such party has been advised of the possibility of such damages.

MUNSELL SOIL COLOR CHART

Soil colors are expressed in terms of hue, value, and chroma, in accordance with the standardized Munsell color system (Soil Survey Staff, 1951). Hue refers to the wavelength, value expresses the degree of lightness or darkness, whereas chroma notes the purity or strength of a particular color (Munsell, 1974). This system is used to describe the matrix or dominant soil color and the blotches of less-prevalent colors commonly called mottles. Soil colors are commonly associated with the presence or absence of iron. Weathering of soil minerals is a slow process but with time causes the release of mineral constituents to the environment. Soluble weathering-products are removed from the soil profile, while more stable compounds will precipitate. Iron (Fe), released from a mineral, frequently coats soil particles with thin oxide-coatings. Well-aerated soils typically are yellowish brown-colored from these iron-oxide coatings. Depending on the intensity of the weathering cycles, the iron-oxides may display different colors.

GENERAL NOTES

In order to provide uniformity throughout our project, the following system has Been adopted to describe each soil sample. Rock Shale and other materials will be described in detail as encountered.

CONSISTENCY OF COHESIVE SOIL		RELATIVE DENSTY OF GRANULAR SOIL	
UNCONFINED COMPRESSIVE STRENGTH **QU(TSF)**	**CONSISTENCY**	**"N" VALUE (Blows/foot)**	**RELATIVE DENSITY**
<0.25	VERY SOFT	0 – 3	VERY LOOSE
0.26 – 0.49	SOFT	4 – 9	LOOSE
0.50 – 0.99	MEDIUM STIFF	10 – 29	MEDIUM DENSE
1.00 – 1.99	STIFF	30 – 49	DENSE
2.00 – 3.99	VERY STIFF	50 – 80	VERY DENSE
4.00 – 8.00	HARD	>80	EXTREMELY DENSE
> 8	VERY HARD		

- **Number of blows per foot required to drive a 2" O.D. split-spoon sampler using a140lb. Weight falling free for 30 inches, except where otherwise noted.**

COLOR AS DETERMINED ON THE FRESH, MOST SAMPLES

PREDOMINATE COLORS		SHADES	MODIFYING ADJECTIVE

Worksheet 3: Time of Concentration (T_c) or Travel Time (T_t)

Project: Heritage Crossing By: AJS Date: 10/31/2024

Location: Western Springs Chkd: SDS Date: 10/31/2024

Conditions (i.e. Present / Developed) Existing conditions - LaGrange Highlands Off-Site 129.4 Acre

NOTES: Space for as many as two segments per flow type can be used for each worksheet.
Include a map, schematic, or description of flow segments.

Sheet Flow: (Applicable to T_c only)		Segment ID	AB			
1 Surface Description (Table 3-1)			grass			
2 Manning's Roughness Coeff., '**n**' (Table 3-1)			0.24			
3 Flow Length, **L** (Total < 300 ft)		ft	100			
4 Two-year, 24-hour Rainfall, P_2		in	3.34	3.34		
5 Land slope, **S**		ft / ft	0.0200	0.0100		
6 $T_t = \frac{0.007\,(nL)^{0.8}}{P_2^{0.5}S^{0.4}}$	Compute T_t	hr	0.23	+ 0.00	=	0.23

Shallow Concentrated Flow:		Segment ID	BC			
7 Surface Description (paved or unpaved)			unpaved			
8 Flow Length, **L**		ft	2028			
9 Watercourse slope, **S**		ft / ft	0.0180			
10 Average Velocity, **V** (Figure 3-1)		ft / s	2.2			
11 $T_t =$ **L** / 3600**V**	Compute T_t	hr	0.26	+	=	0.26

Channel Flow:		Segment ID	CD			
12 Cross Sectional Flow Area, **a**		ft^2				
13 Wetted Perimeter, p_w		ft				
14 Hydraulic Radius, **R** = **a**/p_w		ft				
15 Channel Slope, **S**		ft / ft				
16 Manning's Roughness Coeff., '**n**'						
17 **V** = [1.49$R^{2/3}S^{1/2}$]/**n**		ft / s	3	3		
18 Flow Length, **L**		ft	3436	0		
19 $T_t =$ **L** / 3600**V**	Compute T_t	hr	0.32	+ 0.00	=	0.32
20 Watershed or Subarea T_c or T_t (add T_t in steps 6, 11, and 19)					hr	**0.81**

SECTION 1

Storm Water Management Summary

Storm Water Management Summary

Existing Conditions:

The subject 37.9 acre property is located along the east side of Wolf Road between 60th and 63rd Streets in Indian Head Park, Illinois (refer to the location map included in this section). The site is lightly wooded and currently consists of a par three golf course with a small clubhouse building and gravel parking lot. It is bounded by single family homes to the west, north and east and the Acacia multi-family development along its entire southern border. Except for approximately one half acre in the southeast corner of the property, the parcel drains unrestricted in a northerly direction to a pair of 12" diameter storm sewer pipes at the north boundary which in turn discharge to an existing 24" x 18" corrugated metal pipe under 60th street. This culvert then conveys storm water to a drainage swale which flows northerly to Plainfield Road.

There are approximately 6.2 acres of tributary watershed to the west and south of the site (refer to the USGS map copies in section 3). This upstream area is comprised of three separate drainage areas. The first two are approximately 3.4 and 1.3 acres in size and drain to the property through separate 18" diameter culverts under Wolf Road. The third off-site area consists of an estimated 1.5 acres of rear yards of the adjacent Acacia development along the south boundary of the property. Record drawings for the Acacia development indicate that the majority of that site now drains to the southeast and away from the proposed Ashbrook Subdivision.

Proposed Development Conditions:

The proposed Ashbrook Subdivision will occupy 36.4 acres of the 37.9 gross acreage, with 1.5 acres being dedicated to the Wolf Road right-of-way. The development will consist of 25 multi-family buildings containing a total of 112 townhome units and 54 single family home sites. Wolf Road will be widened to provide a left turn lane into the site.

A proposed storm sewer system and drainage swales will convey storm water to three on-site storm water retention ponds which will provide the necessary detention storage in the event of a 100-year frequency storm event. The high water level on each of the three retention ponds has been designed at a minimum of 1.5 feet below the lowest adjacent proposed foundation elevation. Each pond will contain an overflow weir to accommodate the appropriate off-site 100-year bypass flow without exceeding a flow depth of 0.5 feet. The discharge from each pond will be restricted by a circular orifice cut into a metal plate permanently mounted (in accordance with MWRD regulations) over the outflow pipe inside of a downstream catch basin. The site release has been reduced beyond typical allowable rates so that only one of the two existing downstream 12" diameter storm sewer pipes will be needed to convey it. Finally, the existing 24" x 18" culvert under 60th Street, which is in poor condition, will be replaced with a brand new pipe of the same material and size.

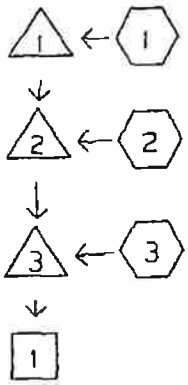
Storm Water Management Calculations:

HydroCAD storm water modeling software, which employs the SCS TR-20 and TR-55 methods, was utilized along with Bulletin 70 rainfall intensities in determining the 100-year storm runoff hydrographs for the site and routing the resultant flows through the proposed retention ponds. Section 2 includes all data calculated for basin characteristics, times of concentration, runoff hydrographs, detention storage, and pond routing. The off-site bypass flows were calculated using the rational method and Bulletin 70 rainfall intensities and are shown in Section 3. Storm sewers on the site have been designed, utilizing the rational method and the Bulletin 70 rainfall data to convey a 10-year frequency storm flow. The calculations for these are in Section 4. Supporting technical reference data can be found in Section 5.

The primary calculated hydrologic information is as follows:

POND	TRIBUTARY BASIN AREA (Ac)	N.W.L. ELEV.	H.W.L. ELEV.	STORAGE VOLUME (Ac-Ft)	RESTRICTOR ORIFICE DIAMETER (in)	MAX.100-YR STORM RELEASE (cfs)
1	17.57	694.5	701.0	5.1	10.0	4.2
2	11.02	691.5	698.0	5.2	9.0	3.5
3	8.07	688.5	695.0	4.5	5.7	2.2

Total Development Area = 36.4 Ac



Total Proposed Detention Volume = 14.8 Ac-Ft

Proposed Site Release = 2.2 cfs (0.06 cfs/Ac)

SCALE

SITE BYPASS FLOW

1. OFF-SITE AREA A ≈ 3.4 Ac ON WEST SIDE OF WOLF RD. (SEE ATTACHED USGS MAP'S)

ASSUME T_c = 20 MIN & C = 0.60

Q_{100} = C · I · A = 0.60 × 6.9"/HR × 3.4 ≈ 14.1 cfs

2. OFF-SITE AREA B ≈ 1.3 Ac ON WEST SIDE OF WOLF ROAD (SEE ATTACHED USGS MAPS)

ASSUME T_c = 20 min & C = 0.60

Q_{100} = 0.60 × 6.9"/HR × 1.3 ≈ 5.4 cfs

3. OFF-SITE AREA C ≈ 1.5 Ac ALONG ACACIA DEVELOPMENT TO SOUTH (BASED ON 1275' × 50' AVG BACK YARD AREA. REMAINING PORTION OF ACACIA DRAINS TO SOUTH PER SITE RECORD DRAWINGS.)

ASSUME T_c = 10 min & C = 0.50

Q_{100} = 0.50 × 10.02"/HR × 1.5 ≈ 7.5 cfs

∴ BYPASS FLOW THROUGH POND #1 = 5.4 + 7.5
= 12.9 cfs

BYPASS FLOW THROUGH POND #'S 2 & 3 = TOTAL BYPASS FLOW
= 27.0 cfs

Proposed Conditions

Curve Number

Project: Heritage Crossing By: AJS Date: 8/26/2024

Location: NE Corner of Wolf Road and Park Place Chkd: SDS Date: 8/26/2024

Conditions (i.e. Present / Developed): Proposed

Curve Number

Soil Name and Hydrologic Group (Appendix A)	Cover Description (cover type, treatment, and hydrologic condition; percent impervious; unconnected/connected impervious area ratio)	CN			Area ☑ acres ☐ mi² ☐ %	Product of CN x Area
C	Lawn, good condition (grass cover > 75%)	74			1.0008	74.06
C	Pavement, Parking, Curb and Gutter	98			0.3374	33.07
C	Carriage Walk	98			0.0644	6.31
C	Driveways	98			0.2829	27.72
C	Stoops & Patios	98			0.0681	6.67
C	Buildings	98			0.6564	64.33
				Totals =	2.4100	212.16

* Use only one CN source per line.

CN (weighted) = $\frac{\text{total product}}{\text{total area}} = \frac{212.16}{2.4100} = 88.03$; use CN = **88.03**

FULL-DEPTH HMA PAVEMENT
DESIGN CALCULATIONS FOR LOCAL PUBLIC AGENCIES
Figure 44-4N

HARD COPIES UNCONTROLLED

40. Traffic Factor (TF). The total number of 18-kip equivalent, single-axle load applications anticipated in the design lane during the design period, expressed in millions.

41. Untied Shoulder. Any shoulder that does not provide edge support. The shoulder may consist of earth, aggregate, or bituminous stabilized materials. PCC shoulders that are tied with smaller reinforcing steel than the size indicated in the *Illinois Highway Standards* are considered untied for purposes of determining pavement thickness.

44-1.02 Accessibility Requirements

All pavements constructed shall meet the accessibility requirements in Section 41-6 of this manual.

44-1.03 Basic Mechanistic Design Procedures

Mechanistic pavement design procedures use the actual stresses, strains, and deflections experienced by the pavement to determine its expected fatigue life.

44-1.03(a) Mechanistic Design Factors

Factors that are considered in mechanistic designs include:

- design HMA strain;
- design pavement HMA mixture temperature;
- design HMA mixture modulus (E_{HMA});
- subgrade support rating (SSR);
- design reliability;
- degree of PCC edge support;
- degree of PCC base erosion;
- PCC joint spacing; and
- PCC stresses.

44-1.03(b) Design Period

The level of traffic and type of facility to be constructed affect the selection of the design period. Generally, it is desirable to design highway pavements to carry traffic without necessitating the need for major rehabilitation for a period of 15 to 20 years. However, it may be advantageous to design lesser roadways (e.g., frontage roads, alleys, temporary roads) for shorter periods.

For all pavement types, the minimum design period allowed is 20 years for Class I and II roads and streets. For all pavement types, the minimum design period allowed is 15 years for Class III roads and streets. For Class IV roads and streets with 48 or fewer HCV's, pavement thicknesses provided in each Section 44-2, 44-3, 44-4, and 44-5 should be satisfactory for design periods of 15 years or 20 years.

HARD COPIES UNCONTROLLED

44-1.03(c) Structural Design Traffic

The structural design traffic is the estimated ADT for the year representing one-half of the design period. For example, when the design period is 20 years, the structural design traffic will be an estimate of the ADT projected to 10 years after the construction date.

1. Estimate ADT of PV, SU, and MU. Vehicular classification and traffic volume projections for structural design traffic are based on available traffic data (i.e., ADT). ADT and vehicular classification data for various roadway classes may be obtained from published IDOT traffic maps. If traffic data is unavailable or if published data is dated or does not appear to reflect known conditions or field observations (e.g., land uses, directional distributions), traffic volume and classification studies may be needed to establish a representative base of existing conditions. Factors that compound annual growth typically are used in traffic projections. It is important to consider any future land development or land use changes that may affect the volume or composition of traffic that will use the facility. If vehicular classification data is not available for Class III or Class IV facilities, use the percentages in Figure 44-1A to estimate the number of PV, SU, and MU vehicles from ADT. Also, consider the potential impacts of heavily loaded vehicles, especially in areas near mines, grain elevators, factories, and river ports. It may be necessary to specifically design for such vehicles.

2. Assign Traffic to the Design Lane. Although the sum of the PV, SU, and MU vehicular volumes determined in Step 1 represents the total ADT that will be carried by the highway facility in the year of the projection, the structural design of the pavement will be based on the lane which carries the greatest number of SU and MU vehicles (i.e., the design lane). The distribution factors in Figure 44-1B have been applied to TF equations contained in this chapter. Use the total two-way ADT for multilane facilities when calculating the structural design traffic as the distribution factors account for directional traffic and the percentage of vehicles in the design lane.

   Note that the design lane distribution factors in Figure 44-1B are based on previous traffic studies under average conditions. Unusual traffic control or design features may influence lane usage (e.g., lane restrictions of commercial vehicles, directional influence of major commercial generator). Adjustments may be necessary. Contact the CBLRS for additional guidance.

Class of Road or Street	Percentage of Structural Design Traffic		
	PV (%)	SU (%)	MU (%)
III	88	7	5
IV	88	9	3

TRAFFIC PERCENTAGE
(Class III and IV)

Figure 44-1A

HARD COPIES UNCONTROLLED

PG Binder Grade Selection [1]			
	Traffic Loading Rate (Adjustment)		
Districts 1 – 4	Standard Traffic [2]	Slow Traffic [3]	Standing Traffic [4]
Surface[5]	PG 58-28 [6][7]	PG 64-28 or SBS PG 64-28	SBS PG 70-28
Remaining Lifts[5]	PG 64-22 or PG 58-22	PG 64-22 or PG 58-22	PG 64-22 or PG 58-22
Districts 5 – 9			
Surface[5]	PG 64-22 [6][7]	PG 70-22 or SBS PG 70-22	SBS PG 76-22
Remaining Lifts[5]	PG 64-22	PG 64-22	PG 64-22

Notes:

1. *The binder grades provided in this table are based on the recommendations given in Illinois-Modified AASHTO* MP-2, Table 1, "Binder Selection on the Basis of Traffic Speed and Traffic Level."
2. *Standard traffic is used where the average traffic speed is greater than 43 mph (70 km/h).*
3. *Slow traffic is used where the average traffic speed ranges from 12 to 43 mph (20 to 70 km/h).*
4. *Standing traffic is used where the average traffic speed is less than 12 mph (20 km/h).*
5. *Consideration should be given to increasing the high temperature grade by one grade equivalent when 10 ≤ T.F. ≤ 30. For example, if use of a PG 64-22 is specified for standard traffic, a PG 70-22 or a SBS PG 70-22 should be specified.*
6. *Surface includes the top 2 in. (50 mm) of HMA. The remaining lifts of HMA may be the same PG binder grade as surface; however, this may increase or decrease the pavement design thickness. If multiple PG Binder grades are used in a HMA design, the predominant PG Binder grade should be used for determining HMA Modulus on Figure 44-4H.*
7. *The high temperature grade should be increased by one grade equivalent when T.F. > 30. For example, if use of a PG 64-22 is specified for standard traffic, a PG 70-22 or a SBS PG 70-22 should be specified.*

PG BINDER GRADE SELECTION FOR FULL-DEPTH HMA PAVEMENTS

Figure 44-4C

44-4.02(e) PG Binder Selection

The PG binder grade may affect the performance of a HMA mixture. The full-depth HMA pavement design procedure assumes that HMA rutting and thermal cracking are adequately considered in the material selection and mixture design process. Selection of the appropriate binder grade can impact the ability of the mix to resist rutting at higher temperatures and thermal cracking at lower temperatures. Both high and low temperature levels need to be considered when selecting the appropriate binder grade for full-depth HMA pavements.

HARD COPIES UNCONTROLLED

44-4.03 Thickness Design

The following processes are used to determine the design thickness:

1. Class I, II and III Roads and Streets. The design procedure is as follows:
   - Calculate the TF from the appropriate equation found in Figure 44-4A.
   - Use Figure 44-6A in conjunction with the subgrade soil grain-size analysis to determine the subgrade support rating.
   - Use Figure 44-4C in conjunction with traffic speed and location to determine the PG binder grade.
   - Use Figure 44-4E to determine the HMA pavement mixture temperature. The design mixture temperature should be interpolated to the nearest 0.5°F.

     Note: The design HMA mixture temperatures for conventional flexible and full-depth HMA pavements are not the same. For the same location, the conventional flexible HMA design mixture temperature is lower than the full-depth HMA design mixture temperature, because conventional flexible design time dates occur earlier in the spring.
   - Use Figure 44-4F (TF < 0.5) or Figure 44-4G (TF ≥ 0.5) to determine the design HMA strain.
   - Use Figure 44-4H to determine the design pavement HMA modulus (E_{HMA}).
   - Use Figures 44-4I, 44-4J, or 44-4K, depending on the subgrade support rating, to determine the design HMA thickness. Round the final design thickness to the next highest 0.25 in.
   - The minimum full-depth HMA design thickness is 6 in.
   - A 12 in. improved subgrade is required for Class I and II pavements and is optional for Class III pavements. Class III pavement subgrades must satisfy the requirements of Section 44-7 during construction.
2. Class IV Roads and Streets. The following procedure applies:
   - If HCV's per day ≤ 48, use a minimum 5 in. HMA pavement. A 12 in. improved subgrade layer is optional. Class IV pavement subgrades must satisfy the requirements of Section 44-7 during construction.
   - If HCV's per day > 48, use a Class III TF equation and design procedure.

44-4.04 Typical Sections

Figures 44-4L and 44-4M illustrate typical LPA full-depth HMA pavement designs.

RESPONSIBILITY OF H.O.A., VILLAGE OF WESTERN SPRINGS AND LAGRANGE HIGHLANDS SANITARY DISTRICT

The Homeowners Association (H.O.A.) shall be responsible for maintenance of all landscaping areas within all Lots and Outlots within the subdivision, together with all improvements within the ingress-egress easement, and all storm sewers and structures. The individual homeowners shall be responsible for all sanitary and water services from the public sanitary service connections and B-Boxes to the constructed buildings. The Village of Western Springs shall be responsible for all watermain and structures attached thereto. The LaGrange Highlands Sanitary District shall maintain the sanitary sewer and all structures attached thereto. The Homeowners Association shall maintain those specified areas and features described above in a manner consistent with the plans approved by the Village of Western Springs (Village) and the standards typical of private property maintenance throughout the community. In the event the Owners fail to properly maintain these areas, the Village shall, upon seventy-two (72) hours prior notice to the H.O.A., have the right, but not the duty, to perform, or have performed on its behalf, any maintenance work to or upon the specified areas and features. In the event of an emergency situation, as determined by the Village, the seventy-two (72) hours prior notice requirement set forth above shall not apply, and the Village shall have the right, but not the duty, to proceed without notice to the H.O.A.

In the event the Village shall perform, or have performed on its behalf, any maintenance work of the specified areas or features, the cost of such work shall, upon recordation of Notice of Lien with the Recorder of Deeds of Cook County, Illinois, constitute a lien against the assets of the property owners and against each and every lot within the subdivision. The cost of the work incurred by the Village shall include all expenses and costs associated with the performance of such work including, but not limited to, reasonable engineering, consulting and attorneys' fees related to the planning and actual performance of the work.

PRIVATE INGRESS - EGRESS PROVISIONS

An easement for ingress and egress over and across the Property for the benefit of the Owner(s) of Subdivision and/or Lots, their heirs, successors, assigns, guests and invitees, as more particularly bounded and described on the Plat. This easement shall be perpetual and shall run with the land.

The Homeowners Association (H.O.A.) shall be responsible for maintenance of all improvements within said ingress and egress areas within the subdivision. The Homeowners Association shall maintain those specified areas and features described above in a manner consistent with the plans approved by the Village of Western Springs (Village) and the standards typical of private property maintenance throughout the community. In the event the Owners fail to properly maintain these areas, the Village shall, upon seventy-two (72) hours prior notice to the H.O.A., have the right, but not the duty, to perform, or have performed on its behalf, any maintenance work to or upon the specified areas and features. In the event of an emergency situation, as determined by the Village, the seventy-two (72) hours prior notice requirement set forth above shall not apply, and the City shall have the right, but not the duty, to proceed without notice to the H.O.A.

In the event the Village shall perform, or have performed on its behalf, any maintenance work of the specified areas or features, the cost of such work shall, upon recordation of Notice of Lien with the Recorder of Deeds of Cook County, Illinois, constitute a lien against the assets of the property owners and against each and every lot within the subdivision. The cost of the work incurred by the Village shall include all expenses and costs associated with the performance of such work including, but not limited to, reasonable engineering, consulting and attorneys' fees related to the planning and actual performance of the work.

STORMWATER MANAGEMENT EASEMENT

Declarant hereby reserves and grants to the Village of Western Springs (Village) easements in, over, under, through, and upon those areas designated on the Plat as 'Stormwater Management Easement,'including but not limited to all outlots (Outlot 30-33 inclusive), and all areas detailed in the Declaration of Covenants Conditions and Restrictions for the Heritage Crossing Townhome Association of Western Springs pertaining to maintenance, repair, and replacement of stormwater management facilities, for purposes of providing adequate stormwater drainage control together with reasonable access thereto. [Continue with the same language currently on the plat in this first paragraph, I don't want to rewrite it all].

In the event the Village shall perform, or have performed on its behalf, removal of any obstruction or alteration to or upon the stormwater facilities drainage easement, as set forth in this easement, The Village shall establish a Special Service Area, pursuant to 35 ILCS 200/27-5 et seq., that includes the entire Premises after the approval of the Planned Development by the Village but prior to the sale and conveyance of title to any Lot to any person by the Developer, which shall govern the Premises for the purpose of ensuring, as and when appropriate, the maintenance, repair and replacement of the SSA Maintained Improvements. The Special Service Area shall be an encumbrance on title to the Premises, including each Lot, Dwelling Unit and Common Areas. The Developer agrees to cooperate with the Village in creating the Special Service Area and agrees not to object to the formation of the Special Service Area, provided the terms of the Special Service Area are consistent with the Development Agreement and this Declaration. In the event the owner of any portion of the Premises (the Developer, the Declarant, the Association, a Dwelling Unit Owner or Owner), at any time, shall fail to maintain, repair or replace the SSA Maintained Improvements, as and when appropriate, and, after receipt of Village notice of such failure and opportunity to cure, the Village shall have the right to levy a special service tax on the parcel(s) where the owner(s) has failed to perform its maintenance, repair or replacement obligations on the Premises, perform such work and receive reimbursement of the costs and expenses it has incurred, including any legal fees and related expenses, engineering fees and related expenses, other consultant fees and related expenses and a reasonable allocation of Village staff and overhead costs. The Village shall not levy a tax in accordance with the Special Service Area unless the applicable owner(s) fails or refuses to fulfill its maintenance, repair and replacement obligations or its reimbursement obligation to the Village, as contained in this Agreement and the Declaration. The tax levy by the Village may extend to one owner or a limited number of owners, and not the entire Premises, if such limited tax levy is appropriate. In the event the failure or refusal to fulfill maintenance, repair and replacement obligations or the reimbursement obligation to the Village relates to one or more components of the SSA Maintained Improvements that support or serve the entire Premises or the Development, then the levy shall extend to the Association and each of the property owners of the Development. The maximum tax established for the Special Service Area shall be based on the actual incurred expenses or, if the improvements have not been made yet, the Village Engineer's reasonable, estimated expense for maintenance, repair or replacement of such Improvements. If the Association or a property owner(s) shall fail to pay the Special Service Area Tax, the Village shall be authorized to: (1) take all other legal action and legal remedies to recoup the Village's funds spent on the enforcement of the obligations and shall be entitled to recover its actual incurred legal fees and related expenses from the owner(s) who fails or refuses to fulfill its maintenance, repair and replacement obligations or its reimbursement obligation to the Village; and (2) take all other legal action and legal remedies to recoup the Village's funds spent on the enforcement of the obligations of the Developer hereunder, including such lien foreclosure action authorized by 65 ILCS 5/11-31-1, as amended, or provided for in 65 ILCS 5-11-31-2, as amended, or similar applicable laws to foreclose on the lien and may collect its reasonable attorney's fees and litigation expenses incurred in the enforcement of the obligations.

COMED COMPANY AND AT & T CORPORATION

An easement for serving the subdivision and other property with electric and communication service is hereby reserved for and granted to COMED COMPANY and AT & T CORPORATION, their respective licensees, successors, and assigns, jointly and severally, to construct, operate, repair, maintain, modify, reconstruct, replace, supplement, relocate and remove, from time to time, poles, guys, anchors, wires, cables, conduits, manholes, transformers, pedestals, equipment cabinets or other facilities used in connection with overhead and underground transmission and distribution of electricity, communications, sounds and signals in, over, under, across, along and upon the surface of the property shown within the dashed or dotted lines (or similar designation) on the plat and marked Public Utility & Drainage Easement, or P.U. & D.E." designation), the property designated in the Declaration of Condominium and/or on this plat as 'Common Elements'; and the property designated on the plat as 'common area or areas'; and the property designated on the plat for streets and alleys, whether public or private, together with the rights to install required service connections over or under the surface of each lot and common area or areas to serve improvements thereon, or on adjacent lots, and common area or areas, the right to cut, trim or remove trees, bushes, roots and saplings and to clear obstructions from the surface and subsurface as may be reasonably required incident to the rights herein given, and the right to enter upon the subdivided property for all such purposes. Obstructions shall not be placed over Grantees' facilities or in, upon or over the property within the dashed or dotted lines (or similar designation) marked 'Easement', 'Utility Easement', 'Public Utility Easement', 'P.U.E' (or similar designation) without the prior written consent of Grantees. After installation of any such facilities, the grade of the subdivided property shall not be altered in a manner so as to interfere with the proper operation and maintenance thereof.

The term 'Common Elements' shall have the meaning set forth for such term in the 'Condominium Property Act', Chapter 765 ILCS 605/2, as amended from time to time.

The term 'common area or areas' is defined as a lot, parcel or area of real property, the beneficial use and enjoyment of which is reserved in whole or as an appurtenance to the separately owned lots, parcels or areas within the planned development, even though such be otherwise designated on the plat by terms such as 'outlots', 'common elements', 'open space', 'open area', 'common ground', 'parking' and 'common area'. The term 'common area or areas', and 'Common Elements' include real property surfaced with interior driveways and walkways, but excludes real property physically occupied by a building, Service Business District or structures such as a pool, retention pond or mechanical equipment. Relocation of facilities will be done by Grantees at cost of the Grantor/Lot Owner, upon written request.

NICOR CORPORATION / NICOR GAS COMPANY PROVISIONS

An easement is hereby reserved for and granted to NICOR GAS COMPANY OF ILLINOIS, its successors and assigns, in all platted 'easement' areas, streets, alleys, other public ways and places shown on this plat, said easement to be for the installation, maintenance, relocation, renewal and removal of gas mains and appurtenances for the purpose of serving all areas shown on this plat as well as other property, whether or not contiguous thereto. No buildings or other structures shall be constructed or erected in any such 'easement' areas, streets, alleys, or other public ways or places nor shall any other use be made thereof which will interfere with the easements reserved and granted hereby.

PUBLIC UTILITY AND DRAINAGE EASEMENT PROVISIONS

A non-exclusive perpetual easement is hereby reserved and granted to the Village of Western Springs (Village), LaGrange Highlands Sanitary District and their successors and assigns over all areas designated "Public Utility and Drainage Easement" and those areas designated "P.U. & D.E." on the plat, to construct, reconstruct, repair, inspect, maintain and operate various transmissions, distribution, and collection systems, including but not limited to water lines, sanitary sewers and storm sewers, together with any and all necessary valve vaults fire hydrants, manholes, catch basins, connections, appliances and other structures and appurtenances as may be deemed necessary by said Village, over, upon, along, under and through the surface of the property shown on the plat, together with the right of access for necessary labor, materials and equipment to do any of the above work.

The right is also granted to cut down, trim or remove, without obligation to restore or replace any obstruction, including but not limited to trees, shrubs, other plants, structures or improvements on the easement that interfere with the operation of such lines and sewers. No permanent buildings or structures shall be placed on said easement, but same may be used for gardens, landscape areas, and other purposes that do not then or later interfere with the aforesaid uses or rights. Where an easement is used for both sewer and other utilities, the other utility installation shall be subject to the ordinance of the Village of Western Springs and to Village approval as to design and location.

Perpetual easements are hereby reserved for and granted to the Village of Western Springs and other governmental authorities having jurisdiction of the land, over the entire easement area for ingress, egress, and the performance of municipal and other governmental services including water, storm and sanitary sewer service and maintenance and emergency and routine police, fire, and other public safety related services.

COMCAST COMMUNICATIONS PROVISIONS

An easement is hereby reserved and granted to COMCAST COMMUNICATIONS CORPORATION, operating within the Village of Western Springs, it's successors and assigns, jointly and severally, for the installation, maintenance, relocation, renewal and removal of communication and broadcast signal systems in, under, across, along and upon the surface of the property shown on the plat and designated as "Public Utility and Drainage Easement" or "P.U. & D.E." and the property designated on the plat for streets and alleys as required to provide the planned unit development and other property, whether or not contiguous thereto, with communication and broadcast TV services, together with the right to install required service connections for each lot. No buildings or other obstructions shall be constructed or erected in any such "Public Utility and Drainage Easement" or "P.U. & D.E." areas, without the prior written consent of grantees. Nor shall any other use be made thereof which will interfere with the easements reserved and granted hereby.

SURVEYOR'S CERTIFICATE

STATE OF ILLINOIS)
) SS
COUNTY OF WILL)

THIS IS TO CERTIFY THAT I, STEVEN J. LAUB, AN ILLINOIS PROFESSIONAL LAND SURVEYOR, NO. 035-003160, HAVE SURVEYED AND SUBDIVIDED THE FOLLOWING DESCRIBED PROPERTY:

PARCEL 1: THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION BEING A SUBDIVISION OF THE EAST 473 FEET OF THE NORTH 775.5 FEET (EXCEPT THE EAST 145.2 FEET OF THE WEST 178.2 FEET OF THE NORTH 350 FEET THEREOF) OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, IN COOK COUNTY, ILLINOIS.

PARCEL 2: LOT 1 IN VIAL'S FAIRWAY, A SUBDIVISION OF PART OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, ACCORDING TO THE PLAT RECORDED APRIL 17, 1957 AS DOCUMENT 16879637 IN COOK COUNTY, ILLINOIS.

PARCEL 3: THAT PART OF THE 66 FEET WIDE LAWN AVENUE, LYING SOUTH OF THE NORTH LINE OF WESTERN SPRINGS TOWNHOMES, RECORDED MARCH 29, 1999, AS DOCUMENT NO. 99297584, LYING NORTH OF THE SOUTH LINE OF RIDGEWOOD UNIT 12, RECORDED OCTOBER 6, 1965, AS DOCUMENT NO. 19810036, LYING WEST OF THE EAST LINE OF THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION, RECORDED NOVEMBER 13, 1948, AS DOCUMENT NO. 14442019, AND LYING EAST OF THE WEST LINE OF RIDGEWOOD UNIT NO. 11, RECORDED APRIL 3, 1964, AS DOCUMENT NO. 19089916, IN THE EAST HALF OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, COOK COUNTY, ILLINOIS.

AS SHOWN BY THE ANNEXED PLAT WHICH IS A CORRECT REPRESENTATION OF SAID SURVEY AND SUBDIVISION.

I FURTHER CERTIFY THAT THIS SUBDIVISION LIES WITHIN THE CORPORATE LIMITS OF THE VILLAGE OF WESTERN SPRINGS, ILLINOIS, WHICH HAS ADOPTED A MUNICIPAL PLAN AND IS EXERCISING SPECIAL POWERS AUTHORIZED BY ARTICLE 11, DIVISION 12 OF THE ILLINOIS MUNICIPAL CODE, AS NOW AND HEREAFTER AMENDED AND THAT ALL REGULATIONS ENACTED BY THE VILLAGE OF WESTERN SPRINGS RELATIVE TO PLATS AND SUBDIVISIONS HAVE BEEN COMPLIED WITH IN THE PREPARATION OF THIS PLAT.

I FURTHER CERTIFY THAT IRON PIPE 1" X 24" WILL BE SET AT ALL LOT CORNERS, BLOCK CORNERS, POINTS OF CURVE, EXCEPT WHERE CONCRETE MONUMENTS ARE INDICATED, AND THAT THE PLAT HEREON DRAWN CORRECTLY REPRESENTS SAID SURVEY AND SUBDIVISION.

I FURTHER CERTIFY THAT THE SUBJECT PROPERTY LIES WITHIN ZONE "X" (AREAS OF MINIMAL FLOODING) AS DEFINED BY THE FEDERAL EMERGENCY MANAGEMENT AGENCY'S (FEMA) FLOOD INSURANCE RATE MAP (FIRM) OF THE VILLAGE OF WESTERN SPRINGS, ILLINOIS, MAP NUMBER 17031C0467J, EFFECTIVE DATE ON AUGUST 19, 2008.

DIMENSIONS ARE GIVEN IN FEET AND DECIMAL PARTS THEREOF AND ARE CORRECTED TO A TEMPERATURE OF 68 DEGREES FAHRENHEIT.

ALL CURVE LENGTHS SHOWN ARE ARC DIMENSIONS.

GIVEN UNDER MY HAND AND SEAL AT MOKENA, ILLINOIS, THIS 10th DAY OF JULY A.D., 2024.

Traffic Impact Study
Proposed Residential Development
Western Springs, Illinois

Prepared For:

McNaughton DEVELOPMENT, LLC
YOUR LUXURY HOME BUILDER

KLOA
Kenig, Lindgren, O'Hara, Aboona, Inc.

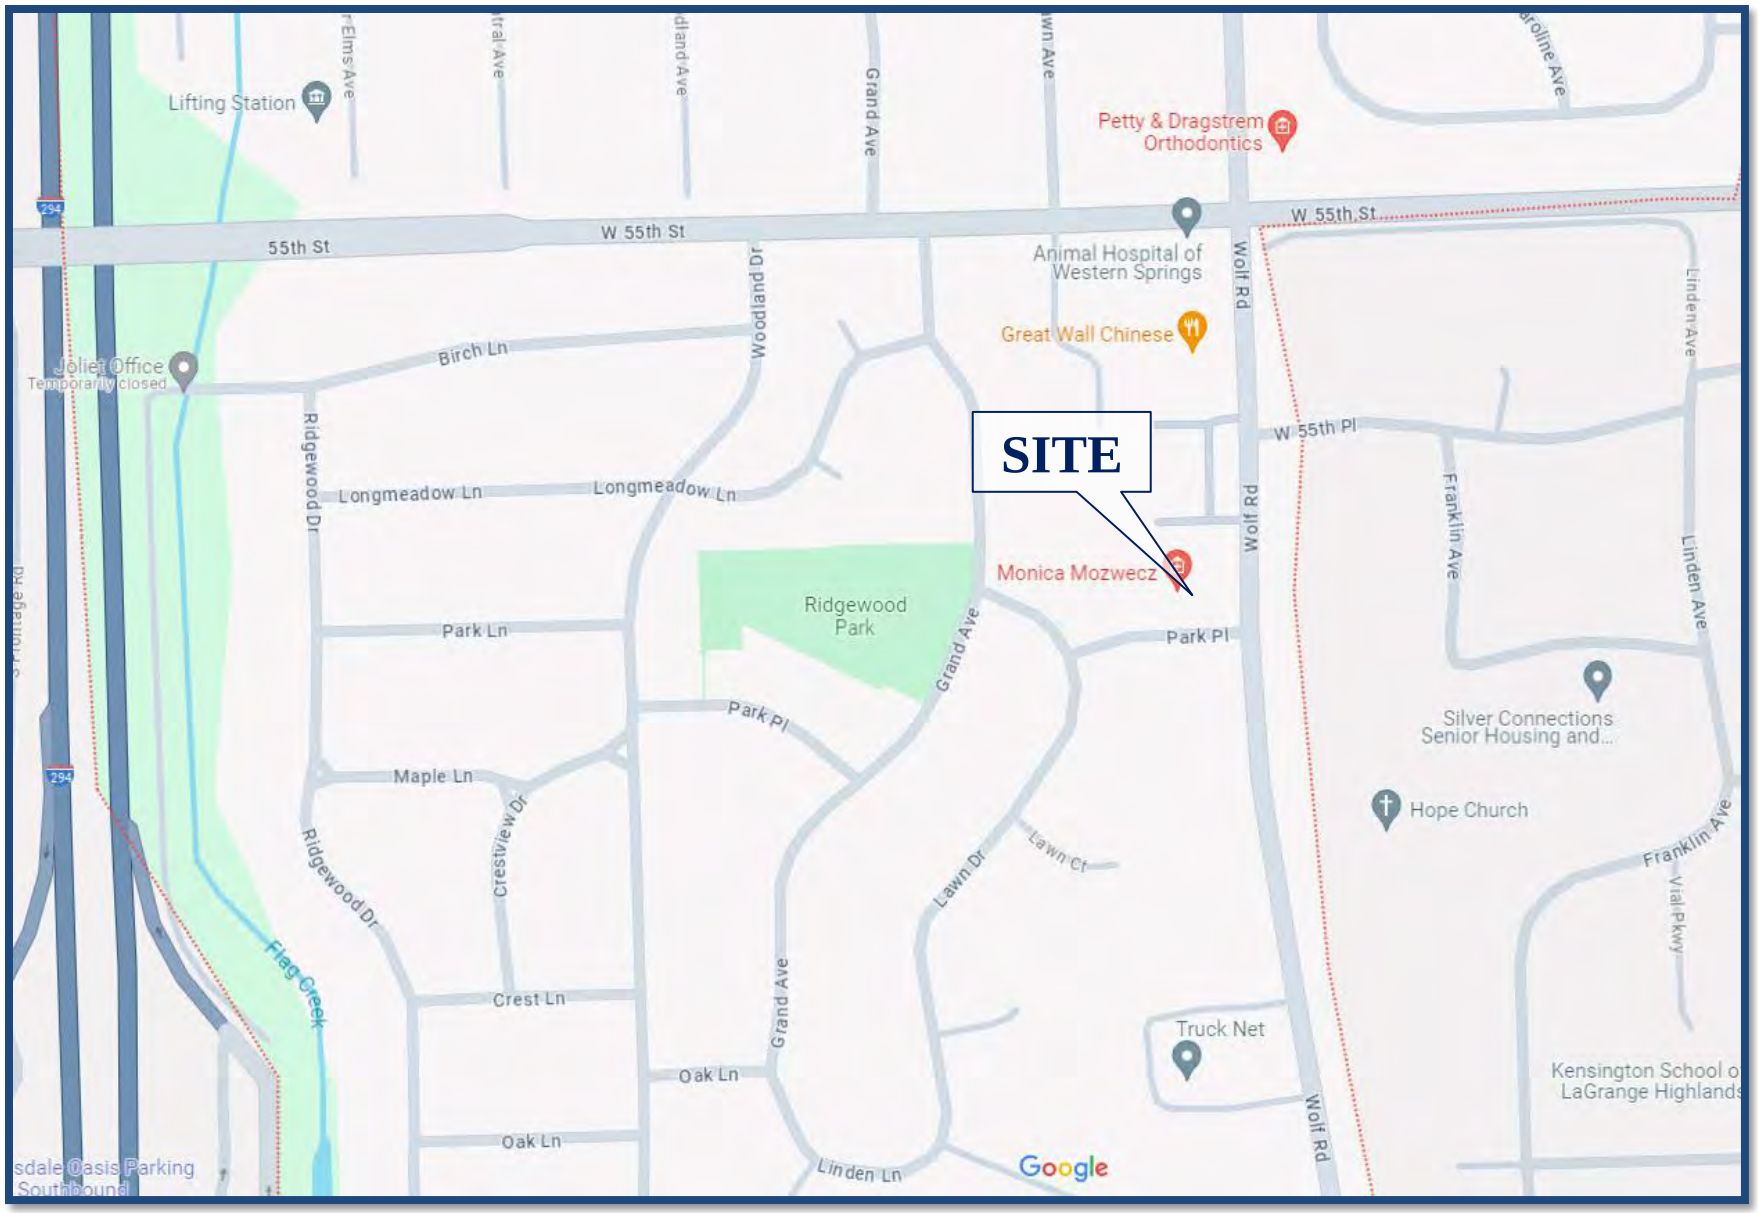
July 9, 2024 – Revised November 25, 2024

1. Introduction

This report summarizes the methodologies, results, and findings of a traffic impact study conducted by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) for a proposed residential development to be located in Western Springs, Illinois. The site, which currently contains a medical office building, is located in the northwest corner of the intersection of Wolf Road (Cook County Highway W22) with Park Place. As proposed, the site will be redeveloped with a residential development consisting of 29 townhome units. Access to the development will be provided via a full-movement access drive off Wolf Road at approximately the same location of the existing access drive serving the medical office building. A gated access will be provided on Heritage Court, only allowing cross-access between the proposed development and the existing Heritage Court townhomes.

The purpose of this study was to examine background traffic conditions, assess the impact that the proposed development will have on traffic conditions in the area, and determine if any additional roadway or access improvements are necessary to accommodate traffic generated by the proposed development. **Figure 1** shows the location of the site in relation to the area roadway system. **Figure 2** shows an aerial view of the site.

The sections of this report present the following:



- Existing roadway conditions
- A description of the proposed development
- Directional distribution of the development traffic
- Vehicle trip generation for the development
- Future traffic conditions including access to the development
- Traffic analyses for the weekday morning and weekday evening peak hours
- Recommendations with respect to adequacy of the site access and adjacent roadway system

Traffic capacity analyses were conducted for the weekday morning and weekday afternoon/evening peak hours for the following conditions:

1. Existing Traffic Conditions – Analyzes the capacity of the existing roadway system using peak hour traffic volumes from traffic counts conducted in 2024.

2. Year 2030 No-Build Conditions – Analyzes the capacity of the existing roadway system using existing traffic volumes increased by an ambient area growth factor not attributable to any particular development.

3. Year 2030 Total Projected Conditions – Analyzes the capacity of the future roadway system using the projected traffic volumes that include the Year 2030 no-build volumes and the traffic estimated to be generated by the proposed development.

Site Location **Figure 1**

Proposed Residential Development
Western Springs, Illinois

KLOA
Kenig,Lindgren,O'Hara,Aboona,Inc.

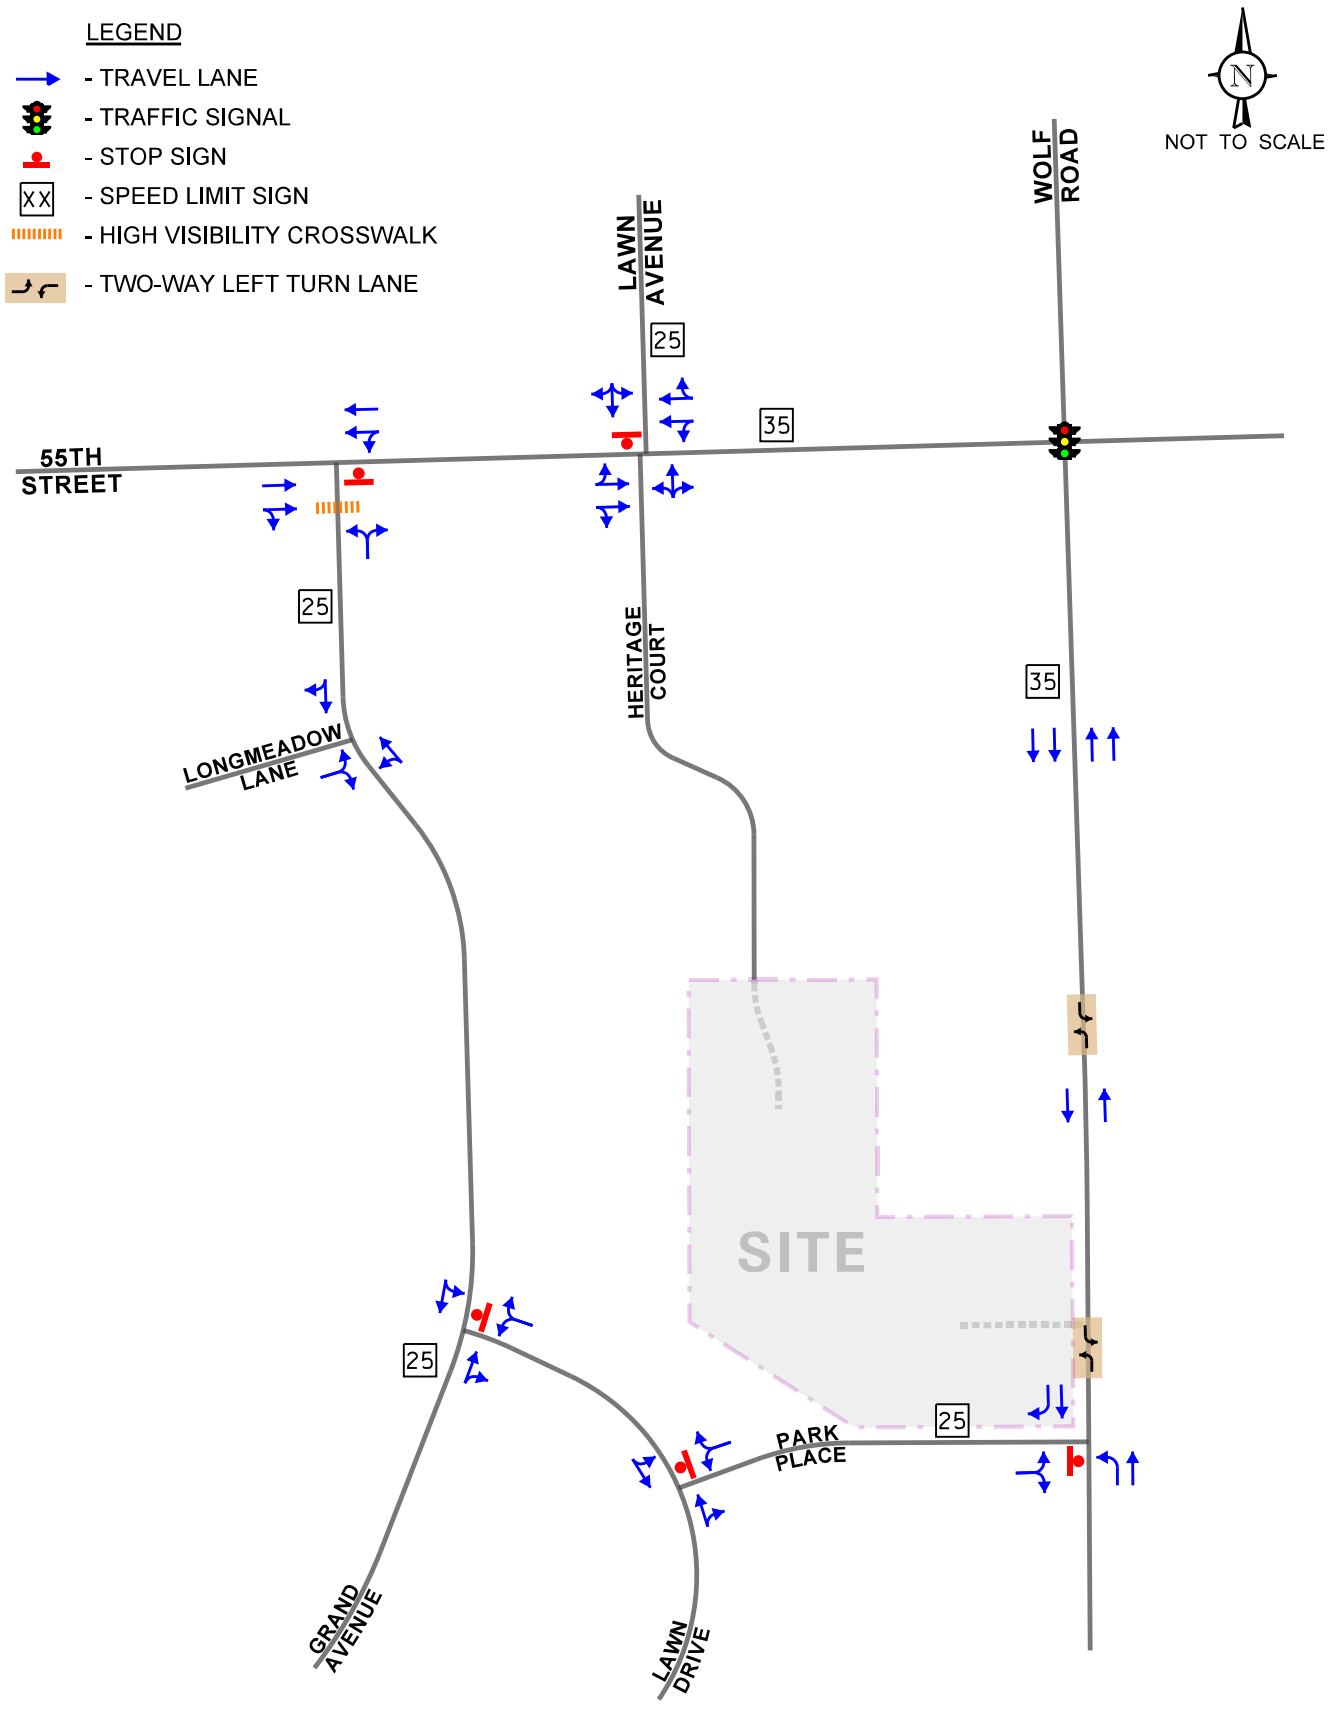
Aerial View of Site **Figure 2**

2. Existing Conditions

Existing transportation conditions in the vicinity of the site were documented based on field visits conducted by KLOA, Inc. in order to obtain a database for projecting future conditions. The following provides a description of the geographical location of the site, physical characteristics of the area roadway system including lane usage and traffic control devices, and existing peak hour traffic volumes.

Site Location

The site, which currently contains a medical office building, is generally bounded by Springwood Manor condominiums and the Western Springs Heritage Townhomes to the north and single-family homes (Ridgewood of Western Springs) to the west and south. Wolf Road borders the site to the east. Land uses in the vicinity of the site are primarily residential in all directions.



Existing Roadway System Characteristics

The characteristics of the existing roadways near the development are described below and illustrated in **Figure 3**.

Wolf Road (Cook County Highway W22) is a north-south minor arterial roadway that provides one lane in each direction divided by a striped median. At its unsignalized intersection with Park Place, Wolf Road provides an exclusive left-turn lane and a through lane on the northbound approach. The southbound approach provides a through lane and an exclusive right-turn lane. Wolf Road is under the jurisdiction of the Cook County Division of Transportation and Highways (CCDOTH), is not designated as a Strategic Regional Arterial (SRA), and has a posted speed limit of 35 miles per hour. According to the Illinois Department of Transportation (IDOT), Wolf Road carries an annual average daily traffic (AADT) volume of 9,150 vehicles (IDOT - 2022).

Park Place is an east-west local roadway that provides one lane in each direction. At its unsignalized intersection with Wolf Road, Park Place is under stop sign control and provides a shared left-turn/right-turn lane on the eastbound approach. At its unsignalized intersection with Lawn Drive, Park Place is under stop sign control and provides a shared left/right-turn lane on the westbound approach. Park Place is under the jurisdiction of the Village of Western Springs and has a posted speed limit of 25 miles per hour.

55th Street is an east-west minor arterial that provides two lanes in each direction divided by a painted median. No exclusive turn lanes are provided on 55th Street at its unsignalized intersection with Heritage Court/Lawn Avenue. However, it is important to note that eastbound and westbound left-turn movements are accommodated by the painted median. No exclusive turn lanes are provided on 55th Street at its unsignalized intersection with Grand Avenue. 55th Street has a posted speed limit of 35mph, carries an AADT volume of 16,600 vehicles (IDOT – 2022), and is under IDOT's jurisdiction.

Heritage Crossings
Western Springs, Illinois

Existing Roadway Characteristics

KLOA
Kenig,Lindgren,O'Hara,Aboona,Inc.

Job No: 24-068 Figure: 3

Heritage Court is a north-south two-lane private road that serves the Western Springs Heritage townhomes and is aligned opposite Lawn Avenue. At its unsignalized intersection with 55th Street, Heritage Court provides a shared left/right-turn lane under stop sign control.

Grand Avenue is a local north-south two-lane roadway serving the Ridgewood of Western Springs subdivision. At its unsignalized intersection with 55th Street, Grand Avenue provides a shared left/right-turn lane under stop sign control. No exclusive turn lanes are provided at its unsignalized intersection with Lawn Drive. Grand Avenue has a posted speed limit of 25 mph and is under the jurisdiction of the Village of Western Springs.

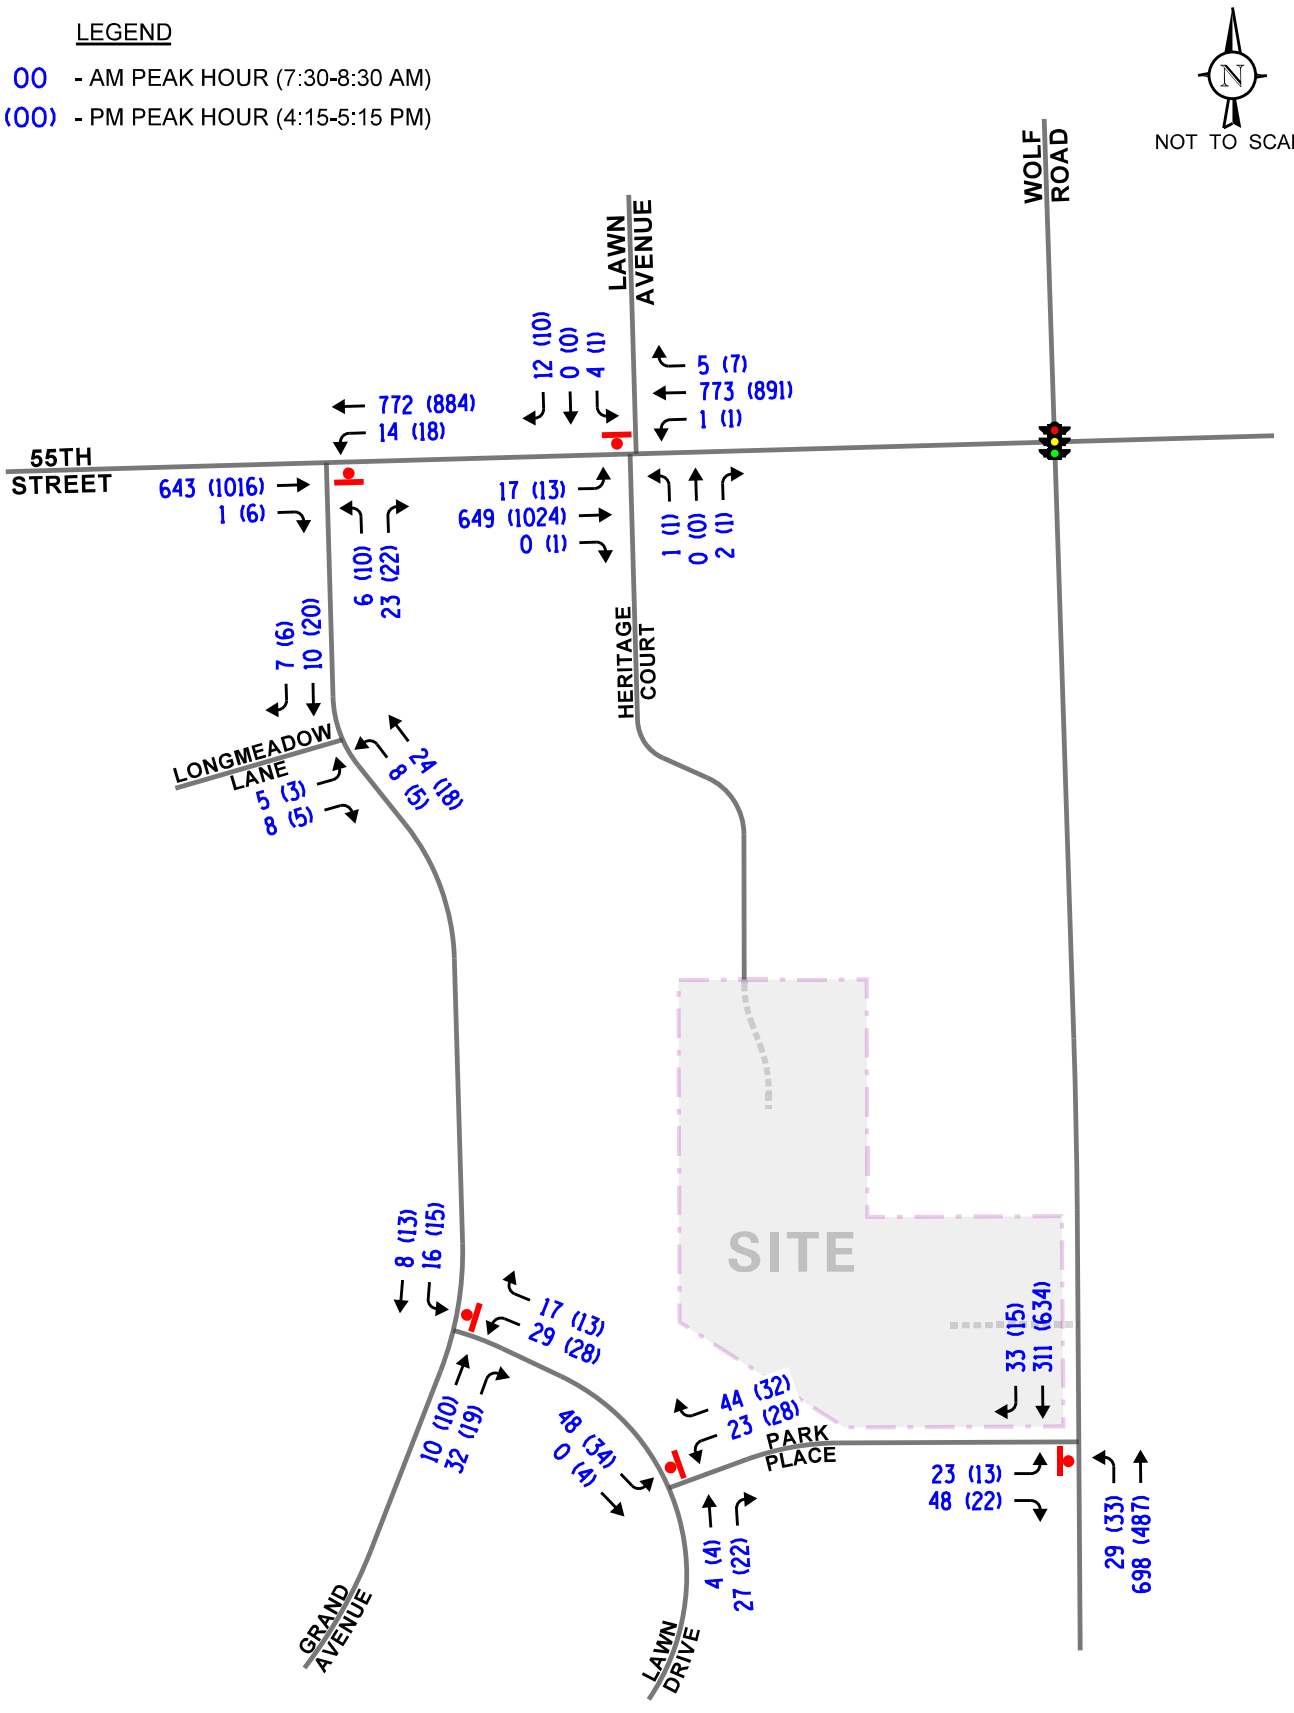
Longmeadow Lane is an east-west two-lane local roadway. No traffic control is provided at its unsignalized intersection with Grand Avenue. Longmeadow Lane is under the jurisdiction of the Village of Western Springs.

Pedestrian Facilities

Based on our field visits, no sidewalks are provided along Park Place or any of the roads within the Ridgewood of Western Springs subdivision. However, a sidewalk is provided along the west side of Wolf Road. A north-south standard style crosswalk is provided on Park Place at its intersection with Wolf Road. Furthermore, a midblock east-west pedestrian high visibility crosswalk is provided on Wolf Road at its intersection with 59th Street. This mid-block pedestrian also provides rapid flashing beacons with proper signage. Additionally, push buttons are provided at each side of the roadway and advance signage is provided to vehicles to be aware of the upcoming crossing.

Existing Traffic Volumes

In order to determine current traffic conditions within the study area, KLOA, Inc. conducted peak period traffic counts utilizing Miovision Scout Collection Units at the following intersections:



- Wolf Road with Park Place
- Park Place with Lawn Drive
- 55th Street with Heritage Court
- 55th Street with Grand Avenue
- Grand Avenue with Longmeadow Lane
- Grand Avenue with Lawn Drive

The traffic counts were conducted on Thursday, March 21, 2024 and on Tuesday, April 2, 2024, during the weekday morning (7:00 A.M. to 9:00 A.M.) and weekday afternoon/evening (4:00 P.M. to 6:00 P.M.) peak periods. The results of the traffic counts show that the peak hours of traffic generally occur between 7:30 A.M. and 8:30 A.M. during the weekday morning peak period and between 4:15 P.M. and 5:15 P.M. during the weekday evening peak period. Copies of the traffic count summary sheets are included in the Appendix. The existing traffic volumes are illustrated in **Figure 4A**. **Figure 4B** shows the existing pedestrian and bicycle traffic volumes.

It is important to note that LaGrange Highlands Elementary School is located approximately 0.4 miles southeast of the intersection of Wolf Road with Park Place. Based on a review of the District 106 student calendar, all schools were in session when the traffic counts were conducted. Furthermore, the LaGrange Highlands Elementary School arrival is between 8:10 A.M. and 8:20 A.M. with class starting at 8:25 A.M. Upon further review of their website, the school's regular dismissal time is at 3:15 P.M. In order to determine the peak traffic and pedestrian volumes during the dismissal time, an additional traffic count was conducted at the intersection of Wolf Road with Park Place during the 3:00 P.M. to 4:00 P.M. hour.

Furthermore, in September 2024, the Village of Western Springs conducted an additional pedestrian count (walking, bicycle, scooter, etc.) for the west leg of the intersection of Wolf Road with Park Place. These volumes, which yielded a higher pedestrian volume than the March 2024 counts conducted by KLOA, Inc. were utilized for the purposes of this evaluation.

Figure 5A shows the existing school peak traffic volumes while **Figure 5B** shows the existing school peak pedestrian and bicycle traffic volumes.

Crash Data Summary

KLOA, Inc. obtained accident data for the most recent available past five years (2018 to 2022) for the study area intersections. A summary of the crash data at the intersections of Wolf Road with Park Place and 55th Street with Grand Avenue is shown in **Tables 1** and **2**. No fatalities were reported at any of the studied intersections during the review period.

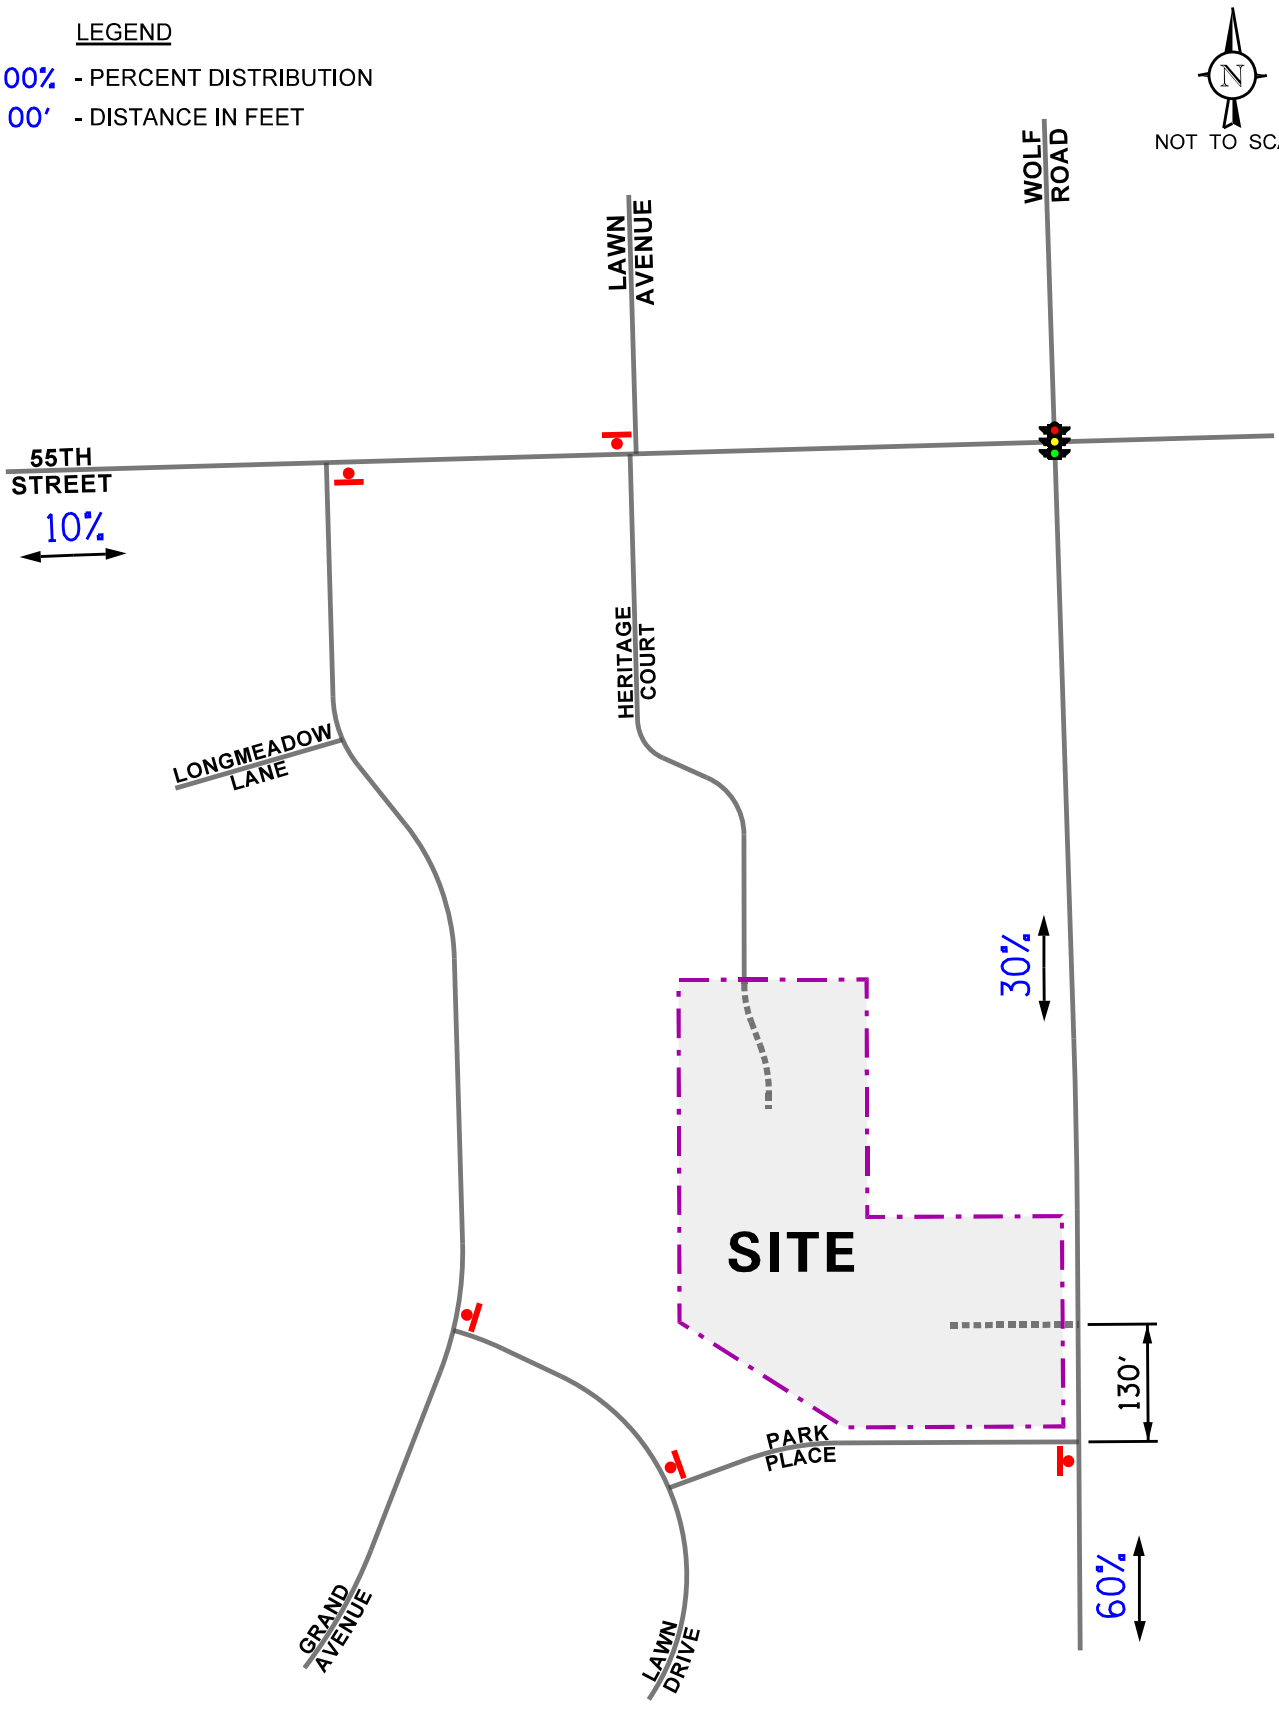
3. Traffic Characteristics of the Proposed Development

In order to properly evaluate future traffic conditions in the surrounding area, it was necessary to determine the traffic characteristics of the proposed development, including the directional distribution and volumes of traffic that it will generate.

Proposed Site and Development Plan



As proposed, the site will be redeveloped with a residential development consisting of 29 townhome units. Access to the development will be provided via a proposed full-movement access drive on Wolf Road to be located at approximately the same location of the existing full access drive serving the medical office building, approximately 130 feet north of Park Place's centerline. The access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. The existing access drive on Wolf Road will be eliminated. A gated access to the north with Heritage Court will also be provided. This access will only provide accessibility to the proposed development and to the existing Heritage townhomes and will be controlled via a clicker that will be provided to residents of both developments. A copy of the preliminary site plan is included in the Appendix.

Directional Distribution

The directions from which residents will approach and depart the site were estimated based on existing travel patterns, as determined from the traffic counts. **Figure 6** illustrates the directional distribution of the development-generated traffic. Figure 6 also shows the distance, in feet, between the existing and proposed access intersections.

Peak Hour Traffic Volumes

The number of peak hour trips (vehicles, bicycles and pedestrians) estimated to be generated by the proposed residential development was based on trip generation rates contained in *Trip Generation Manual*, 11th Edition, published by the Institute of Transportation Engineers (ITE). The "Single-Family Attached Housing" (Land-Use Code 215) rates were used to determine the traffic to be generated by the development. **Table 3** shows the weekday morning, weekday afternoon and weekday evening peak hour traffic, pedestrian, and bicycle trips to be generated by the proposed residential development as well as the daily total traffic volumes. It is important to note that the weekday afternoon peak hour volumes were estimated based on the time-of-day distribution Excel data provided within the *Trip Generation Manual* Appendices. Copies of the trip generation graphs and the hourly distribution Excel sheet are included in the Appendix.

1 – Pedestrian and bicycle trip generation was assumed to be the same as during the evening peak hour

Trip Generation Comparison

As previously mentioned, the site currently contains a medical office building. The existing medical office building is approximately 21,536 square feet in size of which only 1,200 square feet are currently being utilized.

Given that the current zoning allows for both medical office and professional office uses, the volume of traffic that was generated by the full occupancy of the building assuming half of it as medical office and the other half as professional office and that of the proposed development during the weekday morning, afternoon, evening peak hours and on a daily basis was estimated based on the following trip rates published in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 11th Edition:

- Medical-Dental Office Building (Land-Use Code 720)
- General Office Building (Land-Use Code 710)
- Single-Family Attached Housing (Land-Use Code 215)

Table 4 shows a comparison of what the full occupancy of the medical office building was generating and what the proposed rowhomes would generate.

As can be seen, the proposed development will generate substantially less traffic than what the full occupancy of the previous land use was generating. Therefore, the proposed development will have a lower traffic impact than the previous land use.

Table 4
TRIP GENERATION COMPARISON

ITE Land-Use Code	Type/Size	Weekday Morning Peak Hour			Weekday Afternoon Peak Hour			Weekday Evening Peak Hour			Daily Trips

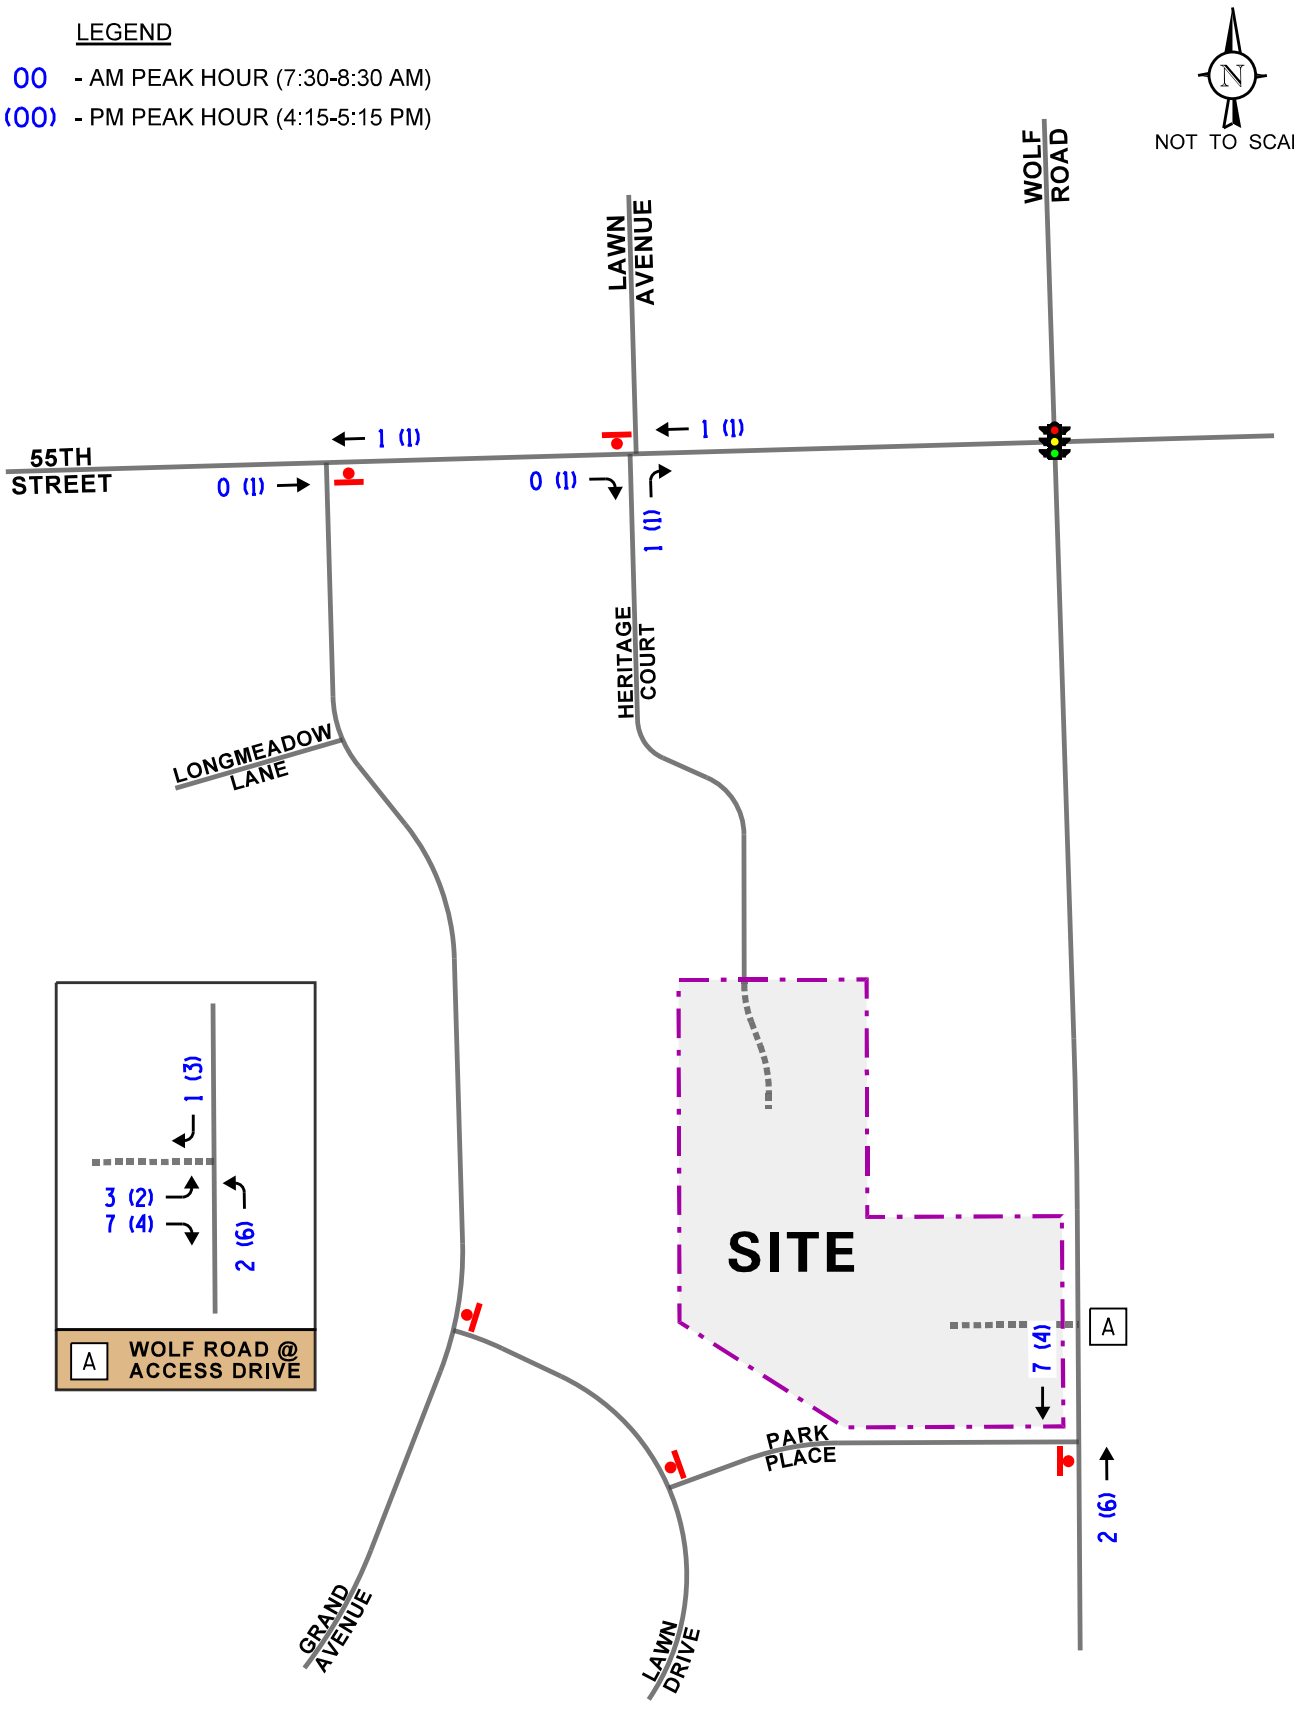
4. Projected Traffic Conditions

The total projected traffic volumes include the existing traffic volumes, increase in background traffic due to growth, and the traffic estimated to be generated by the proposed subject development.

Development Traffic Assignment

The estimated weekday morning and evening peak hour traffic volumes that will be generated by the proposed development were assigned to the roadway system in accordance with the previously described directional distribution (Figure 6). The traffic assignment for the development is illustrated in **Figure 7.** The re-assignment of the Heritage Court townhomes to take into account the proposed connection between the proposed development and the existing townhomes is illustrated in **Figure A** in the Appendix.



Background (No-Build) Traffic Conditions

The existing traffic volumes (Figure 4) were increased by a regional growth factor to account for the increase in existing traffic related to regional growth in the area (i.e., not attributable to any particular planned development). Based on Average Daily Traffic (ADT) projections provided by the Chicago Metropolitan Agency for Planning (CMAP), the existing traffic volumes were increased by an annually compounded growth rate of 0.4 percent per year for six years (buildout year plus five years) for a total of approximately 2.5 percent to project Year 2030 background conditions. **Figure 8** illustrates the Year 2030 no-build conditions. A copy of the CMAP 2050 projections letter is included in the Appendix.

Total Projected Traffic Volumes

The development-generated traffic (Figure 6) was added to the Year 2030 no-build traffic volumes (Figure 7) to determine the Year 2030 total projected traffic volumes, shown in **Figure 9.** The Year 2030 total projected traffic volumes for the weekday afternoon peak hour is illustrated in **Figure B** in the Appendix.

The total projected traffic volumes also include the existing turning movements to and from the medical office building and in order to provide a conservative analysis, these vehicles were not removed from the area roadway system or the traffic volumes at other study area intersections.

5. Traffic Analysis and Recommendations

The following provides an evaluation conducted for the weekday morning and weekday evening peak hours. The analysis includes conducting capacity analyses to determine how well the roadway system and access drives are projected to operate and whether any roadway improvements or modifications are required.

Traffic Analyses

Roadway and adjacent or nearby intersection analyses were performed for the weekday morning and weekday evening peak hours for the existing, Year 2030 no-build, and Year 2030 total projected traffic volumes.

The traffic analyses were performed using the methodologies outlined in the Transportation Research Board's *Highway Capacity Manual (HCM),* 7th Edition and analyzed using Synchro/SimTraffic 12 software.

The analyses for the unsignalized intersections determine the average control delay to vehicles at an intersection. Control delay is the elapsed time from a vehicle joining the queue at a stop sign (includes the time required to decelerate to a stop) until its departure from the stop sign and resumption of free flow speed. The methodology analyzes each intersection approach controlled by a stop sign and considers traffic volumes on all approaches and lane characteristics.

The ability of an intersection to accommodate traffic flow is expressed in terms of level of service, which is assigned a letter from A to F based on the average control delay experienced by vehicles passing through the intersection. The *Highway Capacity Manual* definitions for levels of service and the corresponding control delay for signalized intersections and unsignalized intersections are included in the Appendix of this report.

Summaries of the traffic analysis results showing the level of service and overall intersection delay (measured in seconds) for the existing, Year 2030 no-build, and Year 2030 total projected conditions are presented in **Tables 5** through **7**. A discussion of each intersection follows. Summary sheets for the capacity analyses are included in the Appendix.

Discussion and Recommendations

The following summarizes how the intersections are projected to operate and identifies any roadway and traffic control improvements necessary to accommodate the development-generated traffic.

Wolf Road with Park Place

The results of the capacity analyses indicate that the eastbound approach operates at Level of Service (LOS) C during the weekday morning, afternoon and weekday evening peak hours while the northbound left-turn movement operates at LOS A during all three peak hours. Based on the peak hour turning movement counts, Park Place is estimated to carry 1,250 – 1,300 daily trips. As stated in the publication titled *Residential Streets*, 3rd Edition published by the Urban Land Institute (ULI), the National Association of Home Builders (NAHB), the American Society of Civil Engineers (ASCE) and ITE, the average daily traffic volumes for a residential collector are typically greater than 1,500 vehicles. As such the road is operating below its typical design threshold.

Under Year 2030 no-build and total projected conditions, the eastbound approach and the northbound left-turn movement are projected to operate at the same existing levels of service during all three peak hours with increases in delay of less than two seconds. The 95th percentile queue for the eastbound approach is projected to be approximately one to two vehicles and will not extend back to the location of the proposed access drive. The 95th percentile queue for the northbound left-turn movement is projected to be approximately one vehicle and can be accommodated by the existing left-turn lane. As such, Park Place and its intersection with Wolf Road have sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

55th Street with Grand Avenue

The results of the capacity analyses indicate that the westbound left-turn/through movement operates at LOS A during the weekday morning peak hour and LOS B during the weekday evening peak hour. The northbound approach operates at LOS B during the weekday morning peak hour and LOS D during the weekday evening peak hour.

Under Year 2030 no-build and total projected conditions, all the approaches and their critical movements are projected to operate at the same existing levels of service during both peak hours with increases in delay of less than three seconds. As such, the intersection has sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

55th Street with Heritage Court/Lawn Avenue

The results of the capacity analyses indicate that the northbound and southbound approaches currently operate at LOS B during the weekday morning and weekday evening peak hours. The eastbound and westbound left-turn movements operate at LOS B or better during both peak hours.

Under Year 2030 no-build and total projected conditions, the northbound and southbound approaches will operate at LOS B during the weekday morning and weekday evening peak hours except for the northbound approach that is projected to operate at LOS C during the weekday evening peak hour under projected conditions. The eastbound and westbound left-turn movements are projected to operate at LOS A during the weekday morning peak hour and LOS B during the weekday evening peak hour with increases in delay of less than one second. It should be noted that based on the peak hour turning movement counts at this intersection, Heritage Court is estimated to carry approximately 40 to 50 daily trips and is anticipated to carry the same amount of daily traffic given the proposed connection to the south with the proposed development. As such, the intersection has sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

Grand Avenue with Longmeadow Lane

The results of the capacity analyses indicate that the eastbound approach and the northbound left-turn/through movement currently operates at LOS A during the weekday morning and weekday evening peak hours and will continue to do so under Year 2030 no-build and total projected conditions with minimal increases in delay. As such, the intersection has sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

Grand Avenue with Lawn Drive

The results of the capacity analyses indicate that the westbound approach and the southbound left-turn/through movement currently operates at LOS A during the weekday morning and weekday evening peak hours and will continue to do so under Year 2030 no-build and total projected conditions with minimal increases in delay. As such, the intersection has sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

Lawn Drive with Park Place

The results of the capacity analyses indicate that the westbound approach and the southbound left-turn/through movement currently operates at LOS A during the weekday morning and weekday evening peak hours and will continue to do so under Year 2030 no-build and total projected conditions with minimal increases in delay. As such, the intersection has sufficient reserve capacity to accommodate the traffic to be generated by the development and no roadway improvements or traffic control modifications are required.

Wolf Road with Proposed Access Drive

As proposed, a full-movement access drive will be provided on Wolf Road at approximately the same location as the existing full access drive serving the medical office building, approximately 130 feet north of Park Place's centerline. The access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control. It is important to note that Wolf Road provides a two-way left-turn lane at the location of this access drive. As such, the analysis assumed a short (40-foot) exclusive left-turn lane.

Under Year 2030 total projected conditions, outbound movements from the access drive are projected to operate at LOS B and C during the weekday morning and weekday evening peak hours, respectively. The northbound left-turn movement will operate at LOS A. Furthermore, the 95th percentile queue for the northbound left turn is projected to be one vehicle, which will not interrupt the traffic flow on Wolf Road. As such, the proposed access drive will be sufficient to accommodate the traffic projected to be generated by the proposed development and will ensure efficient and flexible access is provided.

Sight Distance Evaluation

In order to determine if sufficient sight distance is provided along Wolf Road for a vehicle stopped at the access drive, a sight distance study was performed for the intersection of Wolf Road with the existing access drive. While intersection sight distance is desirable, *A Policy on Geometric Design of Highways and Streets* (Green Book) published by the American Association of State Highway and Transportation Officials (AASHTO) indicates that, at a minimum, the location of a side road or access road must meet the minimum stopping sight distance requirements.

As previously indicated, Wolf Road has a posted speed limit of 35 mph. It is important to note that per the Illinois Department of Transportation (IDOT) Bureau of Design and Environment (BDE) Manual design procedures, the intersection sight distance is obtained by providing clear sight triangles. Furthermore and as stated in the Manual, "The length of leg along the minor road is based on two parts. The first is the location of the driver's eye on the minor road. The distance is not wholly based on the location of the stop bar, but instead through research on how far away from through traffic the stopping motorist feels comfortable, even potentially after a two-stop process (stop at stop bar, then pull up and stop at a safe spot closer to the edge of pavement that maximizes sight lines). This distance is typically assumed to be 14.4 feet from the edge of the major road traveled way, but can be increased due to site specific issues".

The minimum stopping sight distance required along Wolf Road for a posted 35 mph speed limit (design speed of 40 mph) based on IDOT's BDE Manual and the *Bureau of Design and Environment (BDE*) Manual and the *A Policy on Geometric Design of Highways and Streets* (Green Book) published by the American Association of State Highway and Transportation Officials (AASHTO) is 305 feet.

As part of the proposed plans, the culvert will be reworked and the existing chain link fence will be moved further back west (For additional details, please refer to Design Tek Engineering, Inc. engineering plans). Based on Exhibit A (see Appendix), the location of the access drive meets the minimum stopping sight distance requirements for the posted speed limit. While the access drive is within the influence of the southbound right-turn lane taper, it is important to note that this is an existing access drive that was approved in the past and has been operating for many years with higher traffic volumes than what the proposed development will generate.

6. Conclusion

Based on the preceding analyses and recommendations, the following conclusions have been made:

- As proposed, the site will be redeveloped with a residential development consisting of 29 townhome units.

- Access to the development will be provided via a full-movement access drive on Wolf Road at approximately the same location as the existing full access drive serving the medical office building, approximately 130 feet north of Park Place's centerline. The access drive will provide one inbound lane and one outbound lane with outbound movements under stop sign control.

- The existing chain-link fence will be relocated further west and adequate sight distance will be provided at the full access drive's intersection with Wolf Road.

- A gated connection to the north with Heritage Court will be provided. This connection will only provide accessibility to the proposed development and the existing Heritage Townhomes and will be controlled via a clicker that will be provided to residents of both developments.

- The area roadway system generally has sufficient reserve capacity to accommodate the traffic to be generated by the proposed development and no additional roadway improvements or traffic control modifications are required.

- The proposed access system will be adequate in accommodating the traffic projected to be generated by the proposed development and will ensure efficient and flexible access will be provided.

- As part of the proposed plans, the existing chain link fence around the culvert will be moved further back west and as such, the location of the access drive will meet the minimum stopping sight distance requirements for the posted speed limit.

cmap.illinois.gov | 312-454-0400

March 6, 2024

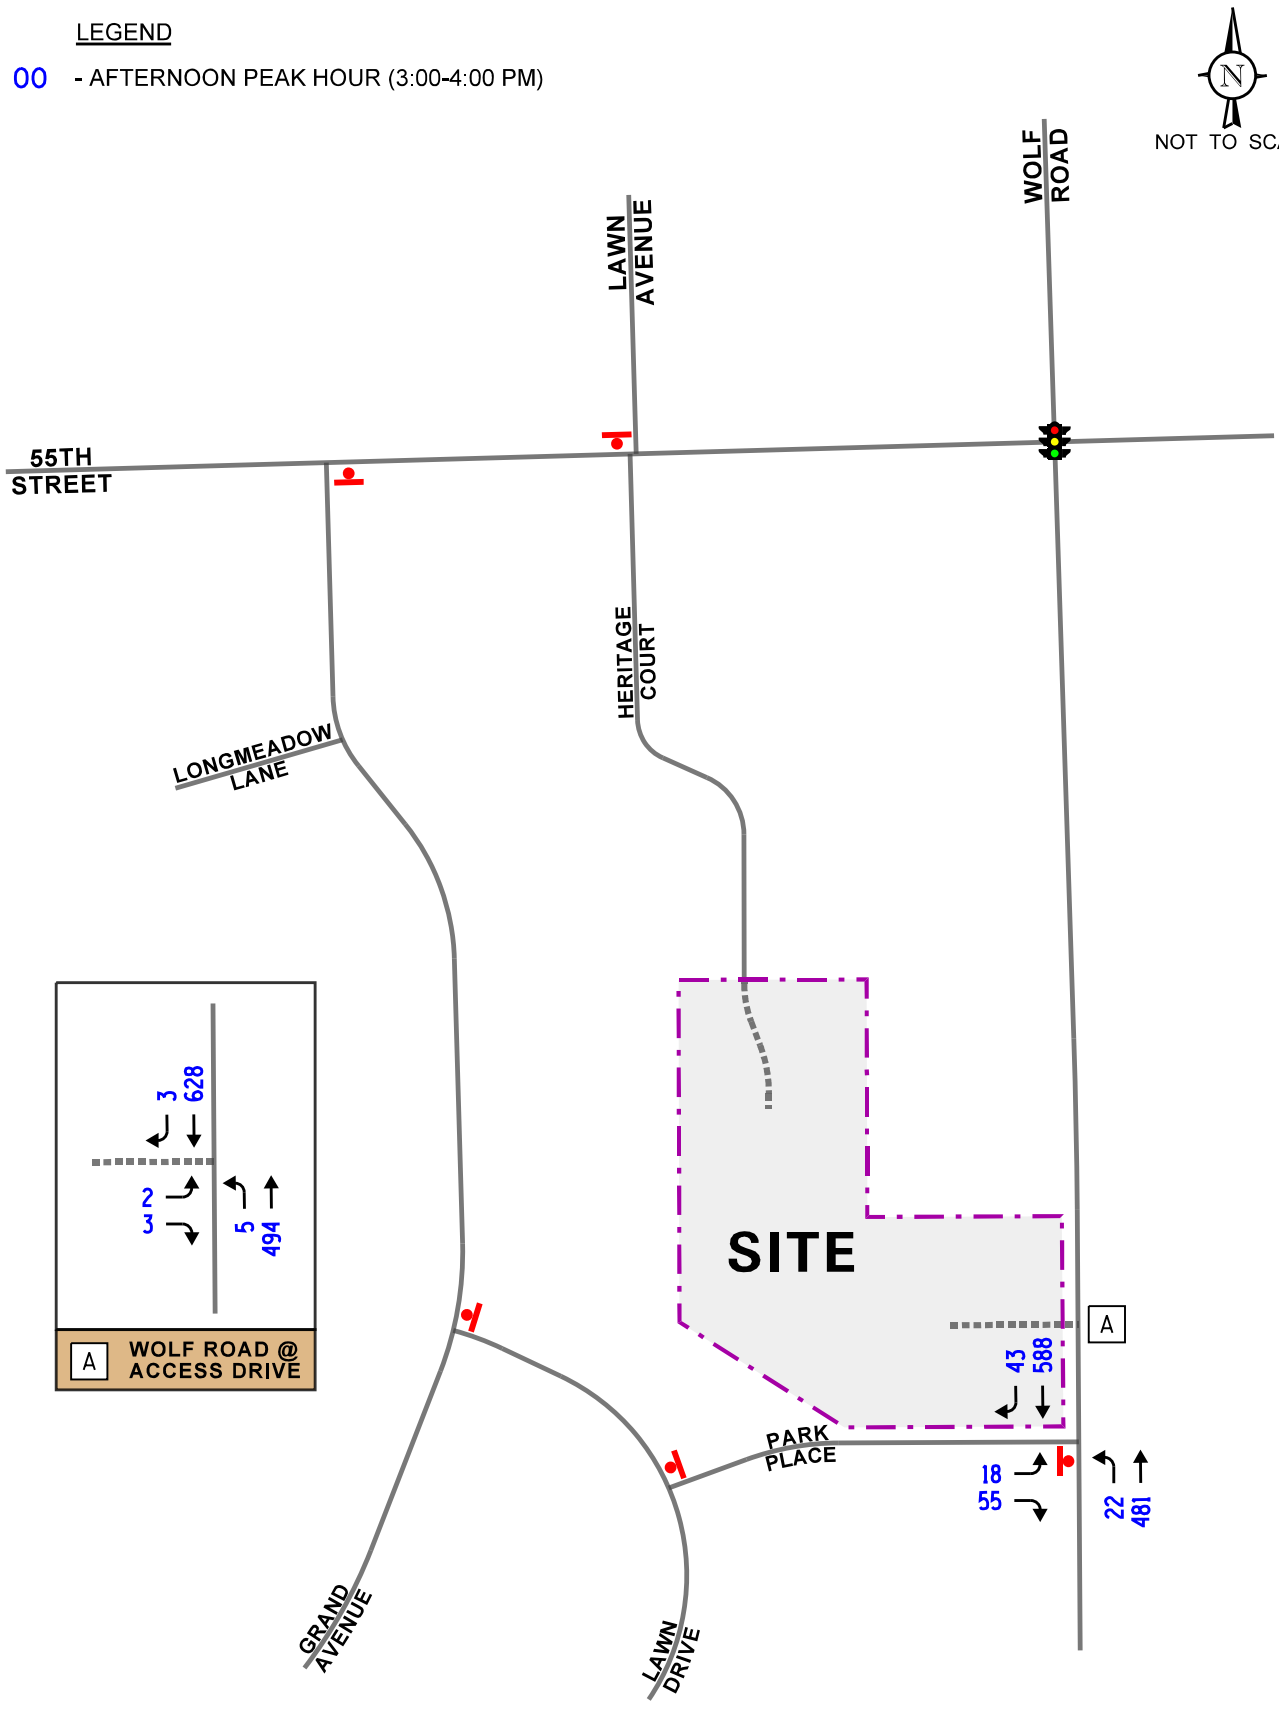
Ryan May
Project Coordinator
Kenig, Lindgren, O'Hara and Aboona, Inc.
9575 West Higgins Road
Suite 400
Rosemont, IL 60018

Subject: 55th Street @ Wolf Road \ Heritage Court \ Grand Avenue
IDOT

Dear Ms. May:

In response to a request made on your behalf and dated March 5, 2024, we have developed year 2050 average daily traffic (ADT) projections for the subject location.

ROAD SEGMENT	Current ADT	Year 2050 ADT
Wolf Rd, at 55th St	9,150	10,200
55th St, at Wolf Rd	16,600	18,500
Heritage Ct, at 55th St	375	410
Grand Ave, at 55th St	2,800	3,100



Traffic projections are developed using existing ADT data provided in the request letter and the results from the December 2023 CMAP Travel Demand Analysis. The regional travel model uses CMAP 2050 socioeconomic projections and assumes the implementation of the ON TO 2050 Comprehensive Regional Plan for the Northeastern Illinois area. The provision of this data in support of your request does not constitute a CMAP endorsement of the proposed development or any subsequent developments.

If you have any questions, please call me at (312) 386-8806 or email me at jrodriguez@cmap.illinois.gov

Level of Service Table

LEVEL OF SERVICE CRITERIA

Signalized Intersections		
Level of Service	**Interpretation**	**Average Control Delay (seconds per vehicle)**
A	Favorable progression. Most vehicles arrive during the green indication and travel through the intersection without stopping.	≤10
B	Good progression, with more vehicles stopping than for Level of Service A.	> 10 - 20
C	Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear. Number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.	> 20 - 35
D	The volume-to-capacity ratio is high and either progression is ineffective or the cycle length is too long. Many vehicles stop and individual cycle failures are noticeable.	> 35 - 55
E	Progression is unfavorable. The volume-to-capacity ratio is high and the cycle length is long. Individual cycle failures are frequent.	> 55 - 80
F	The volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.	> 80

Unsignalized Intersections	
Level of Service	**Average Total Delay (sec/veh)**
A	0 - 10
B	> 10 - 15
C	> 15 - 25
D	> 25 - 35
E	> 35 - 50
F	> 50

Exhibit A – Available Sight Distance

IDOT BDE MANUAL - CHAPTER 31

$SSD = 1.47\ Vt + 1.075\ \frac{V^2}{a}$

where: SSD = Stopping Sight Distance, ft (m)
V = design speed, mph (km/h)
t = brake time, 2.5 seconds
a = driver deceleration, ft/s^2 (m/s^2)

$305 = 1.47\ 40(2.5) + 1.075\ (\frac{1600}{11.2})$

R**EQUIRED FORM OF PERFORMANCE LETTER OF CREDIT IRREVOCABLE LETTER OF CREDIT NO.**
AMOUNT: $
EXPIRATION DATE: Two years after issuance
DATE OF ISSUE: _____202___.

[Name of Bank]
[Address]

TO: Village of Western Springs (Beneficiary)
740 Hillgrove Avenue
Western Springs, Illinois 60558
Attention: Village Manager

_____ BANK HEREBY AUTHORIZES YOU TO DRAW AT SIGHT on the UP TO AN AGGREGATE AMOUNT OF _____ United States Dollars ($_____) for account of [Developer], a _____limited liability company ("Customer").

Drafts under this Letter of Credit shall bear upon their face the words:

Drawn under _____.
Credit No. Dated: _____202___.

Drafts may be for all or any portion of the amount of this Letter of Credit, and shall be generally in the form of the sample draft attached hereto as Exhibit "1," and shall be accompanied by one of the following documents executed by the Western Springs Village Manager:

(a) A written statement on the form attached hereto as Exhibit "2" stating that, conditioned upon proper notice to the Western Springs Village Manager, Letter of Credit No. ___will expire within thirty (30) calendar days or less and that the Customer / [Developer] has failed to deliver to the Western Springs Village Manager evidence of a renewal of Letter of Credit No. ___; or

(b) A written statement on the form attached hereto as Exhibit "3" stating that all or any part of the Infrastructure as defined in and required to be constructed by the Customer / [Developer] pursuant to "An Agreement _____ (the "Development Agreement") have not been constructed in accordance with the Development Agreement and any cure period has expired; or

(c) A written statement on the form attached hereto as Exhibit "4" stating that all or any part of the costs, payments, permit fees, or other fees required to be paid to the Village of Western Springs by the Customer / [Developer] pursuant to the Development Agreement have not been paid in accordance with the Development Agreement and any cure period has expired; or

(e) A written statement on the form attached hereto as Exhibit "5" stating that all or any portion of the maintenance, repair, or restoration required to be performed by the Customer / [Developer] pursuant to the Development Agreement has not been performed in accordance with the Development Agreement and any cure period has expired.

(f) A written statement on the form attached hereto as Exhibit "6" stating that the aggregate amount of the Letter of Credit may be reduced under Subsection __ of the Development Agreement in a certain amount.

_____[BANK] HEREBY AGREES with the beneficiary Village of Western Springs that:

1. Drafts drawn under and in compliance with this Letter of Credit shall be duly honored immediately upon presentation to [BANK] if presented on or before the above-stated Expiration Date or presented at the [BANK] office located at [ADDRESS] together with the original of this Letter of Credit on or before that date. Further, one or more drafts may be presented at [BANK] office on or before the Expiration Date.

2. If, within three (3) banking days after any draft drawn under this Letter of Credit is presented to [BANK] in conformance with the terms of this Letter of Credit, [BANK] fails to honor same, [BANK] agrees to pay all attorneys' fees, litigation and court costs, and other expenses incurred by the Village of Western Springs in enforcing the terms of this Letter of Credit.

3. This Letter of Credit shall expire on _____, 20___, (two (2) years from issuance) as stated hereinabove; provided, however, this Letter of Credit shall only expire after [BANK] sends a written notice to the Western Springs Village Manager by certified mail, return receipt requested, or hand-delivered courier at least thirty (30) calendar days prior to the Expiration Date or such extended Expiration Date, that informs the Village that this Letter of Credit is about to expire (the "30-Day Expiration Notice).

4. In no event will this Letter of Credit or the obligations contained herein expire except after the 30-Day Expiration Notice required herein is delivered to the Western Springs Village Manager, it being expressly agreed that the above Expiration Date shall be extended by the number of calendar days as is required to comply with the 30-Day Expiration Notice delivery requirement.

5. No consent, acknowledgment, or approval of any kind from the Customer / [Developer] shall be necessary or required prior to honoring any draft presented in conformance with the terms of this Letter of Credit.

6. The aggregate amount of this Letter of Credit may be reduced only upon receipt by [BANK] of a document executed by the Western Springs Village Manager as provided in Paragraph (f) above stating that the aggregate amount of this Letter of Credit may be reduced in a specified amount as provided in Subsection ___ of the Development Agreement.

6. This Letter of Credit is irrevocable.

This Letter of Credit shall be governed by and construed in accordance with the Uniform Customs and Practices for ISP 98 of the International Chamber of Commerce (the "Uniform Customs"). In the event of a conflict between this Letter of Credit and the Uniform Customs, this Letter of Credit shall control. This Letter of Credit shall be deemed to be a contract made under the laws of the State of Illinois, including without limitation Article 5 of the Uniform Commercial Code as in effect in the State of Illinois and shall, as to matters not governed by the Uniform Customs, be governed by and construed in accordance with the Laws of the State of Illinois, without regard to principles of conflicts of law.

As used herein, the term “banking day” means any day other than a Saturday, Sunday, or a day on which banks in the State of Illinois are authorized or required to be closed, and a day on which payments can be effected on the Fedwire Network.

REQUIRED FORM OF GUARANTY LETTER OF CREDIT IRREVOCABLE LETTER OF CREDIT NO.

AMOUNT:
EXPIRATION DATE: Two years from issuance
DATE OF ISSUE:
[Name of Bank]
[Address]

TO: Village of Western Springs (Beneficiary)
740 Hillgrove Avenue
Western Springs, Illinois 60558
Attention: Village Manager

[BANK] HEREBY AUTHORIZES YOU TO DRAW AT SIGHT on the _____ UP TO AN AGGREGATE AMOUNT OF _____United States Dollars ($ _____) for account of [Developer], a _____limited liability company ("Customer").

Drafts under this Letter of Credit shall bear upon their face the words: Drawn under Credit No. ____ Dated: _____, 202___.

Drafts may be for all or any portion of the amount of this Letter of Credit and shall be accompanied by one of the following documents executed by the Western Springs Village Manager on the form attached hereto as Exhibit "A" stating that all or any portion of the maintenance, repair, or restoration required to be performed related to Public Infrastructure pursuant to the Development Agreement in accordance with the Development Agreement has not been properly performed.

[BANK] HEREBY AGREES with the beneficiary Village of Western Springs that:

1. Drafts drawn under and in compliance with this Letter of Credit shall be duly honored immediately upon presentation to [BANK] if presented on or before the above-stated expiration date or presented at the [BANK] office located at [ADDRESS] together with the original of this Letter of Credit on or before that date. Further, one or more drafts may be presented at the [BANK] office on or before the Expiration Date.

2. If, within three (3) banking days after any draft drawn under this Letter of Credit is presented to [BANK] in conformance with the terms of this Letter of Credit, [BANK] fails to honor same, [BANK] agrees to pay all attorneys' fees, courts costs, and other expenses incurred by the Village of Western Springs in enforcing the terms hereof.

3. This Letter of Credit shall expire on _____, 20___, (two (2) years from issuance) as stated hereinabove; provided, however, this Letter of Credit shall only expire after [BANK] sends a written notice to the Western Springs Village Manager by certified mail, return receipt requested, or hand-delivered courier at least thirty (30) calendar days prior to the Expiration Date or such extended Expiration Date, that informs the Village that this Letter of Credit is about to expire (the "30-Day Expiration Notice).

4. In no event will this Letter of Credit or the obligations contained herein expire except after the 30-Day Expiration Notice required herein is delivered to the Western Springs Village Manager, it being expressly agreed that the above Expiration Date shall be extended by the number of calendar days as is required to comply with the 30-Day Expiration Notice delivery requirement.

5. No consent, acknowledgment, or approval of any kind from the Customer / [Developer] shall be necessary or required prior to honoring any draft presented in conformance with the terms of this Letter of Credit.

6. The aggregate amount of this Letter of Credit may be reduced only upon receipt by [BANK] of a document executed by the Western Springs Village Manager stating that the aggregate amount may be reduced in a certain amount because the guarantee period for certain maintenance, repair, or restoration amount has expired.

7. This Letter of Credit is irrevocable.

This Letter of Credit shall be governed by and construed in accordance with the Uniform Customs and Practices for ISP 98 of the International Chamber of Commerce (the "Uniform Customs"). In the event of a conflict between this Letter of Credit and the Uniform Customs, this Letter of Credit shall control. This Letter of Credit shall be deemed to be a contract made under the laws of the State of Illinois, including without limitation Article 5 of the Uniform Commercial Code as in effect in the State of Illinois and shall, as to matters not governed by the Uniform Customs, be governed by and construed in accordance with the Laws of the State of Illinois, without regard to principles of conflicts of law.

As used herein, the term "banking day" means (a) any day other than a Saturday, Sunday, or a day on which banks in the State of Illinois are authorized or required to be closed and (b) any day on which payments can be effected on the Fedwire Network.

REDEVELOPMENT AND MAINTENANCE AGREEMENT BY AND BETWEEN THE VILLAGE OF WESTERN SPRINGS, ILLINOIS AND MCNAUGHTON DEVELOPMENT, LLC FOR THE HERITAGE CROSSING RESIDENTIAL TOWNHOME DEVELOPMENT (5600 South Wolf Road, Western Springs, Illinois)

THIS REDEVELOPMENT AND MAINTENANCE AGREEMENT ("**Agreement**") is dated the ___ day of _____, 2025 ("**Effective Date**"), and is entered into by and between the **VILLAGE OF WESTERN SPRINGS** , an Illinois municipal corporation ("**Village**") and **MCNAUGHTON DEVELOPMENT, LLC**, an Illinois limited liability company, with its principal corporate office located at 11S220 Jackson Street, Suite #101, Burr Ridge, Illinois ("**Applicant**" or "**Developer**"), by and through their respective duly authorized agents and/or representatives. The Village and the Developer are at times referred to below individually as a "**Party**" and collectively as the "**Parties**".

IN CONSIDERATION OF the mutual covenants and promises as contained in this Agreement and other good and valuable consideration, the receipt and sufficiency of which are acknowledged, the Parties agree as follows:

SECTION 1. RECITALS.

The Village, a non-home rule municipality, is a duly constituted and existing municipality within the meaning of Section 1 (Municipalities And Units Of Local Government) and Section 7 (Counties and Municipalities Other Than Home Rule Units) of Article VII (Local Government) of the Constitution of the State of Illinois of 1970.

The Village is authorized, under the provisions of Section 10 (Intergovernmental Cooperation) of Article VII (Local Government) of the State of Illinois Constitution of 1970, to contract and otherwise associate with individuals, associations and corporations in any manner not prohibited by law. The Village has the statutory authority to promote the health, safety and welfare of the Village and its residents, to encourage private development in order to enhance the local tax base, and to enter into contractual agreements with developers and redevelopers to achieve these objectives.

As of May 23, 2024, the Developer is the contract purchaser and prospective developer of the real property commonly known as 5600 South Wolf Road, Western Springs, Illinois ("Property") and has filed a General Information Application for Land Use and Development in the Village with supporting documents (the "Application") for the rezoning and redevelopment of the 5600 South Wolf Road Property. Casey and Fran Gaik (the "Property Owner") are the fee simple title owners of the Property and have submitted a written authorization to the Village that allowed the Applicant to file the Application for the redevelopment of the Property as a twenty-nine (29) unit residential townhome development as described in more detail below (the "Development"). The Property Owner has further executed a "Written Consent and Waiver" to allow McNaughton Development, LLC to enter into this Agreement, a copy of which is attached hereto as **Exhibit "I"** and made a part hereof. The Property is approximately 2.755 acres, which consists of 2.414 acres of 5600 Wollf Road and the adjacent Lawn Avenue right-of-way. The Property Tax Index Numbers for the Property are identified as follows: (1) PIN: 18-18-200-017-0000, (2) PIN: 18-18-200-038-0000 , and (3) PIN: 18-18-200-001-0000 (collectively the "**Property PINs**").

D. The Developer proposes to redevelop the Property with twenty-nine (29) unit residential townhomes consisting of nine (9) townhome buildings with varying unit counts of either three-units or four-units. Each dwelling unit will have a balcony, a rear patio, and an attached, front-loaded garage with driveways accessed by a private street through the Development. The Development will have off-street community parking spaces, on street-parking along the west and south sides of the proposed Heritage Court, sidewalks, an expanded stormwater detention basin system and stormwater management facilities and other private and public infrastructure, open space areas, landscaped areas and private streetlights. The Applicant proposes to extend private Heritage Court to the southeast through the Property to the Development's access driveway proposed along Wolf Road. The existing portion of Heritage Court, a private road, currently services only the Heritage Springs Townhome Development, connects to 55th Street to the north of the Property and is maintained by the Heritage Springs Homeowners Association. An automatic gate will separate the Development from the existing Heritage Springs Subdivision to the north. Vehicle access between the adjacent subdivisions will be controlled by a swing gate, and gate access will only be granted to residents of both subdivisions with clicker-access and Village emergency service vehicles. The swing gate will be improved with an Opticom system that will give Village emergency service vehicles access similar to the systems on streetlights. The Developer agrees to accept title to a sixty-six (66.00) foot by two hundred twenty-five (225.00) foot portion of Lawn Avenue (the "Lawn Avenue ROW Parcel") that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development. A copy of the Site Plan for the Development revised as of January 27, 2025 is attached hereto as **Exhibit "A"** and made a part hereof.

E. The Developer agrees to apply for and use commercially reasonable efforts to secure all required zoning and development permit approvals from the Village and all other permits and approvals from other governmental oversight agencies in order to secure final approvals that allow for the construction and operation of the Development in conformance with the Village-approved Final Development Plans, as amended by any Village-approved zoning relief and development entitlements and any approval conditions and requirements imposed by other governmental oversight agencies. The Developer agrees to actively participate in good faith in all required zoning hearing proceedings and development permit processes and all other permits and approvals from other governmental oversight agencies in order to secure final approvals that allow for the construction and operation of the Development.

F. Based on the Application submitted by the Applicant, the Village conducted a public hearing relative to certain zoning relief requested by the Applicant in order to construct the Development. The public hearing was conducted by the Village Plan Commission and commenced on August 13, 2024 and concluded November 18, 2024. The Village Plan Commission issued Recommendation No. PC-2024-02 on November 18, 2024 that favorably recommended approval of the zoning relief contained in the Application, including a Comprehensive Plan Amendment to the Long-Range Land Use Map, a Map Amendment (Rezoning of the Property from the O – Limited Office Zoning District to the R4 - Multiple-Family Residence District), a Conditional Use for a Planned Development, and Exceptions / Variations to the Village Development Control Ordinance ("DCO"), and a Subdivision approval for the construction, operation and maintenance of a Townhome Subdivision Development referred to as "Heritage Crossing", subject to certain stated conditions of approval (the "Development Zoning Relief").

G. On February 10, 2025, the Corporate Authorities of the Village approved Ordinance No. 25-_____ that granted the Development Zoning Relief and a set of Final Development Plans, subject to final Village Engineer comments and Community Development Department comments and subject to final plan review comments at the time of application for a site development permit or a building permit, for purposes of encouraging the Developer to proceed with the necessary land acquisition, project financing, and other zoning, development or governmental permitting entitlement activities relative to securing final approvals to construct the Development (the "Approval Ordinance"). On February 10, 2025, the Corporate Authorities of the Village also approved Ordinance No. 25-_____, which vacated the Lawn Avenue ROW Parcel and approved a plat of right-of-way vacation and retention of stormwater facility easement for purposes of incorporating the Lawn Avenue ROW Parcel into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the Development. The Corporate Authorities of the Village will not unreasonably deny any requested zoning relief or permits that are consistent with the terms of this Agreement after completion of the required public hearing process or the permitting process.

H. To receive a site development permit or a construction permit for the Development, the Developer is required to submit and obtain the approval of the Corporate Authorities of the Village of a set of Final Development Plans, which shall incorporate and account for the Village-approved zoning relief after the required public hearing(s) are completed, including consideration of any recommendation issued by the advisory Village Plan Commission and public input, the Village plan review comments, the Village Engineer review comments and the Community Development Department review comments, and all required amendments issued by any other governmental authority with jurisdiction over the Development and proof of approval of all necessary development or governmental permits issued by any other governmental authority with jurisdiction over the Development.

I. The Developer intends that all roads, driveways, parking spaces, landscaping, stormwater management facilities and other infrastructure and improvements located within the Property will be privately owned and privately maintained in perpetuity, except only Public Infrastructure as defined in Section 2 of this Agreement.

J. The Developer intends to construct the Development continuously to completion once work on the Development commences.

K. The foregoing Recitals of this Section 1 are material terms and provisions and are incorporated herein and made a part of this Agreement.

SECTION 2. DEFINITIONS.

Whenever used in this Agreement, the following terms have the following meanings unless a different meaning is required by the context:

"Approval Ordinance": Western Springs Ordinance No. 25-_____ approving a Conditional Use Permit for Planned Development for the Construction and Operation of the Development with Conditions. See attached **Exhibit "B"**.

"Approved Plans": See Subsection 4.A. of this Agreement.

"Board of Trustees" or "Corporate Authorities": The President and Trustees of the Village of Western Springs.

"Certificate of Completion": means a certificate, issued by the Village, that confirms (a) the Development has been completed in substantial conformance with the Approval Ordinance and the Village-approved Final Development Plans; or (b) substantial completion of any significant milestone component of the Development (e.g., completion of the Infrastructure or the Stormwater Conveyance System or of a townhome building), as applicable.

Change in Law": Means the occurrence, after the Effective Date, of an event described below in this definition, provided such event materially changes the ability of the Party relying thereon to carry out its obligations under this Agreement and such event is not caused by the Party relying thereon. Change in Law means any of the following: (1) the enactment, adoption, promulgation or modification of any federal, State or local law, ordinance, code, rule or regulation (other than by the Village or with respect to those made by the Village, only if they violate the terms of this Agreement); (2) the order or judgment of any federal or State court, administrative agency or other governmental body (other than the Village); or (3) the adoption, promulgation, modification or interpretation in writing of a written guideline or policy statement by a governmental agency (other than the Village, or, with respect to those made by the Village, only if they violate the terms of this Agreement). Change in Law, for purposes of this Agreement, shall also include the imposition of any conditions on, or delays in, the issuance or renewal of any governmental license, approval or permit (or the suspension, termination, interruption, revocation, modification, denial or failure of issuance or renewal thereof) necessary for the undertaking of the actions to be performed under this Agreement (except any imposition of any conditions on, or delays in, any such issuance or renewal by the Village, except as provided herein).

"Development Director": The Village's Community Development Director.

"Developer": Includes McNaughton Development, LLC and its transferees, successors-in-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property, or any other person and each and all homeowners associations or their equivalent within the Property.

"Effective Date": The date that the last signatory signs this Agreement, which shall be written in the first paragraph of this Agreement.

"Force Majeure": See definition of Uncontrollable Circumstance and Subsection 17.N. of this Agreement.

"IDOT": The Illinois Department of Transportation.

"IEPA": The Illinois Environmental Protection Agency.

"Infrastructure": All utilities including without limitation drinking water, sanitary sewer, storm sewer and detention basins, electric, gas, and telecommunication; stormwater system elements including without limitation detention facilities, streets, drive aisles, driveways, drive aprons, curbs, gutters, street lights, and parking spaces; sidewalks, other pedestrian ways, pedestrian amenities, pedestrian lighting, way-finding signs, and trees and other landscaping; and all related improvements for the Development, whether private or public and whether within the Property or within adjacent rights-of-way and property.

"Infrastructure Cost Estimate": See Subsection 4.B. of this Agreement.

"LOC": An irrevocable letter of credit issued by a lending institution licensed to do business in the State of Illinois, on a form approved by the Village Attorney.

"MWRD": The Metropolitan Water Reclamation District of Greater Chicago.

"Private Infrastructure": All Infrastructure other than Public Infrastructure, including the Stormwater Conveyance System.

"Property": The real property legally described and depicted in **Exhibit "C"** attached to this Agreement.

"Public Infrastructure": Infrastructure that is being dedicated to the Village or to other governmental agencies, including without limitation drinking water mains (but not water service lines to buildings), water hydrants, sanitary sewers and other elements determined by the Village. In the event of any ambiguity, the Village will determine whether an Infrastructure element is public or private.

"Director of Engineering Department": The Village's Village Engineer.

"Reimbursable Costs": See Subsection 8. of this Agreement.

"Requirements of Law": All applicable federal and State of Illinois laws and statutes, the Zoning Code, the Village Code, and the Village's building, stormwater management, and other codes and regulations. The Title 9 Building Regulations of the Village Code will apply to architectural and structural plans and specifications for all buildings within the Development unless preempted by State of Illinois or federal law or the Village designates, in writing, other applicable standards. Otherwise, Village-adopted model codes will apply and State of Illinois building codes will apply in the absence of an applicable Village-adopted model code. Accessibility standards of the Americans with Disabilities Act (42 U.S. Code § 12101) will apply to all common areas. The Title 9 Building Regulations of the Village Code reference to 2009 ICC Accessible and Usable Buildings and Facilities (ANSI) (2003 Safe Harbor of FHA) in conjunction with the standards of the Illinois Accessibility Code will be followed for all residential units.

"Site Work": Grading land, excavating soil and debris, environmental remediation, installation of underground utilities, and similar activities.

"Stormwater Conveyance System": All elements of Infrastructure that relate to the management, detention, storage, and conveyance of stormwater, which shall be privately owned and maintained by the Developer and then by the homeowners association.

"Uncontrollable Circumstance": An event that is beyond the reasonable control of and occurs without the fault of the involved party, including without limitation to the following events: (i) an insurrection, riot, civil disturbance, sabotage act of a public enemy, explosion, nuclear incident, war, or naval blockade; (ii) an epidemic, pandemic, hurricane, tornado, landslide, earthquake, lightning, fire windstorm, or other casualty or act of God, or persistent bad weather that impedes progress; (iii) a government condemnation or taking; (iv) a strike, lockout, or other labor dispute other than those caused by the unlawful acts of the Developer; and (v) a Change in Law. Uncontrollable Circumstance does not include any of the following events or conditions: Economic hardship, impracticability of performance, commercial, economic or market conditions, or a failure of performance by a contractor (except as caused by an event that is an Uncontrollable Circumstance as to that contractor). See Subsection 17.N. regarding Force Majeure.

"Village Code": The Western Springs Code of Ordinances.

"Village Manager": The Western Springs Village Manager, or their designee.

"Zoning Code" or "DCO": The Western Springs Development Control Ordinance.

SECTION 3. PROPERTY ACQUISITION; TERMINATION.

Property Acquisition. The Developer has entered into a real estate purchase contract with the Property Owner, and, subject to the terms and conditions of this Agreement, intends to acquire fee simple title to the Property on or before March _____, 2025 (the "**Acquisition Deadline Date**"). The closing date at which the Developer obtains fee simple title to the Property is referred to as the "Acquisition Date". If the Developer does not acquire fee simple title to the Property by 5:00 p.m. CST on the Acquisition Deadline Date, the Developer shall send written notice to the Village within five (5) calendar days after of the expiration of the Acquisition Deadline Date advising that the acquisition of the Property did not occur and providing a status on the acquisition consisting of one of these responses: (i) the Property Owner or the Developer has terminated the real estate purchase contract; or (ii) the Property Owner and the Developer have mutually agreed to terminate the real estate purchase contract; or (iii) the Developer and the Property Owner have extended the Acquisition Date and are actively working on matters to complete the acquisition of the Property by the extended Acquisition Date. If the Property Owner or the Developer terminates the real estate purchase contract or the Property Owner and the Developer have mutually agreed to terminate the real estate purchase contract, this Agreement shall automatically terminate without any further action being taken by either Party, and without any liability to either Party. In the event the Developer does not purchase the Property from the Property Owner, this Agreement shall automatically terminate without further action by the Corporate Authorities of the Village and shall be void and unenforceable, and the Developer agrees to waive all claims, causes of action and damages of any kind that the Developer could file against the Village arising out of or related to the termination of this Agreement based on the Developer not purchasing the Property. If the Developer and the Property Owner extend the Acquisition Date and actively work on matters to complete the acquisition of the Property by the extended Acquisition Date, this Agreement shall remain in effect until either the Property Owner or the Developer terminates the real estate purchase contract or the Property Owner and the Developer mutually agree to terminate the real estate purchase contract, subject to the next sentence. This Agreement shall automatically terminate without any further action being taken by either Party, and without any liability to either Party, if the Developer does not acquire the Property within twelve (12) months of the approval date of the Approval Ordinance, based on the DCO's automatic expiration provision that applies to Village-approved conditional use permits (See, Section 10-3-14K (Condition Uses; Revocation)) of the DCO. Notwithstanding any other provision or term in this Agreement, each Party

expressly agrees that the cure remedy under Section 16 (Default; Cure) of this Agreement shall not apply to the automatic expiration provision that applies to Village-approved conditional use permits. The Corporate Authorities of the Village, in their sole discretion, may pass an ordinance for this Development that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property. The Developer agrees to waive any claims or causes of action for damages of any kind that it could file against the Village for not passing an ordinance that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property. The Developer also agrees to indemnify, defend and hold harmless the Village and its appointed and elected officials, employees, engineers, attorneys, agents and representatives from any claims or causes of action or damages of any kind that could be filed against the Village by the Property Owner or any person for not passing an ordinance that extends the 12-month automatic expiration provision that applies to Village-approved conditional use permits so that the Developer has additional time to acquire the Property.

B. **Lawn Avenue Right-of-Way Vacation.** The Developer agrees to accept title to the Lawn Avenue ROW Parcel that will be vacated by the passage of a vacation ordinance and a plat of right-of-way vacation and retention of stormwater facility easement by the Village for purposes of incorporation into the Property and the Development so that the Developer can construct an expanded stormwater detention basin system as part of the construction of the Development. The Village shall provide the Developer a title commitment free and clear of any tax liens or other financial encumbrances, subject to all conditions imposed by the Village under this Agreement and the Lawn Avenue right-of-way vacation Ordinance 25-_____.

SECTION 4. DEVELOPMENT PLANS.

A. **Development Plans.** Prior to the issuance by the Village of any permit for construction within the Property, the Developer must provide to the Village the following detailed Final Development Plans for the Development, all of which must be substantially consistent with **Exhibit "D"** to the Approval Ordinance and shall be reviewed by the Community Development Director, the Director of Fire and Emergency Medical Services and the Director of Law Enforcement Services, the Village Engineer, the Village Attorney, and other Village consultants (collectively, the "Village Staff") as part of the Village development plan review process, and shall be returned to the Developer for updating and corrections to comply with the Village Staff's development plan review comments and requirements (the "Approved Plans"). The final version of the Approved Plans shall be stamped by a licensed engineer or signed by a licensed architect. The Developer may re-submit updated Final Development Plans to address the Village Staff's plan review comments and requirements. If the Developer objects to any of the Village Staff's development plan review comments and requirements, the Developer may file a written request with the Village Board seeking approval of a modification(s) to the Village Staff's development plan review comments and requirements, which may or may not be granted by the Village Board, in its sole discretion, at an open public meeting. The Approved Plans, at a minimum, shall consist of final versions of:

(i) Detailed engineering plans, including without limitation civil, structural, architectural, lighting, construction staging, mechanicals screening, on-site and off-site storm water drainage plans, and Infrastructure plans.

(ii) Detailed, dimensioned site plans.

(iii) Detailed, dimensioned landscaping plans.

(iv) Building Elevations and Village-approved Exterior Building Materials List (color, material type, etc.).

(v) Signage plan for buildings, traffic, parking and other informational signs within the Development.

(vi) Stack wall for the townhouses. Prior to issuance by the Village of any permit for construction other than Site Work, the Developer must assemble a representative "stack" wall on the Property with the Village-approved masonry, wood, and other construction materials to be used on the townhouse buildings. The stack wall must precisely show the materials and techniques to be used for the walls of the townhouses. The stack wall will be reviewed by the Community Development Director and will be approved by the Community Development Director only if it conforms to the Approved Plans.

(vii) Such other plans and documents reasonably required by the Village Staff for the construction of the Development by the Developer.

B. **Infrastructure Cost Estimate.** The Developer must prepare an itemized estimate of the cost of construction of each component of the Infrastructure (the "Infrastructure Cost Estimate") and submit the estimate to the Village prior to the issuance by the Village of any permit for construction. The Village Engineer will review, revise as necessary, and approve the Infrastructure Cost Estimate.

SECTION 5. DEVELOPMENT AND USE OF THE PROPERTY.

Commencement and Completion of Construction.

(i) The Developer intends to commence site improvement or construction work on the Development not more than one hundred eighty (180) calendar days after the Village Board's approval of the Approval Ordinance (the "**Anticipated Commencement Date**"), subject only to Force Majeure.

(ii) The date the Developer receives a Village site development permit or a building permit authorizing work to proceed on the Development, or any part thereof, shall be the "**Commencement Date**".

(iii) Construction of the Development shall substantially comply with the provisions of the Approval Ordinance and each of the conditions of approval set forth in the Approval Ordinance.

(iv) Construction of the Development shall substantially comply with, and the Development shall be substantially completed in accordance with, the timeframes outlined on Developer's "Construction Schedule", attached hereto as **Exhibit "E"** and incorporated herein (the "Construction Schedule"), but not later than twenty-four (24) months after the Commencement Date, subject to Force Majeure, with the actual date of Substantial Completion being the "**Substantial Completion Date**". "Substantial Completion" or "Substantially Completed" shall mean that the residential component of the Development is eligible to receive a certificate of occupancy, and the public improvements are completed to the Village's dedication standard, to the extent applicable to such public improvements.

(v) Developer may start construction on its model home units numbers 1 to 4 and 27 to 29 prior to the completion of the extension of Heritage Court through the Property; however, the Developer shall install a gravel stone road within the proposed width of the Heritage Court extension from the west edge of Wolf Road to the frontage of the model units (approximately except for the 108 feet). The gravel stone road shall be continuously maintained free from of potholes and wheel ruts by the Developer, at its cost, to ensure that the gravel road can be used for emergency vehicle access. All underground utilities to the model units must be installed at the same time the binder course is installed.

B. **Substantial Compliance with Approved Plans.** Except for minor alterations due to field conditions approved by the Village Engineer or Development Director, the construction of the Development shall substantially conform with: (i) the Approval Ordinance, (ii) this Agreement, (iii) the Approved Plans, and (iv) the Requirements of Law; and shall not materially impact the exterior materials and/or exterior architectural designs included in the Approved Plans, were not rejected by the Village during the design phase of the Development, and are necessary for the Developer to complete the Development, or any portion thereof, within the applicable portion of the Development Construction Schedule. Any type of approved plan changes must comply with Section 10-8 of the Village Code.

C. **Plat of Subdivision; Easements for Cross Access.** Prior to the issuance of any permit for construction, the Developer must prepare and file the final Plat of Heritage Crossing Subdivision, in a form satisfactory to the Village, granting cross access easements by the general public and the property owners of the Heritage Springs Subdivision and the Heritage Crossing Subdivision onto and across the pedestrian ways, roads (Heritage Court), and other paths within the Property.

D. **Development – Prior to Property Acquisition or Issuance of Permits.** No construction, improvement or development of any kind by the Developer shall be permitted on any portion of the Property unless and until: (a) the Developer acquires title to the Property; and (b) the Developer has been issued either a Village site development permit, demolition permit, or a Village building permit. Further, no occupancy of the Development may occur prior to the issuance of a Village Certificate of Completion for the Infrastructure and a Village certificate of occupancy for the portion of the Development that occupancy is sought (i.e., individual certificates of occupancy shall be issued for individual townhome units only after the Village issues a Certificate of Completion for the individual townhome building) Model units will only be granted a certificate of completion for daytime (7:30 am to 8:00 pm) use for marketing purposes.

E. **Development – Failure to Complete.** In the event that the Developer fails to complete the Development on or prior to the Substantial Completion Date, or fails to comply with the Construction Schedule (in either case, subject to Force Majeure), and such failure continues for more than thirty (30) calendar days after notice thereof by the Village to the Developer, then:

(i) The Village, by delivery of written notice to the Developer, may require the Developer to submit, within fifteen (15) calendar days, a plan pursuant to which the Developer will: (i) avoid falling further behind the dates set forth in the Construction Schedule; and (ii) complete construction of the Development in accordance with the Construction Schedule, as modified to reflect the "catch-up" plan (a "**Catch-Up Plan**"), for approval by the Village Manager, which approval shall not be withheld unreasonably provided that the Catch-Up Plan has been approved by the Developer's construction lender (the "**Lender**"). At such time as the Village has approved a Catch-Up Plan, the Developer shall

use commercially reasonable efforts to implement, and diligently pursue and complete, the activities of the Catch-Up Plan.

(ii) If the Developer fails to timely: (i) submit a Catch-Up Plan to the Village that has been approved by the Lender, or (ii) implement or complete the Catch-Up Plan; which failure continues for more than thirty (30) calendar days, then the Developer shall be deemed to be in default under the Catch-Up Plan and the Village shall have the right, but not the obligation, to hire a replacement contractor to complete the unfinished Public Infrastructure and Stormwater Conveyance System ("Default Work") and shall have the right to use the Developer Security (as defined below) to pay the contractor to complete such Default Work. Upon such a default by the Developer, subject to and in accordance with the terms and conditions of any construction financing agreement, the Lender will have the right, but not the obligation, to exercise and perform the Developer's rights and obligations under this Agreement, including the hiring of a replacement contractor to complete the Default Work and/or to complete the Development. If the Village elects to complete the Default Work, then the Developer shall be obligated to pay, or to reimburse the Village for, all costs and expenses of completing such work that are in excess of the proceeds of the construction financing agreement and the Developer's Security.

(iii) The Developer shall be responsible for all costs and expenses to prepare and implement and complete the Catch-Up Plan.

(iv) The rights and remedies set forth in this Subsection 5.E. shall be the sole remedies available to the Village for the failures specified in this Subsection; provided that the Village shall have: (i) the remedy of specific performance to enforce the obligations of Developer pursuant to the terms and conditions of this Subsection; and (ii) the right to recover from the Developer all costs and expenses, including reasonable attorney fees, incurred by the Village in connection with exercising its rights and remedies under this Subsection, together with interest at the rate of eight percent (8%) per annum on any Village funds expended prior to reimbursement from the Developer Security.

F. **Dedication and Maintenance of Land.** The Developer shall comply with the dedication of land and maintenance of landscaping obligations as set forth in the Conditions of the Approval Ordinance. The Developer shall use commercially reasonable efforts to convey, transfer or dedicate any portion of Property to Cook County or any other necessary governmental agency that is required to provide for the street access (ingress and egress) point onto Wolf Road for the Development.

G. **Development Covenants, Conditions, and Restrictions.** Prior to the issuance by the Village of any building permit other than a permit for Site Work, the Developer must present to the Village for review and comment and approval a set of Covenants, Conditions, and Restrictions ("CC&Rs") for the Development. The CC&Rs may not be amended without the prior express written consent of the Village at any time or in any manner that alters or interferes with any easement, grant, right, or remedy granted or reserved to the Village, including without limitation the right of the Village: (i) to cure any violation of the CC&Rs, this Agreement, the Approval Ordinance, or any other Requirements of Law, (ii) to perform necessary maintenance and repairs, (iii) to be reimbursed for all of the Village's costs and expenses related to maintenance and repairs, and (iv) to have a lien against the Property for unpaid costs and expenses. After Village approval, the CC&Rs shall be filed with the Cook County Clerk's Office, Recording Division ("CCCORD") by the Developer, at its cost.

H. **Maintenance of and Damage to Public Property and Off-Site Improvements.** During construction of the Development, the Developer must: (i) maintain all streets, sidewalks, and other public property adjacent to the Property in a good and clean condition and free of hazards at all times, (ii) promptly clean all mud, dirt, or debris deposited on any street, sidewalk, or other public property in or adjacent to the Property by the Developer or any agent of or contractor hired by, or on behalf of, the Developer, and (iii) repair or replace all damage to any private or public utilities or other private or public improvements of any kind that are located on-site or off-site relative to the Property that may be caused by the activities of, or on behalf of, the Developer or any employees, contractors, subcontractors or agents hired by, or on behalf of, the Developer. The Developer agrees to promptly repair or replace or restore such damaged improvements with like-kind and like-quality materials. If, within twenty-four (24) hours after the Village gives the Developer notice to clean mud, dirt, or debris or to repair damage in compliance with this Subsection, the Developer neglects or fails to clean or repair or to undertake with due diligence to clean or repair the affected public property, then the Village may clean or repair the affected property, either with its own forces or with contracted forces, and recover from the Developer the greater of $750.00 or the sum equal to the total cost incurred by the Village including without limitation administrative costs. The

I. **Environmental Conditions.** The Developer must remain in compliance with all applicable federal and State of Illinois environmental laws and regulations while constructing the Development.

J. **Building Certification.** RESERVED.

K. **Estimated Site Development Costs and Construction Budget.** Based on the Approved Plans, the "Estimated Site Development Costs" to develop, construct and complete the Development's public and private infrastructure is $1,285,620.35. The Developer shall deliver to the Village an itemized letter from a licensed engineer, certifying to the Village that, to such engineer's knowledge following reasonable investigation and inquiry, the Estimated Development Costs will not be less than $1,285,620.35.

L. **Development Financing.** At the time the application for a site development permit is submitted, the Developer shall provide the Village Manager with a confidential letter issued by the Developer that lists the tiered funding sources to be used to complete the Development and includes marked-confidential copies of supporting financing documents consisting of secured, fully executed construction financing term sheets, loan obligations and written proof of Developer equity contributions and investor equity contributions acceptable to the Village and sufficient to demonstrate that adequate funds are available to Substantially Complete the Development, including a financing commitment letter or a construction loan commitment letter issued by a bank or other financial lender for the Development. The Developer's financing commitments shall be sufficient to cover the equity and debt financing, including the Developer Security, to Substantially Complete the Development. In the event the Developer is unable to provide the Village with written evidence of the Development financing sufficient to Substantially Complete the Development within the time frame set forth in this Agreement, the Village may, exercising its sole discretion, terminate this Agreement and all of the Parties' rights, duties and obligations under this Agreement shall terminate without any liability being imposed on the Village or the Developer. The confidential letter and supporting financial submittals shall be retained on file with the Village Clerk's Office and shall not be attached to this Agreement but is referenced as **Group Exhibit "F"** to this Agreement.

SECTION 6. CONSTRUCTION AND MAINTENANCE OF INFRASTRUCTURE.

A. Developer's Duty to Construct Infrastructure. The Developer, at its cost, must construct and install all of the Infrastructure.

B. Standards Applicable to Infrastructure. The following standards apply to the construction of the Infrastructure.

(i) General Standards. All Infrastructure must be constructed in compliance with the standards in this Agreement and all Requirements of Law. All work performed in the construction of the Infrastructure must be conducted in a good and workmanlike manner. All materials used for construction of the Infrastructure must be new and of first-rate quality.

(ii) Special Standards. Construction of the Infrastructure must conform to the applicable standards of the La Grange Highlands Sanitary District, MWRD, IDOT, Cook County and the IEPA.

(iii) Prosecution of the Work. Once Site Work has begun, the Developer and all of its contractors must use commercially reasonable efforts to prosecute work on the Infrastructure in a diligent manner until the work is properly completed.

(iv) Inspection, Engineering, Testing Services. In general conformance with the Village Development Control Ordinance 10-10-17C, the Developer must provide, at its cost, all inspection, engineering, and testing for construction of the Infrastructure, including without limitation: (a) on-site construction supervision services, (b) periodic inspections of construction of the Public Infrastructure conducted by a professional engineer, and (c) third-party materials sampling and testing services. The Developer must promptly provide the Village with the names of the project manager and project engineer and telephone numbers at which the project manager and project engineer can be reached at all times.

(v) Village Inspections and Approvals. Village representatives have the right and authority, and the permission of the Developer, to inspect all work on the Infrastructure at all times between 8:00 a.m. and 6:00 p.m. weekdays, and at any other time work is taking place within the Property, and in the case of an emergency at any time reasonably determined by the Village, to confirm compliance with all requirements of this Agreement and all Requirements of Law.

(vi) Other Approvals. When the construction of Infrastructure requires the permission or approval of a regulatory agency, including without limitation the La Grange Highlands Sanitary District, MWRD, IDOT, Cook County or the IEPA, then the Developer must use all commercially reasonable efforts required to obtain the required permission or approval. The Developer may not commence work requiring the permission or approval of any such agency in advance of receiving that permission or approval.

C. Approvals of Infrastructure. At the time the site development permit is issued, a list of required inspections will be provided to the Developer. The Developer will be responsible for completing all required inspections. In the event that a required inspection is not completed, the Village reserves the right to request that the Developer re-expose the Infrastructure at the Developer's cost for inspection. When an Infrastructure improvement has been completed, the Developer must request final inspection and approval of that Infrastructure improvement by the Village. The Village will inspect that Infrastructure improvement and may prepare a punch list of items requiring repair or correction. The Developer must promptly make all necessary repairs and corrections as specified on the punch list. The Village will not approve an Infrastructure

improvement until it has been fully and properly completed in accordance with the Approved Plans, including without limitation all punch list work for that Infrastructure improvement.

D. Acceptance, Dedication and Acceptance of Public Infrastructure. The Developer will dedicate to the Village or to any other governmental agency with oversight jurisdiction each Public Infrastructure improvement after it is approved by the Village or the other governmental agency with oversight jurisdiction. The Village will accept a Public Infrastructure improvement when it has been fully and properly completed, but nothing will constitute an acceptance by the Village of a Public Infrastructure improvement except express written acceptance by the Village. Prior to the Village's acceptance, the Developer must execute, or cause to be executed, all documents reasonably requested by the Village to transfer ownership of the Public Infrastructure improvement to the Village, free and clear of all liens, claims, and encumbrances or restrictions that would prevent the Village from operating, maintaining, repairing, or replacing that Public Infrastructure improvement. The documents transferring ownership of a Public Infrastructure improvement to the Village (e.g., bill of sale and affidavit of title, etc.) must be reasonably acceptable in form and substance to the Village Attorney. Within thirty (30) calendar days of the acceptance, dedication or conveyance, the Developer shall provide the Village Manager with final, executed copies of the acceptance, dedication or conveyance documents that relate to each component of the Public Infrastructure improvements after it is approved by the other governmental agencies with oversight jurisdiction.

E. Infrastructure Guarantees. The Developer guarantees the prompt and satisfactory correction of every defect or deficiency in any Infrastructure that occurs or becomes evident within two (2) years after Village approval and acceptance of that Infrastructure, and in the case of stormwater management system elements three (3) years, pursuant to this Agreement. If any defect or deficiency occurs or becomes evident during the 2-year or 3-year period, then the Village will give notice to the Developer stating the defect or deficiency and the Developer must correct the defect or deficiency within ten (10) calendar days after receipt of the notice or, if the defect or deficiency cannot reasonably be corrected within that 10-day period, then within a longer period of time as is reasonably necessary to correct the defect or deficiency so long as the Developer has promptly commenced and uses commercially reasonable efforts to diligently pursue the correction. If the defect or deficiency is not corrected within the required time period, then the Village may undertake the correction and then the Village will have the right to draw from the performance securities deposited pursuant to Section 9 of this Agreement to reimburse itself for all costs and expenses incurred in making the correction. If any Public Infrastructure is repaired or replaced by the Developer pursuant to the demand of the Village, then the guaranty provided by this Subsection 6.E. will be extended, as to the repair or replacement, for two (2) full years after the date of completion of the repair or replacement.

F. Perpetual Maintenance of Private Infrastructure. The Developer, and then the homeowners association, must maintain, at its cost and expense, all Private Infrastructure at all times in good and serviceable condition consistent with Village codes and generally accepted engineering practices, including without limitation Village codes and ordinances and MWRD standards, as applicable. If at any time the Developer, or the homeowners association, is in breach of this standard, as determined by the Village, then the Village may issue a citation to, and impose a fine on, the Developer, or the homeowners association, as provided in the Village Code. In addition, the Village may issue notice stating that the Developer, or the homeowners association, must cure the breach within thirty (30) calendar days or, if the breach cannot reasonably be cured

within thirty (30) calendar days, then within a date certain set by the Village. The Developer, or the homeowners association, must promptly commence the cure and use commercially reasonable efforts to diligently and continuously pursue the cure to completion. If the cure is not completed within the required time, then the Village may, but is not in any way obligated to, undertake the cure using its own forces or outside forces. The Developer, or the homeowners association, will be liable for, and must reimburse to the Village, all costs and expenses incurred by the Village to cure the breach. If the Village's costs and expenses have not been reimbursed in full within thirty (30) calendar days after notice from the Village, then all unpaid costs and expenses will become a lien against the Property in its entirety and the Village will have the right to collect the unpaid costs and expenses and to enforce the lien in the same manner as mortgage foreclosure proceedings. Under no circumstances will the Village ever be required or obligated to maintain or repair any Private Infrastructure. The terms of this Subsection 6.F. shall be incorporated in the CC&Rs. Maintenance obligations for the Stormwater Conveyance System shall consist of:

(i) **Operations and Maintenance Manual for Stormwater Conveyance System:** The Developer shall comply with the maintenance and operations obligations for the Stormwater Conveyance System set forth in and required by the Operations and Maintenance Manual, per the Approval Ordinance and Section 10-11-11 (Stormwater Management Requirements For All Developments) of the DCO. A copy of the Operations and Maintenance Manual is attached hereto as **Exhibit "G**" and made a part hereof.

(ii) **Maintenance Obligations Imposed on the Developer and Then the Homeowners Association:** The maintenance of the Stormwater Conveyance System for the Development shall be the responsibility of the Developer and then the homeowners association. The Developer guarantees that it and all future owners of the Property shall maintain the Stormwater Conveyance System.

(iii) **Inspection Access by Village Representatives:** The Developer specifically authorizes representatives of the Village to enter onto the Property for the purpose of conducting inspections and testing of the Stormwater Conveyance System.

(iv) **Maintenance Schedule:** The Developer shall comply with the "Schedule for Regular Maintenance" of each aspect of the Stormwater Conveyance System and shall provide for access to the Stormwater Conveyance System for inspection and testing by authorized representatives of the Village. In the even that any authorized representatives of the Village notify the Developer, or the homeowners association, in writing of any maintenance problems which require correction, the Developer, or the homeowners association, shall make such corrections within thirty (30) calendar days of such notification. The Village shall be reimbursed by the Developer and then by the homeowners association for the actual costs and fees incurred relative to any inspection and/or testing conducted by its representatives. If the corrections are not made within this time period, the Village may have the necessary work completed and assess the cost to the Developer or the or the homeowners association.

(v) **Annual Maintenance Inspections:** All components of the Stormwater Conveyance System shall be inspected by representatives of the Developer and then the homeowners association not less often than once per year. A written report shall be prepared of the results of any inspection and a copy of the report shall sent to the Village Manager detailing any problems which need

correction within thirty (30) calendar days of the date of the report or by no later than September 30 each year.

G. Abandonment of Construction. If the Developer abandons the Development or any part of the Development, then the Developer, within ninety (90) calendar days after notice from the Village, must: (i) remove all partially constructed improvements from the Property, (ii) backfill all excavations, and (iii) spread topsoil and plant grass seed throughout the Property, all to the satisfaction of the Village (collectively the "Required Restoration"). For purposes of this Subsection 6.G, "abandons" means cessation of construction for a continuous period of ninety (90) calendar days for any reason other than Force Majeure. If the Developer fails or refuses to complete the Required Restoration within the 90-day period, or such longer period of time as is reasonably necessary to complete the Required Restoration so long as the Developer has promptly commenced and uses commercially reasonable efforts to diligently pursue the Required Restoration, then the Village will have, and is granted in addition to all other rights afforded to the Village in this Agreement and by law, the right, at the Village's option, to hire a contractor to complete part or all of the Required Restoration. Thereafter, the Village may charge the Developer an amount equal to the Village's actual costs of the Required Restoration including without limitation contractor costs, disposal costs, administrative personnel fees and costs, and legal fees (collectively the "Charged Amount"). If the Charged Amount is not paid by the Developer within thirty (30) calendar days after notice from the Village, then the Charged Amount, and all costs incurred by the Village related to collection of the Charged Amount (the "Collection Costs"), may be deducted from the Developer Security and will become a lien against the Property, and the Village will have the right to collect the Charged Amount and the Collection Costs and to enforce the lien in the same manner as mortgage foreclosure proceedings.

H. Progress Meetings. At all times, the Developer and the Village shall each have an individual designated as the Developer's and the Village's primary point of contact for Development-related matters. The Developer shall meet on a monthly basis with the Development Director and Village Engineer, or their designee, and other Village staff as appropriate, to provide a comprehensive progress report on the Development. Appropriate Development team personnel shall attend the meeting on behalf of the Developer and the Village, and shall provide and exchange information regarding the status of construction and occupancy, pending permit requests and other appropriate information.

I. Village Construction Manager Consultant. The Village reserves the right to hire a construction manager consultant to assist the Village and its staff with all aspects of the Development, including but not limited to compliance with the terms of this Agreement, the plan review process, inspections, reporting and oversight of the construction of the Development. The compensation and other employment benefits payable to the construction manager consultant for their work relative to the Development qualifies as a charge under the Reimbursable Costs.

"As-Built" Development Plans. The Developer, at its cost, shall prepare and provide to the Development Director one (1) electronic copy of the "As-Built" Final Development Plans, with all minor modifications and in-field adjustments shown, at the time of issuance of the last occupancy permit for the final townhome unit as part of the Village's issuance of the Certificate of Completion for the Development. The "As-Built" Plans are subject to the review and approval by the Village Engineer and the Community Development Director, or their designees.

SECTION 7. CONSTRUCTION STAGING, TRAFFIC, PARKING; STREETS.

A. **Construction Staging.** The staging of construction work and materials must be in conformance with the Village-approved construction staging plan. The Developer must submit a staging plan for Village review and approval prior to the issuance of the permit for construction of the Development. The Developer shall not allow for the staging any construction equipment, materials or vehicles within the right-of-way of Park Place. The Developer shall not allow the staging of any construction equipment, materials or vehicles on the Property in a manner that creates sight-line issues for vehicle traffic traveling on Wolf Road or Park Place or Heritage Court, as determined by the Village Manager. The Developer or its any contractor, subcontractor or material supplier who violates the Village-approved construction staging plan or this subsection shall each be subject to a $750.00 per day fine for each separate violation that occurs.

B. **Designated Traffic Routes.** The Village, in consultation with the Developer, may designate routes of access to the Property for construction traffic to protect pedestrians and to minimize disruption of traffic and damage to particular streets.

C. **Parking.** All construction-related vehicles, including passenger vehicles and construction equipment, must be parked within the Property or in areas specifically designated in advance in writing by the Village. The Developer shall not allow construction-related vehicles, including passenger vehicles of employees of the Developer, contractors, subcontractors or material suppliers, to be parked on Park Place or Wolf Road during the construction of the Development. The Developer or its any contractors, subcontractors or material suppliers who violates this subsection shall each be subject to a $750.00 per day fine for each separate violation that occurs.

D. **Streets, Sidewalks, and Other Rights-Of-Way.** Any work on streets, sidewalks, and other rights-of-way related to the Development, public or private, must meet the following standards:

(i) Compliance with Plans. All work must comply with the Village-approved plans for that work.

(ii) Protection of Final Surface Course; Restoration. Except with the prior express written consent of the Village, no construction traffic may use any improved public right-of-way after installation of the final surface course of that right-of-way. If the Developer uses an improved public right-of-way for construction traffic, then the Developer must keep that right-of-way free and clear of mud, dirt, debris, obstructions and hazards, and must, after the use is no longer necessary, restore and repair that right-of-way to Village standards.

SECTION 8. DEVELOPER PAYABLE COSTS, FEES, AND EXPENSES AND ESCROW.

A. **Negotiation, Review, Inspection Fees.** In addition to all other costs, payments, fees, or other charges required by this Agreement or by the Requirements of Law or by the Village Code, the Developer must pay to the Village, promptly after receipt of a written demand or demands for payment:

(i) All reimbursable costs, fees, payments, charges, and expenses (collectively "Reimbursable Costs") for outside engineering, outside legal, outside building, and other outside consulting or administrative services incurred or accrued in connection with the review and processing of plans for the development of the Property and in connection with the negotiation, preparation, consideration, and review of this Agreement, at the standard rates charged to the Village, as required

by the Village Code. All Reimbursable Costs for which demand has been made, but payment has not been received, by the Village prior to execution of this Agreement must be made by a certified or cashier's check contemporaneous with the execution of this Agreement by the Village.

(ii) All Reimbursable Costs for inspections of the Property and the Development conducted by outside inspectors.

(iii) All Reimbursable Costs for inspections of an individual dwelling unit until issuance of a final certificate of occupancy for that unit.

(iv) All Reimbursable Costs incurred in connection with a future application, document or proposal, whether formal or informal, of whatever kind submitted by the Developer (or its successor) to the Village in connection with the Development or the use or future development of the Property.

(v) All Reimbursable Costs incurred by the Village for publications and recordings required in connection with the Development or the Property.

B. **Other Village Fees.** In addition to all other Reimbursable Costs required by this Agreement, the Developer must pay to the Village (as applicable): (i) all standard application, plan review, inspection, and permit fees, (ii) all standard water and sewer fees, tap-on fees, and charges, (iii) compensation for trees removed from public parkways or other public right-of-way, (iv) all costs for replacement trees, and (v) all other standard fees, charges, impact fees to the Village and to any other governmental agency with an impact fee ordinance and contributions pursuant to the Requirements of Law and the Village Code.

C. **Reimbursement for Village Work on Utilities.** If during construction of the Development the Developer discovers a water main, sewer main, or other utility that must be relocated to avoid conflict with the Development, then the Developer and the Village will determine how, where, and by whom the utility will be relocated and the Developer must pay all costs and expenses of that relocation.

D. **Developer Escrow.** The Developer shall maintain a "Developer Cash Escrow" with the Village for purposes of payment of the Reimbursable Costs and other costs payable to the Village by the Developer as required by this Agreement, and shall comply with the funding terms of the Developer Escrow as set forth in the Approval Ordinance and Section 9. below.

E. **Compensation for Development Impacts.** RESERVED.

SECTION 9. PERFORMANCE SECURITY.

A. **Developer Cash Escrow; Letter of Credit ("LOC").** As security to the Village for the performance by the Developer of the Developer's obligations to construct and complete the Infrastructure pursuant to and in accordance with this Agreement, the Developer shall deposit with the Village the following:

(i) Developer Cash Escrow. The sum of $58,000.00 cash (the "Developer Cash Escrow") shall be paid by the Developer to be held by the Village and drawn on to reimburse the Village for Reimbursable Costs incurred by the Developer described in Section 8. above. Any interest earned on the Developer Cash Escrow will be added to the escrow, but the Village is not required to cause interest to be earned. If draws on the Developer Cash Escrow reduce the balance in the Escrow to $10,000.00 or below at any time, then the Developer

must restore the Developer Cash Escrow to a level determined by the Village (but not exceeding $30,000.00) until the Certificate of Completion is issued by the Village for the Development. Any money remaining in the Developer Cash Escrow will be distributed to the Developer within sixty (60) calendar days after notice from the Developer to the Village requesting release of such funds, after issuance of the full, final certificate of occupancy for the final townhome building constructed within the Development.

(ii) Performance and Payment Letter of Credit. A performance and payment letter of credit in an amount equal to one hundred ten percent (110%) of the Infrastructure Cost Estimate (the "Performance LOC") in the form required in Subsection 9.E. below.

(iii) Condition Precedent. The deposit of the Performance LOC and the Developer Cash Escrow is a condition precedent to issuance of any permit by the Village for work on the Development.

B. **Maintenance of Performance LOC.** The Performance LOC shall be maintained and renewed by the Developer, and will be held in escrow by the Village, until completion of the Infrastructure and the Public Infrastructure, as determined by the Village, and the approval by the Village Manager and dedication to the Village of the Public Infrastructure, if any, and until the posting of the Guaranty Bonds required by Subsection 9.C. below. After the acceptance and posting of the Guaranty Bonds, the Village will release the Performance LOC and return it to the Developer.

C. **Guaranty Bonds.** As a condition of the Village's approval of the Public Infrastructure and the Village's acceptance, where appropriate, of any or all of the Infrastructure pursuant to Subsections D. and E. of this Section, the Developer must post two (2) Guaranty Bonds, in the form required by Subsection 9.E. below (each a "Guaranty Bond") as follows:

(i) General Guaranty Bond: This Guaranty Bond shall be security for the performance of the Developer's obligations under this Agreement related to Infrastructure. The General Guaranty Bond will be in the amount of ten percent (10%) of the Infrastructure Cost Estimate and will be held by the Village in escrow until the end of the two-year guaranty period set forth in Subsection 6.E. of this Agreement . or until two (2) years after any necessary modification to or correction of any defect or deficiency in a Public Infrastructure improvement pursuant to Section 6.E. above and payment therefor, whichever occurs later. At the end of the two-year guaranty period, the Village will inspect the Infrastructure to verify whether any modification or corrective repair work needs to be performed, and, if such work is needed, the General Guaranty Bond, shall be retained for two-year period by the Village in accordance with this Subsection.

(ii)

Stormwater Detention Guaranty Bond: This Bond shall be security for the proper construction and operation of the Stormwater Conveyance System. The Stormwater Detention Guaranty Bond will be in the amount of ten percent (10%) of the elements of the Stormwater Conveyance System within the Infrastructure Cost Estimate and will be held by the Village in escrow for a three (3) year period after the certificate completion is issued by the Village for the Development, or for a two (2) year period after any necessary modification to or correction of any defect or deficiency in the Stormwater Conveyance System, whichever occurs later. At the end of the three-year guaranty period, the Village will inspect the Stormwater Conveyance System to verify whether any modification or corrective repair work needs to be performed, and, if such work is needed, the

Stormwater Detention Guaranty Bond , shall be retained for two-year period by the Village in accordance with this Subsection.

If the Village is required to draw on a Guaranty Bond by reason of the Developer's failure to fulfill its obligations under this Agreement, then the Developer, within twenty (20) calendar days thereafter, must cause the Guaranty Bond to be increased to its full original amount. "Developer Security" shall consist of the Developer Cash Escrow, the Performance LOC the General Guaranty Bond and the Stormwater Detention Guaranty Bond.

D. **Costs of Developer Security.** The Developer is responsible for the full cost of securing and maintaining the Developer Cash Escrow, the Performance LOC and the Guaranty Bonds.

E. **Forms of Letters of Credit.** The Performance LOC and the Guaranty Bonds must be in substantially the forms attached to this Agreement as **Exhibit "H",** with minor revisions as may be requested by the issuer and approved by the Village Attorney. Each letter of credit also must be from a bank having capital resources of at least $25,000,000, with an office in the Chicago Metropolitan Area or other location acceptable to the Village and insured by the Federal Deposit Insurance Corporation. Each letter of credit must, at a minimum, provide that: (i) it will expire no earlier than the later of two (2) years after the date of its issuance or thirty (30) calendar days after delivery to the Village, in the manner provided in Subsection 9.G. below, of written notice that the letter of credit will expire, (ii) it may be drawn on based on the Village Manager's certification that the Developer has failed to fulfill any of the obligations secured by the letter of credit, (iii) it does not require the consent of the Developer prior to any draw on it by the Village, (iv) it cannot be canceled without the prior written consent of the Village, and (v) if at any time it will expire within thirty (30) or any lesser number of calendar days, and if it has not been renewed, and if any obligation of the Developer secured by the letter of credit remains uncompleted or unsatisfactory, then the Village may call and draw down the letter of credit and thereafter either hold all proceeds as security for the satisfactory completion of all Developer obligations or employ the proceeds to complete all obligations and to reimburse the Village for any and all costs and expenses, including legal fees and administrative costs, incurred by the Village in connection therewith, as the Village may determine.

After completion of the Developer's obligations to construct and complete the Infrastructure in accordance with this Agreement, and after reimbursement of the Village for all costs and expenses incurred by the Village, including without limitation legal fees and administrative costs, then the Village will release to the Developer any proceeds remaining on deposit with the Village drawn from the Performance LOC and return the Performance LOC to the Developer. The Performance LOC will provide that the aggregate amount of the Performance LOC may be reduced once, upon joint written direction by the Developer and the Village, to the amount of twenty-five percent (25%) of the Infrastructure Cost Estimate when Infrastructure totaling seventy-five percent (75%) of Infrastructure Cost Estimate have been completed and accepted by the Village. The reduction to reimburse the Developer for payment of Infrastructure Improvement work satisfactorily completed will be allowed only after the Developer has provided certified contractors' sworn statements, certified schedule of values, partial or final waivers of lien, proof of payment of contractors and subcontractors, bank statements, etc., as may be appropriate, and all additional documentation as the Village may reasonably request to demonstrate satisfactory completion of the Infrastructure Improvement in question and full payment of all contractors, subcontractors, and material suppliers.

The Guaranty Bonds shall not be reduced to reimburse the Developer for any cost incurred in satisfaction its obligations under Section 8. or Section 9. of this Agreement.

F. **Replenishment of Developer Security.** If at any time the Village reasonably determines that the funds remaining in the Developer Cash Escrow or the Performance LOC or a Guaranty Bond are not sufficient to pay in full the remaining unpaid cost of all Infrastructure and all unpaid or reasonably anticipated Village costs, fees, and expenses, or that the funds remaining in a Guaranty Bond are not, or may not be, sufficient to pay all unpaid costs of correcting any and all defects and deficiencies in the Public Infrastructure and all unpaid or reasonably anticipated Village fees, costs, and expenses, then, within twenty (20) calendar days after a demand by the Village, the Developer must increase the amount of the Developer Cash Escrow or the Performance LOC or a Guaranty Bond to an amount, as determined by the Village Engineer, to be sufficient to pay unpaid costs, fees, and expenses. Failure by the Developer to increase the amount of the Developer Security will be grounds for the Village to retain any remaining balance of the Developer Cash Escrow and to receive the proceeds of, or to draw down, as the case may be, the entire remaining balance of the Performance LOC or a Guaranty Bond.

On completion of the Developer's obligations to construct and complete the Infrastructure pursuant to and in accordance with this Agreement, and after reimbursement of the Village for all fees and all costs and expenses, including legal fees and administrative costs, incurred by the Village, then the Village will release to the Developer any remaining funds in the Developer Cash Escrow and any proceeds remaining on deposit with the Village from the Performance LOC or a Guaranty Bond and will return the letters of credit to the Developer.

G. **Use of Funds in the Event of Breach of Agreement**. If the Developer, after all required notices and cure periods under this Agreement have been provided, fails or refuses to complete the Infrastructure in accordance with this Agreement, or fails or refuses to correct any defect or deficiency in the Public Infrastructure as required by Section 6 above or this Section 9, or fails or refuses to clean or repair property in accordance with a demand made pursuant to Subsection 5.E. or Subsection 7.D.(ii) of this Agreement, or fails or refuses to pay any amount pursuant to Section 8. above within five (5) business days after demand by the Village, or in any other manner fails or refuses to meet fully any of its obligations under this Agreement secured by a letter of credit, then the Village, in its discretion and after a delivery of a 5-day notice to the Developer and the Developer's failure to cure its failure or refusal within that 5-day period, may retain all or any part of the Developer Cash Escrow and/or draw on and retain all or any of the funds remaining in the appropriate letter of credit.

The Village thereafter will have the right to exercise its rights under Subsection 5.E. above and under this Subsection 9.G., to take any other action it deems reasonable and appropriate to mitigate the effects of any failure or refusal, and to reimburse itself from the proceeds of the Developer Cash Escrow and the appropriate letter of credit for all of its costs and expenses, including legal fees and administrative expenses, resulting from or incurred as a result of the Developer's failure or refusal to fully meet its obligations under this Agreement.

If the funds remaining in the Developer Cash Escrow or the appropriate letter of credit are insufficient to repay fully the Village for all costs and expenses, and to maintain a cash reserve equal to a required Guaranty LOC during the entire time the Guaranty LOC should have been maintained by the Developer, then the Developer, on demand of the Village therefor, must immediately deposit with the Village any additional funds as the Village reasonably determines are necessary to fully repay such costs and expenses and to establish such cash reserve.

After: (i) completion of the Developer's obligations to construct and complete the Infrastructure in accordance with this Agreement, (ii) correction of all defects and deficiencies in the Public Infrastructure as required by Subsection 6.E. above, (iii) repair of property in accordance with a demand made pursuant to Subsection 5.E. above, (iv) payment of all amounts demanded by the Village pursuant to this Section 9, (v) compliance with all other terms of this Agreement secured by a letter of credit, and (vi) reimbursement

of the Village for all fees and all costs and expenses, including legal fees and administrative costs, incurred by the Village; then the Village will release to the Developer any remaining Developer Cash Escrow and any proceeds remaining on deposit with the Village from any letter of credit and return the letter of credit to the Developer.

H. **Village Lien Rights.** If any money, property, or other consideration due from the Developer to the Village pursuant to this Agreement is not either recovered from the performance security deposits required in this Section 9. or paid or conveyed to the Village by the Developer within thirty (30) calendar days after a demand for payment or conveyance, then the money, or an amount equal to the Village's reasonable estimate of the value of the property or other consideration, together with interest and costs of collection, including legal fees and administrative expenses, will become a lien upon the Property and the Village will have the right to collect the amount or value, with interest and costs, including legal fees and administrative expenses, and the right to enforce the lien in the same manner as in statutory mortgage foreclosure proceedings.

SECTION 10. INFRASTRUCTURE SSA.

The Village will establish a special service area (the "Private Infrastructure SSA"), the boundaries of which will include all of the Property. The purpose of the Private Infrastructure SSA is to generate funds (the "Private Infrastructure SSA Tax Fund") that the Village may use to provide the special services of maintaining the Private Infrastructure if the Developer fails at any time to properly maintain the Private Infrastructure. The Private Infrastructure SSA will authorize the levy of a special service area tax from time to time on the Property to establish, replenish, and maintain the Private Infrastructure SSA Tax Fund sufficiently to pay for the special services only if the Developer or the homeowners association fails to pay for such services. The Village may from time to time levy the special service tax to replenish the Private Infrastructure SSA Tax Fund in a dollar amount, as determined by the Corporate Authorities of the Village, in their sole discretion, as reasonably necessary to pay for any special services. The Village will not levy a special service tax for collection prior to the issuance of a Certificate of Completion for the Development. The Developer approves, and agrees not to object to, the establishment of the Private Infrastructure SSA as provided in this Section 10 and the levying and expending the Private Infrastructure SSA Funds by the Village, at the Corporate Authorities of the Village's sole discretion, consistent with this Section 10. Nothing regarding the Private Infrastructure SSA will compel or require the Village to provide special services or to levy the SSA tax. The obligation to maintain the Private Infrastructure rests entirely and in perpetuity on the Developer as provided in Subsection 6.N . of this Agreement.

SECTION 11. LIABILITY AND INDEMNITY OF VILLAGE.

A. **No Village Liability.** The Developer acknowledges and agrees that the Village is not, and will not be, in any way liable for any damages or injuries of any kind that may be sustained as the result of: (i) the Village's review and approval of any plan or specification provided by the Developer or the Developer's representatives for the Development; or (ii) the issuance of any approvals, permits, certificates, or acceptances for the Development or use of the Property and that the Village's reviews, approvals, and issuances do not, and will not in any way, be deemed to insure the Developer or any of its transferees, successors-in-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property, and or any other person, and each and all homeowners associations or their equivalent within the Property, against damage or injury of any kind at any time.

B. **Village Procedures.** The Developer agrees not to challenge the Village's approval of this Agreement or of the Approval Ordinance or any other Village approved document that relates to the Development.

C. **Indemnification.** The Developer acknowledges that the accuracy and sufficiency of the Developer's Development Plans and related specifications for the Development are entirely the responsibility of the Developer and are not the responsibility of the Village, regardless of whether the Village reviews or approves the Developer's Development Plans and related specifications for apparent consistency with the Village's codes. The Developer agrees to indemnify the Village and all Village elected or appointed officials, officers, employees, agents, representatives, engineers, and attorneys (collectively the "Indemnitees") from any and all third party claims and causes of action of any kind that may be asserted at any time against the Village and any of the Indemnitees in connection with: (i) any design defect in the Developer's Development Plans and related specifications for the Development or any Infrastructure, regardless of the Village's review and approval of any Developer Development Plans or related specification for the Development or the Infrastructure or the Village's issuance of any approval, permit, certificate, or acceptance for the Development based on the apparent consistency of any Developer Development Plans or related specification for the Development or any Infrastructure Improvement; or (ii) the design, development, construction, maintenance, or use of any portion of the Property or the Infrastructure (each a "Claim" and collectively "Claims"). This indemnity does not apply or extend to any matter concerning maintenance by the Village of any Public Infrastructure after that Public Infrastructure has been accepted by the Village in accordance with this Agreement D.

D. **Defense Expenses.** The Developer agrees to pay all reasonable expenses, including without limitation attorney fees, litigation defense fees and costs, consultant fees and administrative expenses incurred by the Village in examining and tendering the defense of any Claim to the Developer in accordance with Subsection 11.C. above. The Village must promptly notify the Developer in writing of any Claim.

SECTION 12. BINDING NATURE OF AGREEMENT.

The obligations assumed by the Developer under this Agreement are binding on the Developer, on all of the Developer's transferees, successors-interest, all legal or beneficial owners of record, assigns, tenants, licensees and all subsequent owners of the Property or any part of the Property and each and all homeowners associations or their equivalent within the Property.

SECTION 13. TERM.

This Agreement will run with and bind the Property as long as the Development and its homeowners association continues to exist and operate, and will inure to the benefit of and be enforceable by the Developer, the homeowners association and the Village.

SECTION 14. ENFORCEMENT.

Either Party to this Agreement may enforce or compel the performance of this Agreement, in law or in equity, by suit, action, mandamus, or any other proceeding including without limitation specific performance, except that the Developer agrees that it will not seek, and does not have the right under any circumstances to seek, to recover a judgment against any Village elected or appointed official, officer, employee, agent, representative, engineer, or attorney on account of the negotiation, execution, or breach of this Agreement.

In addition to every other remedy permitted by law for the enforcement of the terms of this Agreement, the Village will be entitled to withhold the issuance of a building permit or a certificate of occupancy for work or occupancy within the Property at any time when the Developer has failed or refused to comply with a material obligation under this Agreement and has not, after the required notices stated herein, cured that failure or refusal within the cure periods, if any, allowed for that failure or refusal.

A. **Compliance with Laws.** The Developer agrees to comply with all applicable laws, rules and regulations of any federal, State or local entity or agency relating to the Development. The Developer will not discriminate against any employee or applicant for employment on the basis of race, color, religion, sex or national origin. To the fullest extent permitted by law, the Developer will take affirmative action to ensure that applicants are employed and treated during employment, without regard to their race, color, religion, sex or national origin. Such action shall include, but not be limited to, the following: employment, upgrading, demotion, transfer, recruitment, recruitment advertising, layoff, termination, rate of pay or other forms of compensation, and selection for training, including apprenticeship.

B. **Conflict of Interest and Prohibited Interest Disclosures.** Upon the Village's request from time to time during the Term of this Agreement, the Developer will provide a list of all entities owning a greater than one percent (1%) interest in the Developer. Based in part on the information provided by the Developer and in part on information from the Village's independent investigation, the Village will affirm that its Corporate Authorities, and all appropriate Village elected and appointed officials, officers, employees, agents and representatives of the Village, have or will comply with the disclosure and conflict-of-interest provisions of the Public Officer Prohibited Activities Act (50 ILCS 105/3), the TIF Act (65 ILCS 5/11-74.4-4(n)) and the Illinois Governmental Ethics Act (5 ILCS 420). Upon the Village's request, the Developer shall provide the Village with all information required for compliance with the annual TIF report that the Village is required to file with the State of Illinois Comptroller or any such similar financial information, and required for the Village to comply with any disclosure and transparency ordinance or law enacted by the State of Illinois or DuPage County. In addition, the Developer shall provide, on an annual basis, the information required by the TIF Act.

C**.** **Successors and Assigns.** The Developer shall be liable for all of the Developer's obligations under this Agreement. All obligations assumed by the Developer under this Agreement shall be binding on the Developer, and on any and all of the Developer's successors and assigns, and on any and all of the respective successor owners of all or any portion of the Property. To assure that the Developer's successors, assigns and successor owners of all or any portion of the Property have notice of this Agreement and the obligations created by it, the Developer shall:

1. Deposit with the Village Clerk, within thirty (30) calendar days after the Acquisition Date, any consents or other documents necessary to authorize the Village to record a Memorandum of this Agreement, in form and substance reasonably acceptable to the Developer and the Village, in the Office of the Recorder of Deeds of Cook County, Illinois;
2. Notify the Village in writing at least thirty (30) calendar days prior to any date that the Developer intends to transfer fee title to any portion of the Property to any person not a party to this Agreement;
3. Include in the Restrictive Covenant a memorandum or other similar reference(s) to this Agreement sufficient to put third parties on notice of the existence of this Agreement; and

4. Require, prior to the transfer of all or any portion of the Property to any person or entity not a Party to this Agreement that occurs prior to the Substantial Completion Date, the transferee to execute an enforceable written assignment and assumption agreement, in form and substance reasonably approved by the Village Attorney (the "**Transferee Assignment and Assumption Agreement**"), agreeing to be bound by this Agreement and to provide the Village, after request, with reasonable assurance of the financial ability of the transferee to meet any remaining obligations under this Agreement. The Village and the Developer shall record against the Property a memorandum of this Agreement that obligates the owner of the Property from time to time to perform the obligations of the Developer under this Agreement and shall require notice to the Village of any transfer of the Property, which memorandum shall be in form and substance reasonably satisfactory to the Village and the Developer.

The Village agrees that, after a successor becoming bound to the obligations of the Developer created in the manner provided in this Agreement, and providing the financial assurances required in this Section, the liability of the Developer shall be deemed automatically released. The failure of the Developer to provide the Village with a fully executed copy of a Transferee Assignment and Assumption Agreement before completing the transfer shall result in the Developer remaining fully liable for all of the Developer's obligations under this Agreement, but shall not relieve the transferee of its liability for those obligations as a successor to the Developer.

D. **Representations and Warranties of the Developer.**

1. No Gifts. The Developer covenants that no officer, member, manager, stockholder, employee or agent of the Developer, or any other person connected with the Developer, have made, offered or given, either directly or indirectly, to any member of the Corporate Authorities, or any officer, employee or agent of the Village, or any other person connected with the Village, any money or anything of value as a gift or bribe or other means of influencing his or her action in his or her capacity with the Village.
2. Assignment. The Developer may not assign or transfer some or all of its rights or obligations under this Agreement without the prior written consent of the Village, the granting or denial of which consent shall be in the sole discretion of the Village; provided, however, that, without the Village's prior consent, the Developer may assign this Agreement to an entity controlling, controlled by, or under common control with the Developer and/or assign or collaterally assign any of the Developer's rights and/or obligations to the Lender.
3. Prevailing Wage. The Developer and its contractors and subcontractors are required to pay prevailing wages for all or portions of the Development work only if the Illinois Prevailing Wage Act (820 ILCS 130/) (the "IPWA") requires payment of prevailing wages.
4. Property Acquisition. The Developer shall provide the Village with sufficient documentation regarding Developer's ownership of the Property for the Development.
5. Corporate Authorization. This Agreement has been submitted for consideration and review by the board of directors, corporate officers, shareholders, members and/or managers of the Developer, and the Developer's board of directors, corporate officers, shareholders, members and/or managers have taken all

actions required to be taken prior to the execution of this Agreement in order to make the same binding upon the Developer according to the terms hereof, and any and all actions of the Developer's board of directors, corporate officers, shareholders, members and/or managers, as the case may be, precedent to the execution of this Agreement have been undertaken and performed in the manner required by law.

Agreement shall be deemed to be the agreement of any official, agent, employee, consultant or attorney of the Village, in their individual capacity, and no official, employee or attorney of the Village shall be liable personally under this Agreement or be subject to any personal liability or accountability by reason of or in connection with or arising out of the execution, delivery and performance of this Agreement, or any failure in connection therewith.

SECTION 15. INSURANCE AND INDEMNIFICATION.

A. Liability Insurance Prior to Completion. Prior to issuance of Permits, the Developer shall procure and deliver evidence of such policies to the Village, at the Developer's cost and expense, and shall maintain in full force and effect during any period of construction and through completion of construction of the Development, for both ongoing and completed operations, the following types of insurance, written on the comprehensive form and as an "occurrence" policy, in not less than the following amounts:

1. Commercial General Liability Insurance (including property damage insurance): $1,000,000.00 per occurrence and $2,000,000.00 in the aggregate.
2. Contractor's Liability Insurance: $1,000,000.00 per occurrence and $2,000,000.00 in the aggregate.
3. Automobile Insurance: $1,000,000.00 per occurrence and $1,000,000.00 in the aggregate.
4. Umbrella Coverage or Excess Liability Coverage: $5,000,000.00 in the aggregate.
5. Workers Compensation Insurance: Statutory Amount.

Said insurance shall state that the insurance provided by the Developer shall be primary and that any provision of any contract of insurance or other risk protection benefit or self-insurance policy purchased or in effect or enacted by the Village and any other insurance or benefit of the Village shall be in excess of the Developer's insurance. All such policies shall be in such form and issued by such companies as shall be reasonably acceptable to the Village. Each such policy, including any related insurance certificates, endorsements and riders, shall expressly name "the Village of Western Springs and its appointed and elected officials, mayor and trustees, employees, engineers, attorneys, agents and representatives" as additional insureds.

Prior to commencement of construction of the Development, the Developer shall furnish to the Village the above-required certificates of insurance, policies, riders and policy endorsements, with premiums paid in full that contain the insurer(s) written confirmation that the nature, scope, duration and amount of insurance coverage meets the requirements of this Agreement and shall remain in effect for all aspects of the Development for both ongoing and completed operations. The Developer shall provide the Village with satisfactory proof of the above insurance requirements in the form of a certificate executed by an insurer with no less than an A rating by the most recent "AM Best Insurance Rating Guide."

The Village shall be given written notice at least thirty (30) calendar days prior to any cancellation or material amendment of the Developer's insurance policies required hereunder. Alternatively, the Developer may satisfy its insurance obligations in this **Subsection 15.A.** by way of a blanket policy or policies, which includes other liabilities, properties and locations meeting the minimum insurance coverage amounts. The Developer shall provide to the Village a replacement certificate prior to expiration, cancellation or material modification of any policy.

B. Developer's Risk Prior to Completion. Prior to completion of the construction of the Development, as certified by the Village, the Developer shall keep in force at all times builders risk insurance or similar insurance coverage, on a completed value basis, in non-reporting form, against all risks of physical loss, including collapse, covering the total value of work performed and equipment, supplies and materials furnished for the Development (including on-site stored materials), all as to work by the Developer. Such insurance policies shall be issued by companies satisfactory to the Village. The Developer shall provide written notice to the Village at least twenty-one (21) calendar days before any such policy is cancelled or materially modified.

C. Village Review. The Developer acknowledges and agrees that, except for breaches of this Agreement by the Village, the Village is not, and shall not be, in any way liable for any damages or injuries of any kind that may be sustained as the result of the Village's review, approval or denial of any plans or failure to review any plans for the Property or the Development, or the issuance of any approvals, permits, certificates or acceptances for the development or use of the Property or the Development, and that the Village's review and approval of those plans and the Development and issuance of those approvals, permits, certificates or acceptances does not, and shall not, in any way be deemed to insure the Developer, or any of its heirs, successors, assigns, tenants, invitees and licensees, or any other person, against damage or injury of any kind at any time.

D. Village Procedure. The Developer has been advised by the Village that notices, meetings and hearings have been properly given and held by the Village with respect to the approval of this Agreement, and the Developer agrees not to challenge the Village's approval of this Agreement on the grounds of any procedural infirmity or of any denial of any procedural right.

E. Indemnity and Defense Expense. The Developer undertakes and assumes all potential liability for any injuries, deaths, losses, damages, claims or judgments of any nature whatsoever resulting from or in connection with its/their redevelopment activities at the Property, and the Developer shall hold harmless, indemnify and defend the Village against any such losses, except to the extent that the same is caused by the negligence or willful misconduct of the Village or its elected and appointed officials, officers, employees, agents, contractors and representatives, or by the breach of this Agreement by the Village.

1. Developer Defense Expense. The Developer shall, and does, agree to pay all reasonable expenses incurred by the Village, the Village's Corporate Authorities, and all Village elected and appointed officials, officers, employees, agents, contractors and representatives in defending against any and all claims, demands, causes of action, investigations, lawsuits, proceedings, liabilities, actions or penalties of any kind that may, at any time, be asserted against any of the Parties by any person(s) in connection with the Development, the approval of this Agreement, any terms or provisions of this Agreement, or the Developer's duties, obligations and performance under this Agreement, including, without limitation, any claims, demands, causes of action, investigations, lawsuits, proceedings, liabilities, actions or penalties related to or associated with environmental conditions, matters or contaminants concerning or relating to the Property, in each case,

except to the extent caused by the negligence or willful misconduct of the Village or its elected and appointed officials, officers, employees, agents, contractors and representatives. These expenses shall include, without limitation, all reasonable out-of-pocket expenses, such as attorneys' and experts' fees and other litigation costs.

2. Mutual Indemnification. Each Party shall indemnify, hold harmless and defend the other Party and their respective officers, employees, agents, contractors and representatives against all injuries, deaths, losses, damages, claims, suits, liabilities, liens, including mechanic's liens, judgments, costs and expenses, including reasonable attorney fees, which may in any way arise from or accrue against the other Party as a consequence of this Agreement or which may in any way result therefrom, other than those indemnified matters which arise from or relate to the negligence or willful misconduct of the other Party or its officials, officers, employees, agents, contractors and representatives. The provisions of this Subsection and any other indemnification obligations on the part of either Party shall survive the termination or expiration of this Agreement for a period of two (2) years. In any such action against either Party, the other Party shall, at its own expense, appear, defend and pay all charges of reasonable attorney fees and all reasonable costs and other reasonable expenses arising therefrom or incurred in connection therewith; and, if any judgment shall be rendered against the Party in any such action, the other Party shall, at its own expense, satisfy and discharge such judgment. The prevailing Party shall indemnify the other Party for any costs, including reasonable attorney fees, in enforcing the provisions of this Agreement.

SECTION 16. DEFAULT; CURE.

In addition to any other "Event of Default" identified in this Agreement, an "**Event of Default**" shall mean a failure on the part of either Party to comply with any material term, representation, warranty, covenant, agreement or condition of this Agreement, which failure is not cured within thirty (30) calendar days after written notice thereof; provided, however, if the failure is of a nature that it cannot be cured within thirty (30) days, then the defaulting Party shall have such additional time as is reasonably necessary to cure such failure so long as the defaulting Party commences activities designed or intended to cure such Event of Default within such thirty (30) calendar day period and thereafter diligently pursues activities designed or intended to cure such Event of Default to completion. Upon an Event of Default by the Village in the performance of any of its obligations under this Agreement, the Developer's remedies shall include specific performance (including statutory interest on any sums deemed to be improperly withheld), and any and all rights and remedies available to the Developer at law or in equity, including termination of this Agreement. The Village shall not be liable for punitive damages, consequential damages or lost profits. Upon an Event of Default by the Developer in the performance of any of its obligations under this Agreement, the Village shall be entitled to take such action as authorized by this Agreement and pursue any other remedies available at law or in equity; provided, however, that the Developer shall in no event be liable for punitive or consequential damages. Notwithstanding anything to the contrary in this Agreement, the Developer's defaults, and the Village's remedies upon such defaults, described in **Subsections 3.A.** and **5.E.** and shall be only as expressly set forth in **Subsection 3.A.** and **5.E.**, respectively.

SECTION 17. GENERAL PROVISIONS.

A. **Notice.** Any notice or communication required or permitted to be given under this Agreement shall be in writing and shall be delivered: (i) personally; (ii) by a reputable overnight

courier; (iii) by certified mail, return receipt requested, and deposited in the U.S. Mail, postage prepaid; or (iv) by electronic internet mail ("Email"). Email notices shall be deemed valid only to the extent that they are: (a) opened by the recipient on a business day at the address set forth below; and (b) followed by delivery of actual notice in the manner described in either (i), (ii) or (iii) above within three (3) business days thereafter at the appropriate address set forth below. Unless otherwise provided in this Agreement, notices shall be deemed received after the first to occur of: (a) the date of actual receipt; or (b) the date that is one (1) business day after deposit with an overnight courier as evidenced by a receipt of deposit; or (c) the date that is three (3) business days after deposit in the U.S. Mail, as evidenced by a return receipt. By notice complying with the requirements of this **Subsection 17.A.**, each Party to this Agreement shall have the right to change the address or the addressee, or both, for all future notices and communications to them, but no notice of a change of addressee or address shall be effective until actually received.

Notices and communications to the Village shall be addressed to, and delivered at, the following addresses:

Ellen Baer Village Manager Village of Western Springs 740 Hillgrove Avenue Western Springs, Illinois 60558 Direct: 708.246.1800 Email: ebaer@wsprings.com	With a copy to: Michael T. Jurusik, Esq. Klein, Thorpe and Jenkins, Ltd. 900 Oakmont Lane, Suite 301 Westmont, Illinois 60559 Cell Number: 708.638.0355 Email: mtjurusik@ktjlaw.com

Notices and communications to the Developer shall be addressed to, and delivered at, the following addresses:

Paul McNaughton McNaughton Development, LLC 11S220 Jackson Street Burr Ridge, Illinois 60527 Direct: 630.325.4048 Email: pmcnaughton83@yahoo.com	With a copy to: James E. Olguin, Esq. 16101 South 108th Avenue, 1st Floor Orland Park, Illinois 60467 Direct: 630.403.8003 Email: jim@olguinlawllc.com

B. **Time of the Essence.** Time is of the essence in the performance of this Agreement.

C. **Rights Cumulative.** Unless expressly provided to the contrary in this Agreement, each and every one of the rights, remedies and benefits provided by this Agreement shall be cumulative and shall not be exclusive of any other rights, remedies and benefits allowed by law.

D. **Non-Waiver.** The Village shall be under no obligation to exercise any of the rights granted to it in this Agreement. The failure of the Village to exercise at any time any right granted to the Village shall not be deemed or construed to be a waiver of that right, nor shall the failure void or affect the Village's right to enforce that right or any other right.

E. **Consents**. Unless otherwise provided in this Agreement, whenever the consent, permission, authorization, approval, acknowledgement, or similar indication of consent of any Party to this Agreement, or of any duly authorized officer, employee, agent, or representative of any Party to this Agreement, is required in this Agreement, the consent, permission, authorization, approval, acknowledgement, or similar indication of consent will be in writing. The Property Owner has further

executed a "Written Consent of the Property Owner" to allow the Developer to enter into this Agreement, a copy of which is attached hereto as **Exhibit "I"** and made a part hereof.

F. **Facilitation of Agreement**. The Village and the Developer will act in good faith and in a reasonable and cooperative manner with respect to consents, approvals, and other matters contemplated under this Agreement. No consent or approval may be unreasonably delayed, conditioned, or withheld. The Village and the Developer will execute, acknowledge, and deliver reasonable documents and other instruments necessary to fully carry out the terms of this Agreement.

G. **Governing Law.** This Agreement shall be governed by, and enforced in accordance with, the laws of the State of Illinois.

H. **Severability.** It is the intent of the Parties that, should any provision, covenant, agreement or portion of this Agreement or its application to any person or property be held invalid by a court of competent jurisdiction, the remaining provisions of this Agreement and the validity, enforceability and application to any person or property shall not be impaired thereby, but the remaining provisions shall be interpreted, applied and enforced so as to achieve, as near as may be, the purpose and intent of this Agreement to the greatest extent permitted by applicable law.

I. **Entire Agreement.** This Agreement constitutes the entire agreement between the Parties and supersedes any and all prior agreements and negotiations between the Parties, whether written or oral, relating to the subject matter of this Agreement.

J. **Interpretation.** This Agreement shall be construed without regard to the identity of the Party who drafted the various provisions of this Agreement. Moreover, each and every provision of this Agreement shall be construed as though all Parties to this Agreement participated equally in the drafting of this Agreement. As a result of the foregoing, any rule or construction that a document is to be construed against the drafting Party shall not be applicable to this Agreement.

K. **Amendments and Modifications.** No amendment or modification to this Agreement shall be effective until it is reduced to writing and approved and executed by all Parties to this Agreement in accordance with all applicable statutory procedures.

L. **Authority to Execute.** The Village warrants and represents to the Developer that the persons executing this Agreement on its behalf have been properly authorized to do so by the Corporate Authorities of the Village. The Developer warrants and represents to the Village that: (i) the Developer has the full and complete right, power and authority to enter into this Agreement and to agree to the terms, provisions and conditions set forth in this Agreement and to bind the Property as set forth in this Agreement; (ii) all legal actions needed to authorize the execution, delivery and performance of this Agreement by the Developer have been taken; and (iii) neither the execution of this Agreement nor the performance of the obligations assumed by the Developer will: (a) result in a breach or default under any agreement to which the Developer is a party or to which it or the Property is bound; or (b) violate any statute, law, restriction, court order or agreement to which the Developer or the Property are subject.

M. **No Third-Party Beneficiaries/No Joint Venture.** Nothing in this Agreement, whether expressed or implied, is intended to confer any rights or remedies under or by reason of this Agreement on any other entity other than the Village and the Developer, nor is anything in this Agreement intended to relieve or discharge the obligation or liability of any third persons to either the Village or the Developer, nor shall any provision give any third parties any rights or subrogation or action over or against either the

Village or the Developer. This Agreement is not intended to and does not create any third-party beneficiary rights whatsoever. Nothing in this Agreement, or any actions of the Parties to this Agreement, shall be construed by the Parties or any third-party person to create the relationship of a partnership, agency or joint venture between or among such Parties.

N. **Force Majeure**. Either Party will be temporarily excused from the performance of its obligations under this Agreement when and to the extent the non-performing Party's performance is delayed or prevented by any circumstances beyond the non-performing Party's control, including but not limited to fire, flood, explosion, epidemic, pandemic, strikes or other labor disputes, acts of God or public emergency, war, rioting, malicious damage, acts or omission of any governmental authority, delay or failure or shortage of any type of transportation, equipment or service from a public utility needed for their performance or action or omission of the other Party (collectively, "Force Majeure"), provided that:

a. The non-performing Party gives the other Party reasonably prompt written notice describing the particulars of Force Majeure including, but not limited to, the nature of the occurrence, and continues to furnish timely reports with respect thereto during the period of Force Majeure;
b. The excuse of performance is of no greater scope and of no longer duration than is required by Force Majeure;
c. No obligations of either Party that arose before Force Majeure causing the excuse of performance are excused as a result of Force Majeure; and
d. The non-performing Party uses commercially reasonable and diligent efforts to remedy its inability to perform.

Economic hardship or other financial considerations, including but not limited to increases in the costs of construction materials, equipment or construction labor, of the Developer will not constitute an event of Force Majeure.

O. **Counterparts.** This Agreement may be executed in counterparts, each of which shall constitute an original document, which together shall constitute one and the same instrument.

P. **Enforcement of Agreement.** The provisions of this Agreement shall be enforceable in any action in law or in chancery. The Parties hereto agree that any legal action to enforce any right or obligation contained in or arising out of this Agreement shall be brought in the Circuit Court of Cook County, Illinois.

Q. **Exhibits.** The following Exhibits are attached hereto and made a part hereof or incorporated herein by reference and made a part hereof:

Exhibit "A":	Site Plan for the Development, Revised as of January 27, 2025 (attached)
Exhibit "B":	"Approval Ordinance": Western Springs Ordinance No. 25-_____ approving a Conditional Use Permit for Planned Development for the Construction and Operation of the Development with Conditions (attached)
Exhibit "C":	Legal Description of the Property (attached)
Exhibit "D":	Final Development Plans (to be attached after Village Board approval)
Exhibit "E":	Construction Schedule (attached)
Group Exhibit "F":	**Confidential** Developer Letter of funding sources for completion of the Development and Supporting Submittals and Developer's Lender's

	Financing Commitment Letter issued by _____ Bank and dated _____, 2025 (not attached; on file with the Village Clerk's Office)
Exhibit "G":	Operations and Maintenance Manual and Specifications and Maintenance Schedule for Stormwater Conveyance System
Exhibit "H":	Forms of Letters of Credit (attached)
Exhibit "I":	Written Consent of the Property Owner to Allow Developer to Enter into Redevelopment and Maintenance Agreement (attached)

In the event of a conflict between an Exhibit and the text of this Agreement, the text of this Agreement shall control.

R. **Estoppels.** Within ten (10) business days following request by either Party from time to time, the other Party shall execute and deliver to the requesting Party an estoppel certificate that certifies: (i) that this Agreement is unmodified and in full force and effect or, if there had been modifications, that this Agreement is in full force and effect as modified, (ii) that the Party is not in default of this Agreement or specifying any defaults, and (iii) such other information that may be reasonably requested by the Party.

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the dates set forth below, and the date of the last signatory below shall be inserted on page 1 of this Agreement, as the Effective Date of this Agreement.

APPLICATION FOR DEVELOPMENT APPROVAL AND ZONING RELIEF;

MAP AMENDMENT AND CONDITION USE PERMIT FOR PLANNED DEVELOPMENT

To: Heather Valone
Director of Community Development
Village of Western Springs
4353 Wolf Road
Western Springs, IL 60558

By: Paul R. McNaughton
John Barry
McNaughton Development, LLC
11S220 Jackson Street
Burr Ridge, Illinois 60527

Project Summary: McNaughton Development LLC, as the contract purchaser of the property at 5600 S. Wolf Road in Western Springs is making the following application to allow for the demolition of the existing underutilized office building and its associated parking lots and for the construction of twenty-nine new three-story townhome units. The current 24,000 square foot office building and the parking lot sit on two parcels of land that total 2.414 acres. The final development will also include 0.341 acre of land currently owned by the village as a previous right-of-way for Lawn Avenue. This Lawn Area right-of-way is currently being maintained by the Heritage Estates Townhome Association as a detention facility. The Heritage Crossing townhome development would require the vacation of the Lawn Avenue right-of-way and the consolidation of it and the two existing parcels creating a 2.755-acre parcel to be rezoned under a Planned Development with an underlaying zoning district of R4 – Multi Family Residence District.

Applicant: McNaughton Development LLC, will be the owner and general contractor for the new twenty-nine three-story for sale townhome units within the Heritage Crossing development.

Subject Property Address: 5600 S. Wolf Road, Western Springs, Illinois 60558

Legal Description:

PARCEL 1: THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION BEING A SUBDIVISION OF THE EAST 473 FEET OF THE NORTH 775.5 FEET (EXCEPT THE EAST 145.2 FEET OF THE WEST 178.2 FEET OF THE NORTH 350 FEET THEREOF) OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, IN COOK COUNTY, ILLINOIS.

PARCEL 2: LOT 1 IN VIAL'S FAIRWAY, A SUBDIVISION OF PART OF THE NORTH EAST 1/4 OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, ACCORDING TO THE PLAT RECORDED APRIL 17, 1957 AS DOCUMENT 16879637 IN COOK COUNTY, ILLINOIS.

LAWN AVENUE: THAT PART OF THE 66 FEET WIDE VACATED LAWN AVENUE (VACATED PER DOCUMENT NO. 96138577), LYING SOUTH OF THE NORTH LINE OF WESTERN SPRINGS TOWNHOMES, RECORDED MARCH 29, 1999, AS DOCUMENT NO. 99297584, LYING NORTH OF THE SOUTH LINE OF RIDGEWOOD UNIT 12, RECORDED OCTOBER 6, 1965, AS DOCUMENT NO. 19610359, LYING WEST OF THE EAST LINE OF THE WEST 1/2 OF LOT 4 (EXCEPT THE NORTH 75 FEET THEREOF), LOTS 5 AND 6 IN MAXTED SUBDIVISION, RECORDED NOVEMBER 13, 1948, AS DOCUMENT NO. 14442019, AND LYING EAST OF THE WEST LINE OF RIDGEWOOD UNIT NO. 11, RECORDED APRIL 3, 1964, AS DOCUMENT NO. 19089916, IN THE EAST HALF OF SECTION 18, TOWNSHIP 38 NORTH, RANGE 12 EAST OF THE THIRD PRINCIPAL MERIDIAN, COOK COUNTY, ILLINOIS.

PIN:

PARCEL 1:	18-18-200-038
PARCEL 2:	18-18-200-017
LAWN AVENUE RIGHT-OF-WAY:	18-18-200-001

Lot Size: Approximately 2.755 Acres

Current Zoning District:

PARCELS 1 & 2: O – Limited Office District
LAWN AVENUE
RIGHT-OF-WAY: R4PUD – Residential Planned Unit Development

Zoning Approval & Relief Requested:
Comprehensive Land Use Plan Amendment: Amend the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre).

Zoning Map Amendment: Amend to rezone the property to R4 – Multiple Family Residence District (Chapter 10-6-5) allowing for a permitted use of multi-family dwellings not exceeding six (6) dwelling units per building

Plat of Consolidation: Approval of a Plat of Consolidation that will result in creating a parcel of 2.755 acres which is less than the five-acre minimum requirement within the R4 - Multiple Family Residence District and the Planned Development

Resubdivision: Approval of a Plat of Resubdivision (10-10-3) to allow for the construction of twenty-nine townhome units, a stormwater detention facility and a private road

Conditional Use for a Planned Development: Approval of Conditional Use for a Plan Development with requested deviations from the R4 – Multi Family Residence District as reflected in the following exhibits.

Vacation of Right-of-Way: Approval of the Vacation of the existing Lawn Avenue as depicted in the preceding legal description and included in the following plat of consolidation.

PROJECT NARRATIVE DESCRIPTION
McNaughton Development LLC is the contract purchaser and Casey & Fran Gaik are the owners of the property located at 5600 S. Wolf Road, Western Springs. The property is currently zoned O – Limited Office District. It is one of just five properties within the Village of Western Springs with this zoning designation. The site is improved with a 24,000 square foot office building with its associated parking lots. The property, originally developed as a private school in the 1960's was later converted into and expanded for its current office use in the early 1990's. In recent years the tenant base has vacated the property to the point where the building is at five percent occupancy due to the building's obsolescence. The owners have aggressively marketed the property to other prospective tenants with no success. In addition, it has not been attractive to owner users for any other permitted or conditional use under the O – Limited Office District. It was then decided by the owner, at the suggestion of their real estate broker, that after great effort, the property value would most likely be found in redevelopment for multi-family residential use.

The proposed multi-family residential use will continue to provide for an orderly zoning transition from the intersection of 55th Street and Wolf Road. The existing zoning classification at that corner is C2 – Community Shopping District surrounded by a small A – Single Family Residence parcel

improved with a ComEd facility, a R4 – Multi-Family Residence District improved with condominium units and a R4 – Multi-Family Residence District Planned development improved with townhome units.

The proposed zoning request would permit the resubdivision of and the redevelopment of the property into twenty-nine three-story townhome units. The twenty-nine units will be constructed in eight different buildings ranging from duplex units to four, five and six wide unit buildings. The units will be three stories tall with a two-car garage and recreation room on the ground level, the main living areas on the middle level and the bedrooms on the third level. There are no roof top deck options being offered at this time. The buildings will be 38 feet tall as measured from the proposed final grade to the midpoint of the roof. The living area within the units will range from 2,400 to 2,600 square feet. All of the units will have three bedrooms, two full and two one-half bathrooms and two-car garages. None of the units will have a basement.

The property will have two access points with one at Park Place west of Wolf Road and a second, controlled access via the existing terminus of Heritage Court to the north of the site. The current access to Wolf Road is being eliminated due to a conflict with the current deceleration lane approach to Park Place, conflicts with entrance spacing between the condominium development and Park Place, and the county highway department's preference to eliminate curb cuts along minor arterial roadways such as Wolf Road. By offsetting the access to Park Place, providing entry monumentation and proposing offsite landscaping site access has been proposed in such a way to lessen the impact on the current property owners along the south side of Park Place. A preliminary application was made to the Cook County Highway Department and their response noted that they agreed with the above noted reasoning for the applicant's decision to provide access from Park Place and not directly from Wolf Road. The controlled access point to the north will be improved with four-foot heigh decorative aluminum operable gate. The gate will prevent cut through traffic from eastbound 55th Street to southbound Wolf Road. Gate access will be granted solely to the current fourteen residents along Heritage Court and the prospective twenty-nine residents of this proposed development. Emergency services will also be granted access to the gate.

The property will comply with the stormwater ordinances of both the Metropolitan Water Reclamation District (MWRD) and the Village of Western Springs. The proposed redevelopment will result in a reduction in the site's impervious surface as compared to the existing conditions, volume control storage and stormwater detention storage. The applicant is aware of the downstream flooding issue that are a result of approximately one hundred eighty acres of undetained stormwater from the LaGrange Highlands area east of Wolf Road which is directed through this site and ultimately reaching Flagg Creek. The proposed development will have no detrimental effect to downstream owners and the stormwater improvements will provide for marginal improvements to the area.

The proposed development is a for sale townhome development with private improvements that will be managed by its homeowner's association. The expected base purchase price is anticipated to be between $800,000.00 and $850,000.00. The exterior and interior finishes will be of the utmost quality to support the anticipated base pricing. At the same time, interior finish upgrades will be offered to the purchaser. It is anticipated that the target market will be young professionals with no or very young children and active adult move down buyers native to Western Springs and the surrounding communities. Elevator options will be possible in at least fifty percent of the units. The private improvements to be owned and maintained by the association will include the common area landscaping, stormwater improvements and the extended Heritage Crossing. Water main improvements will be turned over to Village of Western Springs and the sanitary sewer improvements to the La Grange Highlands Sanitary District.

I. PETITION FOR REQUESTED ZONING RELIEF

The applicant is requesting the following zoning relief and approvals as part of this applications:

(1) Amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre).

(2) Zoning Map Amendment

Existing Zoning and Land Use:	O – Limited Office District / 24,000 square foot office building	
Adjacent Zoning and Land Use:	**North**	C2 – Community Shopping District/ gas station and community shopping, A – Single Family Residence parcel / ComEd facility, R4 – Multi-Family Residence District / condominium units and R4 – Multi-Family Residence District Planned development / townhome units.
	South	A – Single Family Residence
	East	Unincorporated Cook County Single-Family Residence District R4
	West	A – Single Family Residence
Proposed Zoning and Land Use:	R4 – Multi Family Residence District allowing for a permitted use of multi-family dwellings not exceeding six (6) dwelling units per building	

(3) Plat of Consolidation
Approval of a Plat of Consolidation that will result in creating a parcel of 2.755 acres which is less than the five-acre minimum requirement within the R4 - Multiple Family Residence District and the Planned Development. The consolidation of the parcels will allow for an orderly redevelopment of the property, particularly as it relates to stormwater management.

(4) Resubdivision
Approval of a Final Plat of Resubdivision to allow for the construction of twenty-nine townhome units, a stormwater detention facility and a private road on a parcel of less than the five acres minimum requirement. The applicant is requesting to bypass the Resubdivision requirement to submit preliminary plans and simply request final plan approvals in light of the size of the property.

(5) Conditional Use Permit
Approval of a Conditional Use to allow for a Planned Development with the following deviations from the requirements R4 – Multi Family Residence District and per the following plans and exhibits.

R4 – Multiple Family Residence District Requirements vs Requested Relief:

Minimum Development Parcel Size
Required: 5 Acres
Requested: 2.755 Acres

Front Yard Setback
Required: Twenty-Five Feet (25)
Requested: Twenty Feet (20) Garage Face to the Closer of the Sidewalk or Curb with the permitted encroachment of the Middle Level Deck and Third Level Living Area

Interior Sideyard Yard Setback
Required: Thirty Feet (30)
Requested: Eight Feet (8) with the permitted encroachment of bay windows

Corner Sideyard Yard Setback
Required: Twenty Feet (25)
Requested: Twenty Feet (25) with the permitted encroachment of bay windows

Rear Yard Setback
Required: Thirty Feet (30)
Requested: Twenty-Five Feet (25) with the permitted encroachment of Middle and Third Level Projections and Balconies

Multiple – Family Dwelling Height
Required: Thirty-Five (35) Feet
Requested: Thirty-Eight (38) Feet

Maximum Building FAR
Required: 54,311.51 SF
Requested: 126,008.40 SF

Vacation of Right-of-Way

Approval of the vacation of the 0.341 acre of land currently owned by the village as a previous right-of-way for Lawn Avenue. The applicant is requesting that the acquisition cost of this vacation be made at no cost to the applicant. The applicant feels that its offer to make stormwater improvements to the site, including to the detention facility, and its commitment and its successors commitment of perpetual care and maintenance is sufficient compensation.

(1) MAP AMENDMENT STANDARDS

Pursuant to Section 10-3-12(F)(1) (Map Amendments) of the DCO, the Applicant must provide the information relative to each of the Standards that are to be used by the Plan Commission and the Village Board to evaluate the suitability of a map amendment.

a. Existing uses of property within the general area of the property in question. The property is currently zoned O – Limited Office District and is along Wolf Road which is under the jurisdiction of the Cook County Highway Department.

North Parcels: Gas station and community shopping, ComEd facility, condominium units and townhome units.

East Parcels: Unincorporated Cook County Single-Family Residence District R4

South & West Parcels: Single Family Home

b. The zoning classification of property within the general area of the property in question.

North Parcels:
C2 – Community Shopping District
A – Single Family Residence
R4 – Multi-Family Residence District
R4 – Multi-Family Residence District Planned Development.

East Parcels: Unincorporated Cook County Single-Family Residence District R4

South & West Parcels: A- Single Family Residence

c. The suitability of the property in question to the uses permitted under the existing zoning classification.

The property is not suitable for uses permitted under the O – Limited Office District. This zoning district permits for professional offices, including, but not limited to, offices for attorneys, physicians, dentists, architects, consulting engineers, insurance agents, and village government offices. This use has proven to have failed in light of the current building occupancy being at 5% for an extended period of time. The zoning district does permit for multi-family however, when placed on the second floor of the other permitted uses within the development.

d. **The trend of development, if any, in the general area of the property in question, including changes, if any, which have taken place in its present zoning classification.**

The trend of development is for multi-family residential construction. In fact, the existing office building is not compatible to the trend of development. The existing office uses and commercial developments are all located along 55th Street. Wolf Road in the southwest portion of Western Springs is dominated by residential development. This property is bounded of the north with a three-story condominium building and two-story townhomes. Due to the unique shape of this parcel and its size, the continuation of a multi-family product is an appropriate transition to the single-family development to the west and south

e. **The suitability of the property in question for permitted uses listed in the proposed zoning classification.**

The property is suitable for the uses within the R4 – Multi-Family Residence District Planned Development.

The compatibility of the surrounding property with the permitted uses listed in the proposed zoning classification.

Being residential in nature, the proposed R4 – Multi-Family Residence District Planned Development is compatible with the surrounding residential uses.

The objectives of the current comprehensive plan for the village and the impact of the proposed amendment on the said objectives.

The applicant is requesting an amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre). This amendment will not result in any detrimental effects within the village or the neighborhood. The amendment will allow for the demolition of an underperforming building, orderly redevelopment of the site providing a positive tax generating use for the village, school districts and other taxing bodies.

(2) CONDITIONAL USE PERMIT STANDARDS

Pursuant to Section 10-3-14(G) of the DCO, the following Standards need to be satisfied in order for the Village Board to approve the Conditional Use Permit establishing the Planned Development.

1. **That the establishment, maintenance, or operation of the conditional use will not be detrimental to, or endanger the public health, safety, morals, comfort, or general welfare.**

The granting of the conditional use permit to allow for a R4 – Multi-Family Residence District Planned Development on a site less than 5 acres will not be detrimental to or, endanger the public health, safety, morals, comfort or general welfare or injurious to other nearby property or improvements. The proposed conditional use permit will allow for the development of a well-designed townhome development that reduces current impervious services and provides storm management facilities which results in downstream benefits. According to

a traffic study prepared by KLOA, no significant negative impacts on the surrounding road network would result from the development. Given the foregoing, granting the conditional use permit will not be detrimental to the public welfare or injurious to other property or improvements in the neighborhood in which the property is located.

2. **That the conditional use will not be injurious to the uses and enjoyment of other property in the immediate vicinity for the purposes already permitted, nor substantially diminish and impair property values within the neighborhood in which it is to be located.**

The proposed conditional use will allow a well-designed townhome development that minimizes impact on natural areas and is well separated from existing development with the use of landscaping fencing and setbacks. Setbacks within the development allow adequate light and air while preserving views across the site. Density is consistent with surrounding multi-family developments and according to a traffic study prepared by KLOA, no substantial impact on the surrounding street system is anticipated. Site engineering is designed to reduced impervious surfaces, preserve natural topography and existing drainage patterns and enhance the stormwater management facilities on-site so as to provide marginal improvements to the overall area.

As represented in the applicant's materials, a fiscal analysis indicates a positive impact on property values and real estate taxes. Given the foregoing, the proposed conditional use permit will not impair an adequate supply of light and air to adjacent property or substantially increase the congestion of the public streets, or increase the danger of fire, or impair natural drainage or create drainage problems on adjacent properties, or endanger the public safety, or substantially diminish or impair property values within the neighborhood.

3. **That the establishment of the conditional use will not impede the normal and orderly development and improvement of the surrounding property for uses permitted in the district.**

The subject property is in an immediate area dominated by commercial development, multi-story attached single family, attached single family and detached single-family residential development. The anticipated density of the proposed development is consistent with the requested comprehensive plan amendment and is appropriate in light of the intensity of the surrounding uses and the local roadway system.

Given the foregoing, the proposed development will not impede the normal and orderly development of surrounding property but will in fact be complimentary to existing and future uses.

Those adequate public utilities, access roads, drainage and/or necessary facilities have been or will be provided.

There is an adequate supply of public utilities in the vicinity of the property. The property can be served easily by public sewer and public water. The development will cause no substantial impact on the surrounding street system. Site

engineering is designed to reduced impervious surfaces, preserve natural topography and existing drainage patterns and enhance the stormwater management facilities on-site so to provide marginal improvements to the overall area.

4. **That adequate measures have been or will be taken to provide ingress and egress so designed as to minimize traffic congestion in the public streets.**

The property will have two access points with one at Park Place west of Wolf Road and a second, controlled access via the existing terminus of Heritage Court to the north of the site. The current access to Wolf Road is being eliminated due to a conflict with the current deceleration lane approach to Park Place, conflicts with entrance spacing between the condominium development and Park Place and the county highway department's preference to eliminate curb cuts along minor arterial roadways such as Wolf Road. The access to Park Place has been engineered in such a way to lessen the impact on the current property owners along the south side of Park Place.

The controlled access point to the north will be improved with four-foot heigh decorative aluminum operable gate. The gate will prevent cut through traffic from eastbound 55th Street to southbound Wolf Road. Gate access will be granted solely to the current fourteen residents along Heritage Court and the prospective twenty-nine residents of this proposed development. Emergency services will also be granted access to the gate.

According to a traffic study prepared by KLOA, no substantial impact on the surrounding street system is anticipated.

5. **That the proposed conditional use is not contrary to the objectives of the current comprehensive plan for the Village of Western Springs.**

The applicant is requesting an amendment to the Comprehensive Land Use Plan of the Village of Western Springs, Illinois Adopted February 24, 2003 from Office to Multiple Family (9-18 Density Units/ Acre). However, the proposed amendment and the proposed plan do meet the goals set forth in the of the Comprehensive Land Use Plan for residential areas. The proposal enhances and protects the overall single family residential feel of the village. The product provides variety in housing types available in the village to entice new residents to the village and also allow for long-term residents to remain in the community. The proposal is compatible with the commercial and multi-family uses to the north and provides for an orderly transition to the south and west.

6. **That the conditional use shall, in all other respects, conform to the applicable regulations of the district in which it is located, except as such regulations may, in each instance, be modified pursuant to the recommendations of the plan commission and approved by the village board.**

The proposed development will conform with the R4 – Multi-Family Residence District except for the requested deviations requested for approval by the Village Board.

(3) ADDITIONAL SUBMITTAL REQUIREMENTS

Pursuant to DCO 10-8-8, the Applicant would like to specifically address the following submittal requirements.

3. Project Design Features:

a. A detailed site plan has been provided illustrating street and pedestrian ways, typical building layouts, setbacks building heights, open spaces and site data

b. Final engineering plans are provided with complete topographical information and stormwater calculations

c. Final engineering plans are provided indicating the feasibility of providing utility service to the site via water mains, sanitary, and storm sewers and storm water detention facilities.

d. Final landscape plans are provided depicting project signage. Project marketing signage has not been developed as of this submittal. Any public facing signage shall be submitted for review to village staff for comment and approval.

e. Final landscape plans are provided indicating the location, number and desired effect of proposed landscaping.

f. Character elevations are provided along with floor plans and exterior color pallets

g. Final engineering plans are provided indicating street lighting

h. Final engineering plans are provided including a sediment and erosion control plan indicating methods to control erosion and sedimentation on and adjacent to the site.

4. Other Requirements: Applications for planned developments shall also include the submission of the following:

a. Fiscal impact study has been provided by the applicant illustrating the impact of the development on the Village of Western Springs and School Districts 106 & 204

b. Fiscal impact study has been provided by the applicant illustrating the impact of the development on the school districts from a fiscal and population standpoint

c. Traffic impact study has been provided by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA)

d. The applicant has provided comparable sales research and a letter from a local real estate professional in lieu of a full market study report.

e. Final engineering plans are provided indicating how construction activity will be controlled by addressing contractor ingress/egress, construction parking, street cleaning and pest control.

f. The applicant has a forty-year track record of custom development and construction will provide financial references upon request.

g. Proposed covenants are provided.

i. The applicant is a contract purchaser of the property and has included a letter from the owner authorizing the applicant to make this application.

j. Notification list for public hearing to be provided by the village.

k. Development schedule.
- Application submittal 5/10/2024
- Community meeting 6/5/2024
- Plan Commission meeting 6/19/2024
- Planning and Zoning Committee Meeting 7/2/2024
- Village Board Workshop / Village Board Meeting 7/22/2024
- Site demolition 8/19/2024
- Site grading and underground utilities 9/2/2024
- Start construction on model building 9/16/2024
- Site pavement 9/30/2024
- Model grand opening 3/1/2025

l. Final engineering plans are provided with this submittal, which complies with of all applicable plans and materials required in Chapter 11 of this Ordinance, "Flood Plain and Storm Water Management".

DEVELOPER/BUILER & PROJECT TEAM INFORMATION

McNaughton Development LLC is a custom home builder and land development company that builds architecturally exciting high-end, distinctive homes. It has extensive experience in the construction of high-end residential product. It has developed numerous properties from one to three hundred acres. McNaughton Development is a family owned and operated company that is deeply rooted in Chicagoland area since 1981 and believes that a custom home is the product of the customers ideas and dreams and our commitment to making it a reality.

DesignTek Engineering has been an established civil engineering design and consulting firm servicing the Chicagoland region, surrounding suburbs, and northwest Indiana for over 20 years. Founded in 2003, DesignTek has expanded its services and client base by providing personalized attention to the needs and expectations of their clients. Their team of professional engineers, surveyors, and support staff tackle a wide variety of diverse projects in all fields of land development including residential, commercial, industrial, institutional, and municipal projects.

BSB Design, founded in 1966 by Jack Bloodgood, began as a one-man shop operating out of a barn in Des Moines, Iowa. Today, it has grown into a renowned architectural and design firm,

making an impact on much more than just the single-family home market. With offices coast to coast, they offer national experience with regional sensitivity. As a preeminent design firm, it has leveraged its unique abilities to see the future more clearly and to create environments that transform lives.

Kenig, Lindgren, O'Hara, Aboona, Inc. was formed in 1995 by Neil Kenig, Gerald Lindgren, Donald O'Hara and Luay Aboona. Today, Luay Aboona continues with his partner Michael Werthmann to lead the firm in providing quality traffic, transportation, and parking consulting services to its clients. KLOA, Inc.'s staff of transportation engineers and planners represent over 150 years of professional experience. Their high standards, commitment to the industry, and concern for each client assure the KLOA, Inc. mission to provide superior service in a timely and cost-effective manner. They approach each project as a special assignment that requires critical analysis, detailed research, creative thinking, and communicative interaction to develop practical solutions.

VII. CONCLUSION

McNaughton Development LLC is pleased to submit this application and is confident, with the approval of the village board, that the development will be an excellent addition to the Village of Western Springs.

(UNLESS OTHERWISE SHOWN)

EASEMENT PROVISIONS

Easements are hereby reserved for and granted to the Village of Orland Park, Illinois and to those public utility companies operating under franchise from the Village of Orland Park, including, but not limited to Ameritech, Northern Illinois Gas Company (NICOR), Commonwealth Edison Company, Cable Television and their successors and assigns, over all the areas marked "Public Utilities and Drainage Easement" (P.U. & D.E.) on the plat for the perpetual right, privilege and authority to construct, reconstruct, repair, inspect, maintain and operate various utility transmission and distribution systems, community antenna television systems and including storm and/or sanitary sewers, together with any and all necessary manholes, catch basins, connections, appliances and other structures and appurtenances as may be deemed necessary by said village, over, upon, along, under and through said indicated easements, together with right of access across the property for necessary men and equipment to do any of the above work.

No right is also granted to trim or remove fences, trees, shrubs or other plants on the easements that interfere with the operation of the sewers or other utilities. No permanent buildings shall be placed on said easements, but same may be used for gardens, shrubs, landscaping and other purposes that do not harm or later interfere with the aforesaid uses or rights, where an easement is used both for sewers and other utilities, the other utility installation shall be subject to the ordinances of the Village of Orland Park.

Easements are hereby reserved for and granted to the Village of Orland Park and other governmental authorities having jurisdiction of the land platted hereby over the entire easement area for ingress, egress and the performance of municipal and other governmental services, including water, storm, and sanitary sewer services and maintenance.

NICOR GAS COMPANY

AN EASEMENT IS HEREBY RESERVED FOR AND GRANTED TO NORTHERN ILLINOIS GAS COMPANY, ITS SUCCESSORS AND ASSIGNS ("NI-GAS") TO INSTALL, OPERATE, MAINTAIN, REPAIR, REPLACE AND REMOVE FACILITIES USED IN CONNECTION WITH THE TRANSMISSION AND DISTRIBUTION OF NATURAL GAS IN, OVER, UNDER, ACROSS, ALONG AND UPON THE SURFACE OF THE PROPERTY SHOWN ON THIS PLAT MARKED "EASEMENT," "COMMON AREA OR AREAS" AND STREETS AND ALLEYS, WHETHER PUBLIC OR PRIVATE, AND THE PROPERTY DESIGNATED IN THE DECLARATION OF CONDOMINIUM AND/OR ON THIS PLAT AS "COMMON ELEMENTS," TOGETHER WITH THE RIGHT TO INSTALL REQUIRED SERVICE CONNECTIONS OVER OR UNDER THE SURFACE OF EACH LOT AND COMMON AREA OR AREAS TO SERVE IMPROVEMENTS THEREON, ON OR ADJACENT LOTS, AND COMMON AREA OR AREAS, AND TO SERVE OTHER PROPERTY, ADJACENT OR OTHERWISE, AND THE RIGHT TO REMOVE OBSTRUCTIONS, INCLUDING BUT NOT LIMITED TO, TREES, BUSHES, ROOTS AND FENCES, AS MAY BE REASONABLY REQUIRED INCIDENT TO THE RIGHTS HEREIN GIVEN, AND THE RIGHT TO ENTER UPON THE PROPERTY FOR ALL SUCH PURPOSES. OBSTRUCTIONS SHALL NOT BE PLACED OVER NI-GAS' FACILITIES OR IN, UPON OR OVER THE PROPERTY IDENTIFIED ON THIS PLAT FOR UTILITY PURPOSES WITHOUT THE PRIOR WRITTEN CONSENT OF NICOR. AFTER INSTALLATION OF ANY SUCH FACILITIES, THE GRADE OF THE PROPERTY SHALL NOT BE ALTERED IN A MANNER SO AS TO INTERFERE WITH THE PROPER OPERATION AND MAINTENANCE THEREOF.

THE TERM "COMMON ELEMENTS" SHALL HAVE THAT MEANING SET FORTH FOR SUCH TERM IN SECTION 605/2(e) OF THE "CONDOMINIUM PROPERTY ACT" (ILLINOIS COMPILED STATUTES, CH. 765, SEC. 605/1(e)), AS AMENDED FROM TIME TO TIME, THE TERM "COMMON AREA OR AREAS" IS DEFINED AS A LOT, PARCEL OR AREA OF REAL PROPERTY, INCLUDING REAL PROPERTY SURFACED WITH INTERIOR DRIVEWAYS AND WALKWAYS, THE BENEFICIAL USE AND ENJOYMENT OF WHICH IS RESERVED IN WHOLE AS AN APPURTENANCE TO THE SEPARATELY OWNED LOTS, PARCELS OR AREAS WITHIN THE PROPERTY, EVEN THOUGH SUCH AREAS MAY BE DESIGNED ON THIS PLAT BY OTHER TERMS.

1. ALL AREAS ARE PLUS OR MINUS.
2. ALL EASEMENTS ARE HEREBY GRANTED.
3. ALL DISTANCE ARE IN FEET AND DECIMAL PARTS THEREOF.
4. THERE SHALL BE NO INGRESS OR EGRESS FROM OUTLOT "A" TO SOUTHWEST HIGHWAY.

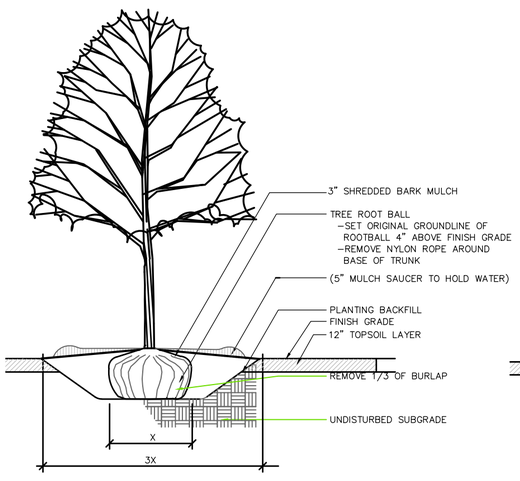
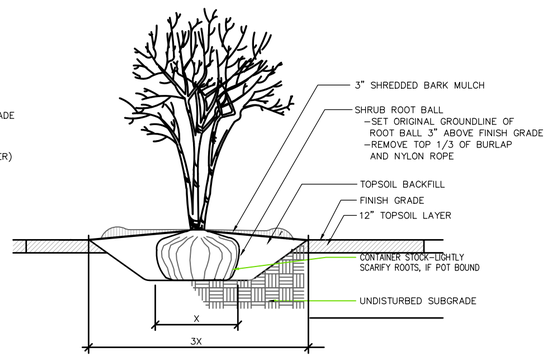
SLOPE INSTALLATION
APLICACIONES PARA TALUDES

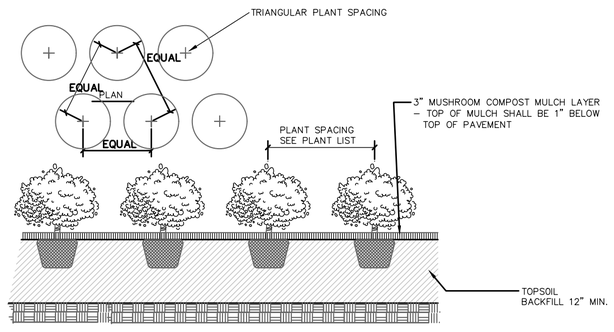
NORTH AMERICAN GREEN
EROSION CONTROL *Products* *Guaranteed* SOLUTIONS

14649 HIGHWAY 41 NORTH
EVANSVILLE, IN 47725
800-772-2040
www.nagreen.com





1. PREPARE SOIL BEFORE INSTALLING ROLLED EROSION CONTROL PRODUCTS (RECP's), INCLUDING ANY NECESSARY APPLICATION OF LIME, FERTILIZER, AND SEED.
   NOTE: WHEN USING CELL-O-SEED DO NOT SEED PREPARED AREA. CELL-O-SEED MUST BE INSTALLED WITH PAPER SIDE DOWN.
2. BEGIN AT THE TOP OF THE SLOPE BY ANCHORING THE RECP's IN A 6" (15 CM) DEEP X 6" (15 CM) WIDE TRENCH WITH APPROXIMATELY 12" (30cm) OF RECP's EXTENDED BEYOND THE UP-SLOPE PORTION OF THE TRENCH. ANCHOR THE RECP's WITH A ROW OF STAPLES/STAKES APPROXIMATELY 12" (30 CM) APART IN THE BOTTOM OF THE TRENCH. BACKFILL AND COMPACT THE TRENCH AFTER STAPLING. APPLY SEED TO COMPACTED SOIL AND FOLD REMAINING 12" (30 CM) PORTION OF RECP's BACK OVER SEED AND COMPACTED SOIL. SECURE RECP's OVER COMPACTED SOIL WITH A ROW OF STAPLES/STAKES SPACED APPROXIMATELY 12" (30 CM) APART ACROSS THE WIDTH OF THE RECP's.
3. ROLL THE RECP's (A.) DOWN OR (B.) HORIZONTALLY ACROSS THE SLOPE. RECP's WILL UNROLL WITH APPROPRIATE SIDE AGAINST THE SOIL SURFACE. ALL RECP's MUST BE SECURELY FASTENED TO SOIL SURFACE BY PLACING STAPLES/STAKES IN APPROPRIATE LOCATIONS AS SHOWN IN THE STAPLE PATTERN GUIDE. WHEN USING THE DOT SYSTEM™, STAPLES/STAKES SHOULD BE PLACED THROUGH EACH OF THE COLORED DOTS CORRESPONDING TO THE APPROPRIATE STAPLE PATTERN.
4. THE EDGES OF PARALLEL RECP's MUST BE STAPLED WITH APPROXIMATELY 2" – 5" (5 CM – 12.5 CM) OVERLAP DEPENDING ON RECP's TYPE.
5. CONSECUTIVE RECP's SPLICED DOWN THE SLOPE MUST BE PLACED END OVER END (SHINGLE STYLE) WITH AN APPROXIMATE 3" (7.5 CM) OVERLAP. STAPLE THROUGH OVERLAPPED AREA, APPROXIMATELY 12" (30 CM) APART ACROSS ENTIRE RECP's WIDTH.
   NOTE:
   *IN LOOSE SOIL CONDITIONS, THE USE OF STAPLE OR STAKE LENGTHS GREATER THAN 6" (15 CM) MAY BE NECESSARY TO PROPERLY SECURE THE RECP's.



1. PREPARE EL TERRENO ANTES DE INSTALAR LAS MANTAS, INCLUYENDO LA APLICACION DE CAL, FERTILIZANTE Y SEMILLA.
   NOTA: CUANDO ESTE USANDO CELL-O-SEED NO SIEMBRE EL AREA PREPARADA. CELL-O-SEED TIENE QUE INSTALARSE CON EL LADO DE PAPEL HACIA ABAJO.
2. COMIENCE EN LA CABECERA DEL TALUD SUJETANDO LA MANTA EN UNA ZANJA DE 6" (15 CM) DE PROFUNDIDAD FOR 6" (15 CM) DE ANCHO CON APROXIMADAMENTE 12" (30 CM) DE LA MANTA EXTENDIDA MAS ALLA DE LA PENDIENTE ALTA DE LA ZANJA. SUJETE LA MANTA AL FONDO DE LA ZANJA CON UNA LINEA DE GRAPAS O ESTACAS APROXIMADAMENTE 12" (30 CM) UNA DE LA OTRA. RELLENE Y COMPACTE LA ZANJA DESPUES DEL ENGRAPE. RIEGE LA SEMILLA EN EL SUELO COMPACTADO Y DOBLE LAS 12" (30 CM) REMANENTES DE MANTA SOBRE LA SEMILLA EL SUELO COMPACTADO. ASEGURE LA MANTA SOBRE EL SUELO CON UNA LINEA DE GRAPAS O ESTACAS APROXIMADAMENTE 12" (30 CM) UNA DE LA OTRA A TRAVES DEL ANCHO DE LA MANTA.
3. DESENROLLE LAS MANTAS (3A) HACIA ABAJO U (3B) HORIZONTALMENTE A TRAVES DEL TALUD CON EL LADO APROPIADO HACIA LA SUPERFICIE DEL SUELO. TODAS LAS MANTAS DEBERAN ASEGURARSE A LA SUPERFICIE DEL SUELO POR MEDIO DE GRAPAS O ESTACAS EN LUGARES APROPIADOS TAL Y COMO SE INDICA EN EL PATRON GUIA DE ENGRAPADO. CUANDO ESTE USANDO EL DOT SYSTEM™, LAS GRAPAS O ESTACAS DEBEN COLOCARSE A TRAVES DE CADU UNDO DE LOS PUNTOS CON COLOR CORRESPONDIENTES AL PATRON DE ENGRAPADO APROPIADO.
4. LOS BORDES DE LAS MANTAS PARALELAS TIENEN QUE ENGRAPARSE CON UN TRASLAPE DE APROXIMADAMENTE 2" – 5" (5 CM – 12.5 CM) DEPENDIENDO DEL TIPO DE MANTA.
5. MANTAS CONSECUTIVAS UNIDAS EN LA BAJADA DE LOS TALUDES, DEBEN COLOCARSE ORILLA SOBRE ORILLA (TIPO ESCALONADO) CON UN TRASLAPE DE APROXIMADAMENTE 3" (7.5 CM). ENGRAPE EL AREA TRASLAPADA CON UNA SEPARACION DE APROXIMADAMENTE 12" (30 CM) A TRAVES DE TODO EL ANCHO DE LA MANTA.

   NOTA:
   * EN CONDICIONES DE SUELTO, PUEDE QUE SE NECESITEN GRAPAS O ESTACAS DE MAS DE 6" (15 CM) DE LARGO PARA ASEGURAR LAS MANTAS CORRECTAMENTE.

REV. 01/05

LANDSCAPE SPECIFICATIONS

1.11 GENERAL LANDSCAPE NOTES

A. Unless stated otherwise herein, all seeding, sodding and landscape planting work shall be performed in accordance with the Iowa Department of Transportation (IDOT) Standard Specifications for Highway and Bridge Construction (latest edition) as specified in Section 200 (Earthwork, Landscaping and Erosion Control).

B. Unless stated herein, all materials shall meet the requirements of the following Articles of Standard the Iowa DOT Specifications for Road and Bridge Construction Section 1000 – Materials:

Item	Section
Erosion Control	2601
Furnish Install Trees Shrubs/Warranty	2611
Erosion Control Materials	4169
Landscape Plant Materials	4170

1.12 TOPSOIL/FINE GRADING

A. Approved topsoil shall be supplied and installed at the following depths:
Seeded and sodded areas – 8-12" depth
Shrub bed areas and landscaped islands – 12" depth
Groundcover/perennial areas – 12" depth (amended soil mix as shown in detail)

B. Approved topsoil shall be free of roots, noxious weed seeds, sticks, rocks or miscellaneous debris which may impair plant growth. Topsoil shall not be worked or graded while frozen or in an excessively wet or dry condition. Topsoil shall not be accessibly acidic or alkaline and shall not contain any herbicide residue. The Owner reserves the right to have representative samples of the topsoil tested by a qualified soil testing laboratory at no cost to the Owner.

C. All top-soiled areas shall be fine graded to elevations indicated on the grading plan prior to receiving sod or landscaping. All areas shall drain properly so that there are no puddles or standing water in any lawn or plant bed areas. Areas improperly graded shall be regarded at the Contractor's expense.

D. Remove rocks, stones and other foreign debris while spreading and grading. If necessary, had spread topsoil around buildings, structures, walks, drives or trees to avoid damage.

E. Where graded areas interface with non-graded undisturbed edges, remove turf along edge to create a straight smooth transition line between graded and non-graded areas. Fine grade transition area so that finis grades of graded and non graded areas are flush.

1.13 SEEDING/SODDING

A. Seeding work shall conform to Section 4169 of the IDOT Standard Specifications for Highway and Bridge Construction.

B. Seed mix for seeded turf grass areas shall be the following:

1. Type A Seed Mix (General Lawn Area). Field of Dreams Reseeder Seed Mix- Blend

25% Accent Perennial Ryegrass
25% Caddieshack Perennial Ryegrass
25% Blue Chip Kentucky Bluegrass
25% Freedom III Kentucky Bluegrass

Apply at the rate of five pounds per 1,000 SF. Supplier- National Seed Company,4720 Yender Avenue, Lisle, Illinois (630) 417-9055

C. Prior to work, submit three copies of seed vendor's certificate for grass seed mixture, indicating weight, and percentages of purity, germination and weed seed.

D. Sodding work, if provided, shall conform to Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

E. Prior to work, submit three copies of sod grower's location for approval. Sod shall be from a locally grown source. Sod shall be in healthy growing condition, free of weeds, pests and cut to the specified thickness. The Owner has the right to reject unacceptable sod at the growing site.

F. All fine grading for seeded and sodded areas shall be approved by the Owner prior to work.

G. Install seeding on prepared, finished graded areas and in favorable weather conditions within the following periods: April 1st through May 31st; and August 15th through October 15th.

H. Install sodded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

I. Fertilize seeded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction. Fertilizer shall be a 10-10-10 Max Lawn mix (or Equal) and applied to 14.4 pounds per 1,000 square feet.

J. Fertilize sodded areas per Section 2601 of the IDOT Standard Specifications for Highway and Bridge Construction.

K. Apply seed blanket to all lawn seeded areas per the details indicated on the drawings.

L. Guarantee all seeding and sodding work for a period of one year following final acceptance. Areas not accepted upon completion of the guarantee period shall be resodded to fill in voids and areas not covered in seed or sod.

M. Maintain seeded and sodded areas for a period of 45 days following installation. Maintenance shall consist of watering, mowing and weeding. Repair and reseed bare spots or seeded and sodded areas that have not established or have washed out due to erosion.

N. Initial mowing shall be done at a 3" cutting height so than not more than 33% of the grass is removed in a single mowing. Cutting heights on follow up mowings can be readjusted to a 2.5" grass blade height.

1.14 TREE, SHRUB AND GROUNDCOVER PLANTING

A. The Owner reserves the right to inspect all material at the nursery. Only nursery grown stock will be permitted to be used on the Project.

B. All tree, shrub and groundcover planting shall be performed between the dates of March 15 and May 31, and August 15 and October 15. Actual planting shall be performed only during periods within this season when weather and soil conditions are suitable and in accordance with locally accepted practice, as approved by the Owner's Representative.

A. Location for all trees, intermediate trees and evergreen trees shall be staked and outlines of bed areas shall be clearly marked on the ground by a qualified landscape representative of the Contractor, and shall be subject to approval by the Owner's Representative prior to commencement of planting.

B. All shrub beds shall be mulched with 3" of shredded hardwood bark mulch. Groundcover beds shall be mulched with 2" of mushroom compost. Provide shredded hardwood bark mulch rings (3" depth) for all shade and flowering trees. Diameter of mulch rings shall be equal to diameter of root ball.

C. Mulch shall comprise partially decomposed shred hardwood bark. Mulch shall be a brown-black color, and, free of oversized pieces (1/2" x4") and fine particles. Prior to work, Contractor shall submit three mulch samples for approval for use prior to work.

D. Imported topsoil, if necessary, shall consist of fertile, friable natural topsoil typical for this locality. It shall not contain a mixture of subsoil or slag and free of lumps, stones, plants and their roots, stalks and other extraneous matter and shall not be used while in a frozen or muddy condition. Topsoil shall have a pH range of 6.0-7.0 and shall not contain less than 12 percent organic matter.

E. Tree, Shrub and Groundcover Establishment Period, Inspections and Guarantees.

1. Establishment Period. For a period of 60 days after planting of trees, shrubs, and groundcovers, (not including dormancy periods), the Contractor shall properly care for all plants, and planning beds including watering, weeding fertilizing, cultivating, adjusting or bracings or other maintenance work which is necessary to keep the plants in a healthy condition and in a plumb position. All plants shall be watered as season conditions require, and as directed by the Owner, until provisional acceptance of the planting.

2. Provisional Acceptance. At the end of the Establishment period, the planting shall be inspected by the Owner for provisional acceptance of the planting. Any plant material which is dead, damaged, untrue to natural form of the species, or otherwise unhealthy, shall be replaced by the Contractor at his expense. The Owner shall accept maintenance responsibilities of the planting after the provisional acceptance.

3. Guarantee and Final Acceptance. The Contractor shall guarantee that all plants shall be in a healthy and vigorous condition one full growing season after the provisional acceptance. The planting shall be inspected by the Owner at the end of the guarantee period. Any plant material which is dead, damaged, untrue to natural for of the species, or otherwise unhealthy, shall be replaced by the Contractor at his expense.

4. Provisional acceptance and guaranteed periods of landscaped plantings may be in part or whole.
NATIVE PLANTING SPECIFICATIONS

2.0 PURPOSE

These specifications, and the plan drawing, detail the standards and procedures required to successfully establish native plant communities within and adjacent to the on-site stormwater detention basin (SDB). Upon successful establishment, the native vegetation will provide water quality benefits to the surrounding area by filtering sediments and pollutants from stormwater runoff generated on-site. Additionally, the floral diversity created by these plantings will provide a valuable source of wildlife habitat, as well as a unique and aesthetically pleasing landscape.

2.01 CONTRACTOR QUALIFICATIONS

The Native Landscape Contractor chosen for the establishment and enhancement of the natural areas must be experienced in the restoration, installation, and management of said areas. They must have a minimum of five years experience in the field. There shall be a supervisor available at all times that can identify non-native and native plants by genus and species. The goal of installing successful native plant communities is a long-term process. Therefore, it is imperative that a qualified Native Landscape Contractor perform the initial installation and maintenance.

2.02 QUALITY AND CONDITION

1. Native seed shall be obtained from sources east of the Mississippi River, within the same EPA Level III Ecoregion as the project site (Central Corn Belt Plains). Plant origins outside of the Ecoregion shall be approved by the Wetland Consultant.

2. Native seeds shall be blended by the vendor, and the mixture and ratio shall be guaranteed in writing to be as specified. The amount of seed indicated on the specifications shall mean the total amount of pure live seed (PLS) per acre for all species listed. It is the sole responsibility of the Native Landscape Contractor to provide approved seed that meets industry-standard PLS requirements.

3. Native Landscape Contractor shall provide the Wetland Consultant with the name and location of the seed supplier, origin of the various kinds of plants, and a statement of the purity of the seed.

4. Seed shall conform to applicable State and Federal regulations as in effect on the date of letting. Unless otherwise specified, seed shall not contain in excess of 1 percent weed seeds; 0 percent is desirable.

5. All storage requirements, stratification, and scarification considerations shall be the sole responsibility of the Native Landscape Contractor.

6. Mycorrhizal inoculants shall be palletized and mixed at 1 lb. per acre with the fine seeds before installation. The inoculants shall contain a diverse mixture of Glomales fungal species (Glomus spp.) in palletized form.

2.03 HANDLING

1. Native Landscape Contractor shall be solely responsible for the proper handling and storage of the seed according to the best seed handling and storage practices, including fungicide treatments and stratification considerations. Owner shall make no compensation for damage to the seed because of improper storage, cleaning, threshing, or screening operations.

2. All native seeds shall be packed and covered in such a manner as to ensure adequate protection against damage and maintain dormancy while in transit, storage, or during planting operations.

3. Seed shall be kept dry and unopened until needed for use. Seed shall not be stored or temporarily stored in locations or vehicles where the temperature will be in excess of 90 degrees F.

Table 4. Erosion Control Blanket Details
See Plans

2.04 SITE PREPARATION

1. The General Contractor and Native Landscape Contractor shall be responsible for performing all work necessary to achieve and maintain an acceptable seedbed prior to seeding. All areas must be properly prepared before seeding begins. Underground utility location maps and plans should be reviewed prior to work. Equipment having low unit pressure ground contact shall be utilized within the planting areas.

2. Unless the Landscape Architect agrees to another approach, the seedbed shall be prepared by working the topsoil to a depth of 3 inches. Site preparation equipment shall be of a design that can be utilized efficiently by the Native Landscape Contractor to meet the requirements for the work specified. The equipment proposed for use by the Native Landscape Contractor for disking and herbicide applications shall be subject to approval by the Landscape Architect.

3. Prior to seeding, at least 6 inches of topsoil shall be present and free of all clods, stones, roots, sticks, rivulets, gullies, crusting, and cracking. The soil aggregate size will be no greater than 2 inches in the largest diameter.

4. If present, compacted soils shall be disked or raked prior to seeding. Remedial measures for the access area may, at the direction of the Wetland Consultant, involve ripping from 12 to 18 inches of the soil horizon prior to disking. If compaction is not a concern and the seedbed needs to be loosened prior to seeding to ensure good seed-soil contact, disking or raking shall be performed using equipment and the approach recommended by the Native Landscape Contractor, subject to approval by the Wetland Consultant.

5. If needed, cultivation shall occur within 24 hours prior to seeding. Seeding should occur immediately after the last cultivation preferably before a rain.

FIRE STROBE 2OOO

EMERGENCY VEHICLE STROBE DETECTOR

The FIRE STROBE 2OOO provides rapid access to automatic gates and secured areas. The FIRE STROBE 2OOO opens gates when activated by an emergency vehicle equipped with the standard operational strobe. The most common frequency is (14Hz).

Now with STROBEWATCH™.

FEATURES:

RAPID DETECTION OF ANY EMERGENCY STROBE

- Fire
- Paramedics
- Police
- 911 Response Vehicles
- Double and Quad Flash Strobes
- 100% Digital

FIELD PROGRAMMABLE

- Coated Optics
- 2 Relay Outputs
- Relay Timing

EASE OF INSTALLATION

- FIRE STROBE 2OOO can be installed on any existing gate system
- Sensitive photodiode complete with PVC housing and lens assembly can be mounted in a variety of ways
- FIRE STROBE 2OOO is designed to accommodate AC or DC operation
- Units are provided with a 12 VAC plug in transformer

MANUFACTURED BY:
ACCESS PRODUCTS, INC.
(858) 292-1561 FAX (858) 292-6955
www.firestrobe.com

DISTRIBUTED BY:

FIRE STROBE 2OOO Technical Specifications

BASIC CONCEPT

The FIRE STROBE 2OOO signal is received optically by line of sight. The range varies with the ambient light and intensity of the strobe emitter. A typical range varies from 150 feet to 500 feet. The detector will not allow false operation with unwanted signals from radio interference and/or flashing headlights or loud sounds.

The acquisition time from the emitter light source to the discriminate module is approximately .5 seconds.

The FIRE STROBE 2OOO is widely used for security /electric gate access. It can be used for firehouse garage doors and other related access needed by emergency vehicles. This emergency-vehicle strobe detector provides rapid access to any gated community that has been serviced by fire and emergency equipment from the OPTICOM* STROBE SYSTEM.

INSTALLATION & TESTING

Complete installation instructions are provided with the FIRE STROBE 2OOO for simple hook-up of the unit to interface with your gate or access control. Two dry contacts are also provided for bi-directional operation where needed

The photoeye assembly is typically mounted 8 feet to 10 feet above the street level and is aimed for optimal strobe signal. (A total of (2) photoeye assemblies may be used). A 12 VAC power supply is provided with the FIRE STROBE 2OOO system.

Testing can be accomplished with the optional fire strobe transmitter tester. This FIRE STROBE 2OOO transmitter will enable a throughput of signals from the photoeye assembly to the relay output. This is a hand-held transmitter which operates via 9-volt battery.

TECHNICAL SPECIFICATIONS

1. Frequency 14.035 Hz+/- .25 Hz for class II signals. For OPTICOM* emitters, double, quad flash strobes 140-170 fpm. 100 % digital.
2. The FIRE STROBE 2OOO is fully compatible with the OPTICOM* priority control emitter.
3. Now with Strobewatch™ programmable for double and quad flash, vehicle mounted strobes. These are usually found on police and other emergency vehicles.
4. The strobe acquisition time is .5 seconds.
5. The PC board construction is mounted in the enclosed 8" x 8" x 4" rain-tight NEMA J-Box.
6. The weight is approximately seven pounds.
7. The power requirements are 12/24 volts AC/DC non-polarity conscious, approximately 1 watt draw.

WARRANTY

The FIRE STROBE 2OOO has a one year warranty when used according to the manufacturer's specifications. This warranty does not apply when the FIRE STROBE 2OOO has been abused, over voltaged, or altered in any way, The warranty coverage is at the sole discretion of the manufacturer. This unit is to be used only for the operations described above.

REVIEW SET
NOT FOR CONSTRUCTION

SURFACE WATER DRAINAGE CERTIFICATE

STATE OF ILLINOIS)
COUNTY OF WILL)

TO THE BEST OF OUR KNOWLEDGE AND BELIEF THE DRAINAGE OF SURFACE WATERS WILL NOT BE CHANGED BY THE CONSTRUCTION OF THESE LOT IMPROVEMENTS OR ANY PART THEREOF, OR THAT IF SUCH SURFACE WATER DRAINAGE WILL BE CHANGED, REASONABLE PROVISIONS HAVE BEEN MADE FOR THE COLLECTION AND DIVERSION OF SUCH WATERS INTO PUBLIC AREAS OR DRAINS WHICH THE OWNER HAS A RIGHT TO USE, AND THAT SUCH SURFACE WATERS WILL BE PLANNED FOR IN ACCORDANCE WITH GENERALLY ACCEPTED ENGINEERING PRACTICES SO AS TO REDUCE THE LIKELIHOOD OF DAMAGE TO THE ADJOINING PROPERTIES BECAUSE OF THE CONSTRUCTION OF THESE LOT IMPROVEMENTS.

DATED 13TH DAY OF DECEMBER, 2024

COVER SHEET

EARTHWORK

1. Topsoil Excavation Includes:
   a. Excavation of topsoil and other structurally unsuitable materials within those areas that will require earth excavation or compacted earth fill material, in order to achieve the plan subgrade elevations. The amount of topsoil to be stripped shall be verified in the field by a soils engineer.
   b. Placement of the excavated material in OWNER designated areas for future use within areas to be landscaped, and those areas not requiring structural fill material.
   c. Compaction of the excavated material where placed in areas not requiring structural fill material, shall be moderate.
   d. Excess materials, if not utilized as fill or if not stockpiled for future landscaping, shall be completely removed from the construction site and disposed of by the CONTRACTOR.
2. Earth Excavation Includes:
   a. Excavation of earth and other materials which are suitable for use as structural fill. The excavation shall be to within a tolerance of 0.3 feet (+) of the plan subgrade elevations. The (+) tolerance within pavement areas shall be such that the earth material shall "balance" as part of the fine grading operation.
   b. Placement of the earth and other suitable materials shall be within those areas requiring structural fill in order to achieve the plan subgrade elevations to within a tolerance of 0.3 feet (+). The fill material shall be placed in loose lifts that shall not exceed eight (8) inches in thickness, and the water content shall be adjusted in order to achieve the required compaction. Earth material may be placed within those portions of the building site not requiring structural fill, to within four (4) inches of the plan finished grade elevation. In areas requiring structural fill, however, the earth material shall not be placed over topsoil or other unsuitable materials unless specifically directed by a Soils Engineer with the concurrence of the OWNER.
   c. Compaction of the earth and other suitable materials, shall be to at least 95% of the maximum dry density as determined by the Modified Proctor Test, ASTM D1557 laboratory procedure within proposed pavement areas and building areas, an rear yards abutting to the proposed lakes. Moderate compaction is required elsewhere. All fill shall be placed in 8" lifts, loose measure.
   d. Excess materials, if not utilized as fill, shall be completely removed from the construction site and disposed of by the CONTRACTOR.
3. Unsuitable Material
   a. Unsuitable material shall be considered as material which is not suitable for the support of pavement and building construction, and is encountered below normal topsoil depths and the proposed subgrade elevation. The decision to remove said material, and to what extent, shall be made by a Soils Engineer with the concurrence of the OWNER in writing.
4. General

   The Grading CONTRACTOR shall:
   a. Maintain proper site drainage at all times during the course of construction, and prevent storm water from running into or standing in excavated areas.
   b. Spread and compact uniformly to the degree specified all excess trench spoil after completion of the underground improvements.
   c. Scarify and compact to the degree specified the upper twelve (12) inches of the suitable subgrade material, in all areas that may be soft due to excess moisture content. This applies to cut areas as well as fill areas.
   d. Provide water to add to dry material in order to adjust the moisture content for the purpose of achieving the specified compaction.
5. Testing and Final Acceptance
   a. The CONTRACTOR shall provide as a minimum, a fully loaded tri-axle dumptruck or similar equipment for proof rolling the pavement subgrade prior to the placement of the curb and gutter and the base material. In addition, the pavement aggregate base course shall also be proof rolled. The Village Engineer shall be notified 48 hours in advance of any proof roll.
   b. Specific compaction testing may be required by the OWNER in selected fill areas. The CONTRACTOR shall bear the cost of any compaction testing which does not meet specification as well as the responsibility and cost for the necessary correction(s).
   c. Approval of the pavement subgrade by the OWNER shall be required prior to the placement of the pavement materials.
   d. The subgrade soil shall be tested by a professional geotechnical engineer at the developer's expense and shall have a minimum designated Illinois Bearing Ratio (IBR equal to three (3).
   e. A soil investigation report shall be provided to the Village to verify the in situ IBR value. Pavement structures with subgrade soil having an IBR value less than three (3) shall have an increased pavement structure as necessary to carry the design traffic loading.
6. Method of Measurement
   a. As-built measurements of earthwork for the purpose of payment shall not apply. the quantities shown in the engineer's "quantity estimate" shall be utilized unless said quantities are adjusted by mutual consent of the owner and contractor prior to the signing and acceptance of a contract.
   b. The quantities as shown in the engineer's "quantity estimate" are those estimated by the engineer and are provided solely for the convenience of the contractor. the contractor by choosing to utilize these quantities in the preparation of his "lump sum" bid, also accepts their accuracy. the contractor is therefore encouraged to make his own independent earthwork calculation, and to visit the site prior to the preparation of his bid.
   c. Prior to the removal of unsuitable material, the contractor shall notify the owner for authorization to remove said material, upon authorization and removal, the contractor shall request that the unsuitable material shall be field measured by the engineer in place.
7. Basis of payment
   a. Payment for all earthwork shall be "lump sum". the contractor shall provide unit prices for earthwork for the purpose of contract adjustment, if required.
   b. Payment for the removal of unsuitable material shall be based on the quantities as field measured by the engineer. the contractor shall provide as part of his bid a unit price per cubic yard for the removal of unsuitable material. said unit price shall include the complete removal of the material, replacement with a suitable material obtained by the contractor from a borrow source, and compaction to the required specification.

UNDERGROUND UTILITIES - GENERAL

1. The Underground CONTRACTOR Shall:
   a. Adhere to the criteria for the separation between water mains and sanitary sewers, storm sewers, combined sewers, sewer services and septic fields according to the requirements stated in the IEPA Rules for Public Water Supplies (the formal citation is Title 35, Subtitle F, Chapter II, Parts 651–654). All sewer water main separations shall be constructed per the "Standard Specifications for Water and Sewer Main Construction in Illinois".
   b. Be responsible to place on grade, and coordinate with other CONTRACTORS, all underground utility structure frames such as manholes, catch basins, and inlets.
   c. Be aware of potential conflicts with existing utilities. The CONTRACTOR shall excavate around the existing utilities to determine their exact location and elevation prior to the construction of the proposed utility improvements. Should unforeseen conflicts be found, the CONTRACTOR shall contact the ENGINEER prior to constructing the proposed improvements.
   d. Adjust or reconstruct any existing utility structure to the satisfaction of the utility owner. Adjustments and/or reconstructions not called for on the plans shall be considered incidental to the contract. No more than two adjusting rings within a min. of four inches (4") and a max. of twelve inches (12") of adjusting rings.
   e. Provide poured concrete fillets conforming to the shape of the pipe in all sanitary and storm manholes, and inlets.
   f. Be responsible for maintaining the top of any utility trench at least three (3) feet away from any existing or proposed curb or pavement, in those instances where the trench runs parallel to said curb or pavement.
   g. Be responsible for the dewatering of utility trenches during construction and providing the necessary trench bracing that may be required to assure safe working conditions.
   h. Remove soft material that may be encountered at the pipe invert elevation to a depth of at least one (1) ft. below the bottom of the pipe, and backfill with compacted bedding material.
   i. No damage to the road subgrade with excessive water saturation from hydrant flushing or from leaks in the water distribution system. The cost of repair for such damage shall be borne by the CONTRACTOR. Hoses should be used to direct the water from hydrant flushing into the storm sewer system (if available).
   j. Repair any existing field drainage tile damaged during construction, and properly reroute and/or connect said tile to the nearest storm sewer outlet. All locations of encountered field drainage tile shall be properly indicated on the CONTRACTOR'S record drawing.
   k. Furnish one (1) set of Record drawings to the ENGINEER upon completion of the sanitary sewers and water mains. Drawings (or table of locations) shall indicate the location of all sanitary sewer wyes (measured from the nearest downstream manhole), sewer stubs, water service along main and b-boxes. The CONTRACTOR shall also furnish linear distance along water main from appurtenances to appurtenance (valve vault to tee, tee to bend, etc.).
   l. Be responsible for implementation of the "Soil Erosion and Sedimentation Control Measures" as applicable.
   m. Maintain erosion control measures (straw bales and filter fabric) until grass is established.
2. Method of Measurement
   a. All sanitary sewer, storm sewer, and water main pipe shall be measured in the field after its installation. Payment shall be based on these field measurements.
   b. All appurtenances such as manholes, catchbasins, inlets, valves and valve vaults, valve boxes, and fire hydrants, shall be paid for on the basis of in–place quantities.
   c. Trench backfill material shall be measured by multiplying the as–constructed length of pipe (where applicable) by the average depth of the pipe by the "Payment Quantities per foot of Conduit" listed in Table 1, pg. 138 and "Typical Detail of Conduit Installation", pg. 137 of the Standard Specification for Sewer and Water in Illinois. If requested, the CONTRACTOR shall provide load tickets to the ENGINEER for verification of the trench backfill material delivered to the construction site. Load tickets for bedding material shall be submitted separately.
3. Basis of Payment
   a. All sanitary sewer, water main, and storm sewer pipe shall be paid for at the contract unit price per LINEAL FOOT. The price shall include the necessary labor and material for a complete in–place installation, as well as all incidental construction, testing, bedding material, and connections to existing utilities.
   b. All appurtenances for the underground improvements shall be paid for at the contract unit price EACH, said price to include the necessary labor and material for a complete in–place installation. The price for manholes, inlets, and catchbasins shall also include the frame and grate and all incidental construction. The price for fire hydrants shall also include a six (6) inch valve and box, and all incidental construction.
   c. Trench backfill material shall be paid for at the contract unit price per CUBIC YARD. Compaction must be made by mechanical methods.
4. As–Built Water & Sanitary Services
   a. As–built locations shall be provided for all water and sanitary sewer stubs. They shall also be stamped on the curb.
5. Structure Castings
   a. Frames and lids (or grates) for sanitary, watermain and storm sewer structures shall be as indicated on the plans, and the cost of same shall be integrated into the representative structure costs. Each structure lid shall be cast with text identifying the type of structure (storm, sanitary, water).
   b. Manhole castings shall be adjusted to finished grade using precast adjusting rings set on bitumastic material. All structures shall have no more than two adjusting rings w/ a min. of four inches (4") and a max. of twelve inches (12") of adjusting rings.
   c. All frames shall be set on a mastic bed with all gaps tuck pointed.
   d. All castings shall be made in the U.S.A. with U.S.A. materials.
6. Trench Backfill
   a. Bedding, haunching and the initial backfill shall consist of IDOT CA–7, CA–11 OR CA–19 aggregate. The initial backfill shall be placed to at least 12" above the pipe.
   b. Final backfill of the trench shall be accomplished by careful replacement of the excavated material. Any pipe installed under or within a 45 degree angle of repose (1:1) from the top of pipe to the edge of pavement, driveway (when driveway location is known) or curb and gutter shall be backfilled to the top of the trench with compacted IDOT CA–7, CA–11 or CA–19 material.
   c. Compaction shall be in achieved using 8" lifts (uncompacted) and mechanical compaction to 95% density. All costs for compaction and testing shall be paid for by the Developer or Contractor. Results shall be copied to the Village Engineer.

SANITARY SEWER

1. Material shall be:
   a. Green polyvinyl chloride pipe (PVC) SDR 26.
   b. PVC SDR 26 or D.I.P. CL 52.
   c. sewer pipe and fittings shall be in accordance with ASTM D–3034 for sizes 4"–15" (100–375 mm).
2. Joints shall be:
   a. for PVC; flexible elastomeric seal joints, ASTM D–3139, pressure joint.
   b. for DIP; rubber gasket joints, ANSI A21.11
3. Bedding shall be as detailed on the Engineering Plan.
4. Minimum size for mains shall be eight inches (8") and the minimum size for services shall be 6".
5. Wyes or Tees shall be provided on the new sanitary sewers for proposed building services.
6. "Band Seal" or similar couplings shall be used when joining pipes of dissimilar materials.
7. All sanitary structures shall have an external wrap, MAC or approved equal.
8. Polyethylene encasement shall be provided for all DIP sanitary sewer in accordance with AWWA latest standards.
9. Prior to pipe laying and jointing, the trench shall be sufficiently dewatered to maintain the water level in the trench at or below the base of the bedding. State / Federal permits, license agreements or other required approvals shall be obtained prior to dewatering.
10. Where separation from water main cannot be maintained as required per Illinois specifications, the sanitary sewer shall be mechanical joint PVC pressure pipe meeting C–900 or C–905.
11. Sewers shall be laid straight in both horizontal and vertical planes between manholes with a minimum cover of 4 feet.
12. Sanitary sewers shall be located a minimum of 10 feeet from any building and meet separation requirements of the Standard Specifications for Water and Sewer Main Construction in Illinois.
13. Services shall be a minimum 6 inches and extend to the property line or beyond any utility located in the front yard of a lot being served (single–family development), or to within five (5) feet from the face of a proposed building being served (multi–family and commercial development). The termination points shall be clearly located with a green–topped 4 inch x 4 inch stake extending a minimum 3 feet above final grade. The service lines shall be connected to the sewer using a wye at the 10:00 and 2:00 positions. Service lines not immediately connected to the building to be served shall be tightly plugged, using a plug provided by the pipe manufacturer for such use.
14. Testing and Final Acceptance
   a. Sanitary sewer mains and services shall be tested for exfiltration of air under pressure and deflection for flexible thermoplastic pipe in accordance with the Standard Specifications for Water and Sewer Construction in Illinois prior to their final acceptance. Allowable testing limits shall be as described in the "Standard Specifications" unless the local requirements are more restrictive. Service stubs must be properly plugged and sealed and clearly located at their termination points prior to testing. All sewer mains, service lines and manholes shall be clean and free of debris prior to their final acceptance. Sanitary Sewer shall be inspected and tested in accordance with the local jurisdictional requirements for television inspection and reviewed by the Village Engineer. Two copies of all test results shall be provided to the Municipality.
   b. Sanitary Manhole structures shall be tested, prior to acceptance, for watertightness by either of the following methods in conformance with the requirements specified: ASTM C 969: "Standard Practice for Infiltration and Exfiltration Acceptance Testing of Installed Precast Concrete Pipe Sewer Lines." OR ASTM C 1244: "Standard Test Method for Concrete Sewer Manholes by the Negative Pressure (Vacuum) Test."
   c. All public sanitary sewer extensions shall be internally video taped by remote camera. Tapes shall be in color using VHS or CD–ROM format and submitted with written reports to the Village Engineer for review and approval priot to acceptance of the sewer improvements by the Village.
   d. LaGrange Highlands will be the agency responsible for sewer main acceptance.

WATER MAIN

1. The Village of Western Springs is the agency responsible for the water main.
2. All installations shall conform to the requirements of the Standard Specifications for Water and Sewer Main Construction in Illinois.
3. Material for main pipe and fittings shall be class 52 ductile iron pipe with poly wrap for the public water main per AWWA C–151, with mechanical and push–on joints complying with AWWA C–111.
4. Material for the services shall be soft temper, Type K, copper water tubing, conforming to ASTM latest standard w/ compression fittings, unless otherwise noted on the plans.
5. Sizes for main & service lines shall be as indicated on the Engineering Plan.
6. Connections to Village water system shall be made under full water service pressure. Unless noted on plans and Village approval granted for shutdown. Shutdown requests need to be made to municipal services department 4 days prior to desired shutdown date. Contractor required to distribute shutdown notices to any impacted customers 2 business days prior. Village to provide notice text.
   a. Tapping sleeves shall include two piece bolted sleeve type with mechanical joints, Mueller–H615, or equal with joint accessories.
   b. Tapping valves shall include fully ported gate valves complying with AWWA C500 and mechanical joints type, Mueller–H667 or equal. Tapping valves shall be placed in precast concrete vaults.
7. The shut–off valve or curb stop for services shall be located as shown on the plans and shall be installed with a valve box of design approved by the Municipality. The termination point shall be clearly located with a blue–topped 4 inch x 4 inch stake extending a minimum of 3 feet above and below final grade.
8. Valves: Mueller, Clow or equal mechanical joint, resilient wedge seat, cast iron, bronze–mounted, O–ring seal, bronze non–rising stems, gate valves. Valvesshall open left and be tested to 500 psi with a 250 psi working pressure.
9. Water services, where indicated on the "Quantity Estimate" as "long" or "short", shall include the necessary length of Type "K": copper water tube of the size shown on the plans, corporation stop, curb stop, and service box, and all necessary labor, tools, equipment, excavation & backfill, for a complete installation as shown on the Engineering plans. Trench backfill will be paid for separately, when required.
10. Valve Boxes
    a. Valve boxes shall be adjustable, 3–piece cast iron, 5–1/4 inch shaft roadway–type and no–tilit drop cover with "WATER" cast into it.
    b. Valve box stabilizer of PVC manufactured by Valve Box Stabilizer, Inc. for six–inch (6") and eight–inch (8") valve boxes shall be provided.
    c. Valve box must have additional upward or downward travel when adjusted to finished grade.
11. Valve Vaults
    a. All valve vaults shall be precast reinforced concrete only.
    b. All valve vaults shall have no more than two adjusting rings with a minimum of four inches (4") and a maximum of twelve inches (12") of adjusting rings.
    c. All lifting holes, joints between precast reinforced concrete sections, rubber gaskets cast into concrete structures need to be water tight and shall be tuckpointed with hydraulic cement.
    d. All castings shall be set on bitumastic material.
    e. Bitumastic material shall be placed between precast reinforced concrete sections.
    f. All valve vaults shall have neoprene coated or fiberglass steps.
    g. Vaults and boxes shall not be allowed under streets, sidewalks or driveways.

WATER MAIN

11. Fire Hydrants
    a. Fire Hydrants shall be Mueller super centurian 250. Factory painted safety red with 5–1/4 inch valve opening and shall be painted red.
    b. The hydrant shall be for a five foot (5') bury with mechanical joint shoe and have two 2–1/2 inch hose connections and one four and one–half inch (4–1/2") male pumper connection. Thread shall be National Standard.
    c. The hydrant shall have a break–away traffic flange and connections.
    d. All fire hydrants not in service shall be bagged.
    e. Hydrants leads shall be six–inch (6") swivel anchoring coupling. Hydrant tees shall be used in lieu of swivel anchoring coupling pipe where required to meet plan locations.
    f. The maximum distance between fire hydrants shall be 350 feet.
    g. All fire hydrants shall be kept clear of obstructions within three (3) feet in all directions. This shall include posts, fences, vehicles, growth, trash, storage, and any other material or objects.
    h. All fire hydrants to have a 10 pound anode bag attached to the hydrant.
12. Pipe Cover and Separation
    a. Cover over water pipes shall be a minimum of 5.5 feet.
    b. Horizontal and vertical separation shall meet requirements of the "Standard Specifications for Water and Sewer Main Construction in Illinois." Locations requiring alternative materials are noted on the plans.
13. Pipe Laying
    a. The contractor shall keep the trench free from water while the water main is being placed and until the pipe joint has been sealed to the satisfaction of the Village Engineer.
    b. Adequate provisions shall be made for the safety, storage, and protection of all water pipe prior to installation in the trench. Care shall be taken to prevent damage to the pipe castings, both inside and out. Provisions shall be made to keep the inside of the pipe clean throughout its storage period and to keep mud and/or other debris from being deposited therein. All pipe shall be thoroughly cleaned on the inside before laying of the pipe. Proper equipment shall be used for the safe handling, conveying, and laying of the pipe so as to prevent damage to water main materials and protective coatings and linings. Under no circumstances shall water main materials be dropped or dumped into the trench.
    c. In making joints, all portions of the jointing materials and the socket and spigot ends of the joining pipe shall be wiped clean of all foreign materials. The actual assembly of the jointing shall be in accordance with the manufacturer's installation instructions. During construction, until jointing operations are complete, the open ends of all pipes shall at all times be protected and sealed with temporary watertight plugs.
    d. During water main installation, to make a closure between two pipe ends, or between pipe end fittings, or between pipe end and valve, short lengths shall be used with proper connections or couplings. Repair sleeves shall not be used to make closures during new construction.
    e. All pipe and trenching shall be viewed and approved by the Municipality prior to cover and backfill.
    f. All bends of 22–1/2 degrees or greater, and all tees and plugs shall be thrust protected to prevent movement of the line under pressure. Thrust protection may also be attained by the use of a combination or retaining glands and threaded rods. All locations of thrust blocking or retaining glands/rods need to be marked on the as built drawing.
14. Testing and Disinfection
    a. Water main shall be tested in accordance with AWWA C–600 & the local jurisdictional requirements prior to it final acceptance. A 24 hour system pressure test needs to be performed as per the Standard Specifications. The pressure and leakage tests and disinfection of the mains shall be as described in the "Standard Specifications" unless the local requirements are more restrictive. All valve vaults shall be clean and free of debris and water, and individual service boxes shall be visible and clearly located prior to their final acceptance.
    b. The preferred point of application of the chlorinating agent shall be at the beginning of the pipeline extension or any valved section of it and through a corporation stop in the top of the newly laid pipe. The injector for delivering the chlorine gas into the pipe should be supplied from a tap on the pressure side of the gate valve controlling the flow into the pipeline extension.
    c. Water from the existing distribution system or any other source of supply shall be controlled so as to flow slowly into the newly laid pipeline during the application of chlorine–gas. The rate of chlorine mixture flow shall be in such proportion to the rate of water entering the pipe that the chlorine dose applied to the water entering the newly laid pipe shall be at least fifty parts–per–million (50ppm), or enough to meet the requirements during the retention period.
    d. Valves shall be manipulated so that the strong chlorine solution in the line being treated shall not flow back into the line supplying the water. The pipe section being chlorinated shall be kept at a lower pressure than the water system pressure.
    e. Treated water shall be retained in the pipe long enough to destroy all spore–forming bacteria. This retention period shall be at least twenty–four (24) hours. After the chlorine–treated water has been retained for the required time, the chlorine residual at the pipe extremities and at other representative points shall be at least twenty five parts–per–million (25ppm).
    f. In the process of chlorinating newly laid pipe, all valves or other appurtenances shall be operated while the pipeline is filled with the chlorinating agent.
    g. After all mains have been pressure tested, they shall be disinfected and tested according to the requirements of the Standards for Disinfecting Water Mains, AWWA C–601 and C–651, and as required by this Section. All disinfection, as required by this Section, shall be performed by an independent firm exhibiting experience in the methods and techniques of this operation, and shall be approved by the Village Public Works Department. The contractor shall obtain two samples of water from the main for bacteriological testing. A second series of samples shall be collected no less than 24 hours after the first set of samples has been collected. The contractor and the Village will be furnished with copies of the bacteriological report for their records.

STORM SEWER

1. All storm sewer shall conform to the requirements of The Standard Specifications for Water and Sewer Main Construction in Illinois
2. Storm sewers shall be reinforced concrete pipe conforming to ASTM C76 minimum Class III with O–ring joints conforming to ASTM C443.
3. Bedding shall be minimum of 6" of CA–7.
4. Minimum size shall be twelve inches (12").
5. Storm Structures
   a. Rear yard catch basins are not allowed.
   b. All storm structures shall be precast reinforced concrete only.
   c. All storm structures shall be set on a six–inch (6") CA–7 cushion.
   d. All storm structures shall have no more than two adjusting rings within a minimum of four inches (4") and a maximum of twelve inches (12") of adjusting rings.
   e. All lifting holes, joints between precast reinforced concrete sections, gaps between pipes and structures shall be tuckpointed with hydraulic cement.
   f. Bitumastic material shall be placed between precast reinforced concrete sections.
   g. All steps shall be fiberglass or neoprene coated.
   h. All structure connections shall be concrete sewer pipe, ASTM C14 for extra strength pipe
6. Storm sewer and all storm structures shall be clean and free of debris prior to their final acceptance. Storm Sewer shall be inspected and tested in accordance with the local jurisdictional requirements including television inspection for review by the Village Engineer.
7. All flared end sections less than 48" (effective diameter) require grates in accordance with IDOT specifications.
8. All castings shall be made in the USA with USA materials. Closed covers shall be stamped per Exhibit 2B. Open covers shall have the grates as specified in the plans.

PAVING CURBS AND SIDEWALK

1. Fine Grading
   a. Prior to the construction of the curb and gutter and the placement of the base material, the streets shall be fine graded to within 0.1 feet + of final subgrade elevation, to a point two (2) feet beyond the back of the proposed curb.
2. Curb and Gutter
   a. The curb and gutter shall be the type as detailed on the Engineering Plans.
   b. The curbs shall be backfilled after their construction and prior to the placement of the base course.
3. Pavement
   a. The pavement materials shall be as detailed on the Engineering Plans. Thickness specified shall be considered to be the minimum compacted thickness.
4. General. The Paving Contractor shall:
   a. Repair any base course and binder course failures prior to the installation of the final bituminous concrete surface course.
   b. Sweep clean the binder course prior to the installation of the final bituminous concrete surface course. Excessive cleaning of the binder course that may be required, and is not the fault of the Paving CONTRACTOR, shall be paid for on a time and material basis by prior agreement with the OWNER.
   c. Permit the bituminous concrete binder course to weather one (1) winter season prior to the installation of the bituminous concrete surface course.
   d. Street signs & Traffic signs.
5. Testing and Final Acceptance
   a. Prior to the placement of the base course, the subgrade must pass a proof roll test to be approved by the local jurisdictional authority. The Village shall be contacted at least 2 business days in advance of the proof roll. (See "Testing and Final Acceptance for Earthwork")
   b. Prior to placement of the bituminous concrete surface course, the CONTRACTOR if requested by the OWNER, shall obtain specimens of the binder course with a core drill where directed by the ENGINEER, for the purpose of thickness verification. Coring shall be in accordance with the applicable provisions of ART.406.15 of the Standard Specification entitled "Standard Specifications for Road and Bridge Construction". The cost for obtaining cores, which meet or exceed the specification, shall be borne by the OWNER.
   c. Deficiencies in the bituminous concrete binder course shall be adjusted for by increasing the plan thickness of the surface course with no additional cost to the OWNER.
   d. A nuclear density test must be conducted on asphalt pavement in accordance with IDOT standards.
   e. Final acceptance of the total pavement installation shall be subject to the testing and checking requirements cited above.
6. Method of Measurement
   a. Curb and Gutter, and base course shall be measured in the field by the CONTRACTOR. The quantities shall be submitted to the OWNER for verification.
   b. When requested by the OWNER, documentation for the installed base course, bituminous concrete binder, and surface, shall be submitted to the ENGINEER for verification. Deficiencies in total bituminous concrete pavement thickness shall be adjusted for in accordance with the requirements of the jurisdictional authority.
7. Basis of Payment
   a. Curb and Gutter will be paid for at the contract unit price per LINEAL FOOT.
   b. Prime Coat material will be paid for at the contract unit price per GALLON.
   c. Base Course will be paid for at the contract unit price per SQUARE YARD.
   d. Bituminous Concrete will be paid for at the contract unit price per SQUARE YARD.

GENERAL NOTES

1. Definition of Terms
   a. The CONTRACTOR is the individual, firm, partnership or corporation contracting with the OWNER for performance of the prescribed work.
   b. The OWNER is the individual, firm, partnership or corporation having the authority to award the contract for the prescribed work.
   c. The ENGINEER where specifically referred to in the Specifications shall be the OWNER'S representative.
2. All CONTRACTORS shall be responsible for the following, which shall also be incidental to the cost of construction:
   a. Examination of the Engineering Plans and Specifications and the existing site conditions prior to submitting a bid, and notifying the ENGINEER at once of any discrepancies.
   b. The obtaining of any necessary permits not previously applied for by the OWNER, and posting of the necessary bonds.
   c. The notification of the start of construction to theVillage of WESTERN SPRINGS Public Services Dept. at (708) 246–8540, utility companies, and the ENGINEER at least two (2) working days prior to said start. All existing utilities must be staked prior to construction. All construction, including equipment startup, shall be between the hours of 7:00 a.m. to 8:00 p.m. weekdays, and 8:00 a.m. to 7:00 p.m. weekends and holidays.
   d. Calling attention to the OWNER of any errors or discrepancies, which may be suspected in lines and grades, which are established by the OWNER. The CONTRACTOR shall not proceed with the work until the lines and grades which are believed to be in error have been verified or corrected by the OWNER. Additional staking that may be required due to CONTRACTOR negligence shall be paid for by the CONTRACTOR.
   e. The providing of safe and healthful working conditions throughout the prosecution of the construction work. This shall include, but not be limited to: the removal of debris, the protecting of construction hazards with barricades and the keeping of public street pavements clean of construction dirt and debris.
   f. The restoration to the original condition or better of any areas that are damaged by the CONTRACTOR during construction.
   g. The testing of materials, if required by the OWNER and/or the jurisdictional agencies.
   h. The guarantee of all materials and workmanship for a period of one (1) year upon final acceptance by the OWNER and other jurisdictional agencies.
   i. Trees shall be installed a minimum of five (5) feet horizontally from sanitary sewers, sanitary services, watermains, and water services. Trees and light poles shall be installed a minimum of ten (10) feet horizontally from utility structures and appurtenances, including but not limited to manholes, valve vaults, valve boxes and fire hydrants.
   j. The contractor shall be responsible for implementation & maintenance of all soil erosion & sedimentation control measures throughout the entire project.
   k. Contractors are required to obtain applicable permits from the Municipality.
3. The OWNER shall be responsible for the following:
   a. Scheduling the necessary preconstruction meeting(s) with the jurisdictional agencies at least two (2) working days prior to the commencement of work.
   b. Insurance certificates from all contractors, naming the Village of WESTERN SPRINGS as additional insured, prior to preconstruction meeting being set.
   c. Providing the CONTRACTOR with one (1) set of control line and grade stakes (at offsets mutually agreed upon) for the proper prosecution and control of the work.
   d. Applying for IEPA, IDOT, and all applicable County, Municipal and Sanitary District Permits. Other necessary permits shall be the responsibility of the CONTRACTOR.
4. The ENGINEER shall be responsible for the following:
   a. To periodically visit the construction site in order to better carry out the duties and responsibilities assigned by the OWNER and undertaken by the ENGINEER.
   b. The ENGINEER shall not, during such visits or as a result of such observations of the CONTRACTOR(s)' work in progress, supervise, direct or have control over the CONTRACTOR(s)' work nor shall the ENGINEER have authority over or responsibility for the means, methods, techniques, sequences or procedures of construction selected by the CONTRACTOR(s)', for safety precautions and programs incident to the work of the CONTRACTOR(s) or for any failure of the CONTRACTOR(s) to comply with laws, rules, regulations, ordinances, codes or orders applicable to the CONTRACTOR(s) furnishing and performing their work. Accordingly, the ENGINEER can neither guarantee the performance of the construction contracts by the CONTRACTOR(s) nor assume responsibility for the CONTRACTOR(s)' failure to furnish and perform their work in accordance with the Contract Documents.
5. Except where modified by the contract documents, all work proposed herein shall be in accordance with the following specifications, which are hereby made a part hereof:
   a. "Standard Specifications for Road and Bridge Construction", and "Supplemental Specifications and Recurring Special Provisions", latest edition, prepared by the Illinois Department of Transportation (IDOT Standard Specifications).
   b. Standard Specifications for Water and Sewer Main Construction in Illinois, latest edition, as adopted by the Illinois Society of Professional Engineers, etal.
   c. Illinois Urban Manual, latest edition.
   d. Village of WESTERN SPRINGS Codes and Ordinances, current edition when these plans were approved.
   e. American With Disabilities Act, Standards for Accessible Design, latest ed.
6. In the event of a conflict between statements, which apply to the construction work, the OWNER should contact the Public Works Director for direction.

MWRD SPECIFICATIONS

A. Referenced Specifications

1. All construction shall be in accordance with the applicable sections of the following, except as modified herein or on the plans;
   a. Sstandard Sspecifications for Road and Bridge Construction (latest edition), by the Illinois Department of Transportation (IDOTt SS) for all improvements except sanitary sewer and water main construction;
   b. Standard Specifications for Water and Sewer Main Construction in Illinois, latest edition (SSWS) for sanitary sewer and water main construction;
   c. Village of WESTERN SPRINGS municipal code (latest edition);
   d. The Metropolitan Water Reclamation District of Greater Chicago (NWRD) Watershed Management Ordinance and Technical Guidance Manual (latest edition);
   e. In case of conflict between the applicable ordinances noted, the more stringent shall take precedence and shall control all construction.

B. Notifications

1. The MWRD local sewer systems section field office must be notified at least two (2) working days prior to the commencement of any work (call 708–588–4055).
2. The Village of WESTERN SPRINGS Engineering Department and Public Works must be notified at least 24 hours prior to the start of construction and prior to each phase of work. Contractor shall determine items requiring inspection prior to start of construction or each work phase.
3. The Contractor shall notify all utility companies prior to beginning construction for the exact locations of utilities and for their protection during construction. If existing utilities are encountered that conflict in location with new construction, immediately notify the engineer so that the conflict can be resolved. call J.U.L.I.E. at 1–800–892–0123.

C. General Notes

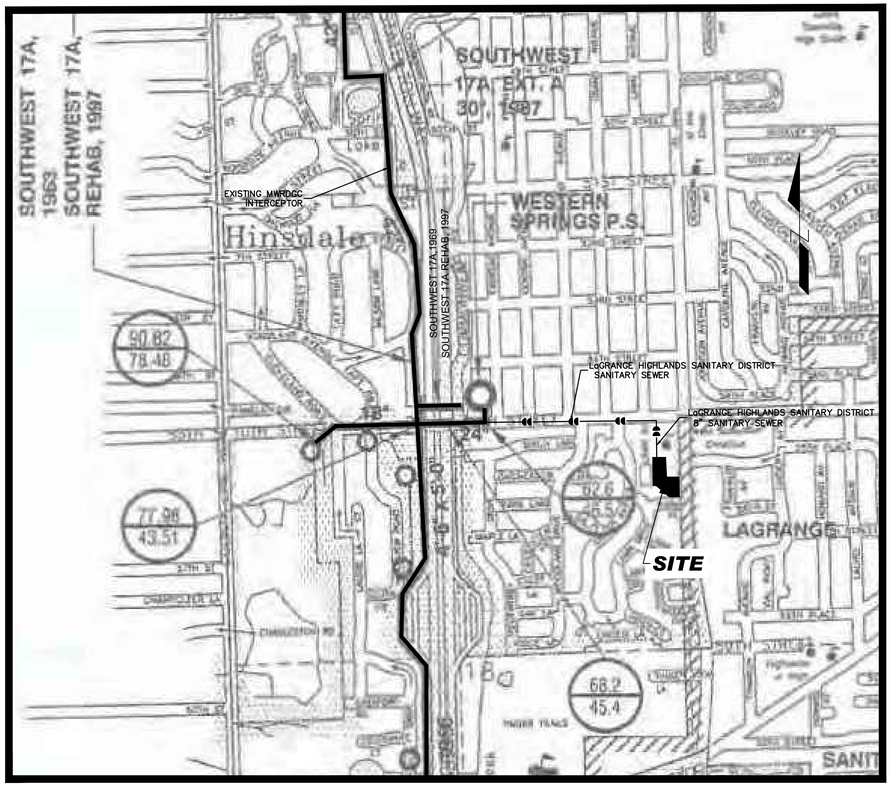
1. All elevations shown on plans reference the north american vertical datum of 1988 (NAVD88). Conversion factor is XXXX ft.
2. MWRD, the Municipality and the Owner or Owner's Representative shall have the authority to inspect, approve, and reject the construction improvements.
3. The Contractor(s) shall indemnify the Owner, Engineer, Municipality, MWRD, and their Agents,from all liability involved with the construction, installation, or testing of this work on the project.
4. The proposed improvements must be constructed in accordance with the engineering plans as approved by mwrd and the municipality unless changes are approved by MWRD, the Municipality, or authorized agent. The construction details, as presented on the plans, must be followed. Proper construction techniques must be followed on the improvements indicated on the plans.
5. The location of various underground utilities which are shown on the plans are for information only and represent the best knowledge of the Engineer. Verify locations and elevations prior to beginning the construction operations.
6. Any existing pavement, sidewalk, driveway, etc., damaged during construction operations and not called for to be removed shall be replaced at the expense of the Contractor.
7. Material and compaction testing shall be performed in accordance with the requirements of the Municipality, MWRD, and Owner.
8. The Underground Contractor shall make all necessary arrangements to notify all inspection agencies.
9. All new and existing utility structures on site and in areas disturbed during construction shall be adjusted to finish grade prior to final inspection.
10. Record drawings shall be kept by the Contractor and submitted to the Engineer as soon as underground improvements are completed. Final payments to the Contractor shall be held until they are received. Any changes in length, location or alignment shall be shown in red. All wyes or bends shall be located from the downstream manhole. All valves, B–Boxes, tees or bends shall be tied to a fire hydrant.

D. Sanitary Sewer

1. The Contractor shall take measures to prevent any polluted water, such as ground and surface water, from entering the existing sanitary sewers.
2. A water–tight plug shall be installed in the downstream sewer pipe at the point of sewer connection prior to commencing any sewer construction. the plug shall remain in place until removal is authorized by the Municipality and/or MWRD after the sewers have been tested and accepted.
3. Discharging any unpolluted water into the sanitary sewer system for the purpose of sewer flushing of lines for the deflection test shall be prohibited without prior approval from the Municipality or MWRD.
4. All sanitary sewer construction shall be in accordance with the Standard Specifications for Water and Sewer Main Construction in Illinois (latest edition).
5. All floor drains shall discharge to the sanitary sewer system.
6. All downspouts and footing drains shall discharge to the storm sewer system.
7. All sanitary sewer pipe materials and joints (and storm sewer pipe materials and joints in a combined sewer area) shall conform to the following:

Pipe Material	Pipe Specifications	Joint Specifications
Vitrified Clay Pipe	ASTM C–700	ASTM C–425
Reinforced Concrete Sewer Pipe	ASTM C–76	ASTM C–443
Cast Iron Soil Pipe	ASTM A–74	ASTM C–564
Ductile Iron Pipe	ANSI A21.51	ANSI A21.11
Polyvinyl Chloride (PVC) Pipe 6–inch to 15–inch Diameter SDR 26 18–inch to 27–inch Diameter F/DY=46	ASTM D–3034 ASTM F–679	ASTM D–3212 ASTM D–3212
High Density Polyethylene (HDPE)	ASTM D–3350 ASTM D–3035	ASTM D–3261, F–2620 (heat fusion) ASTM D–3212, F–477 (gasketed)
Water Main Quality PVC 4–inch to 36–inch 4–inch to 12–inch 14–inch to 48–inch	ASTM D–2241 AWWA C900 AWWA C905	ASTM D–3139 ASTM D–3139 ASTM D–3139

The following materials are allowed on a qualified basis subject to District review and approval prior to permit issuance. A special condition will be added to the permit when the pipe material below is used for sewer construction or a connection is made.



Pipe Material	Pipe Specification	Joint Specification
Polypropylene (PP) Pipe		
12–inch to 24–inch Double Wall	ASTM F–2736	ASTM D–3212,F–477
30–inch to 60–inch Triple Wall	ASTEM F–2764	ASTM D–3212, F–477

8. All sanitary sewer construction (and storm sewer construction in combined sewer areas), requires stone bedding with stone ¼" to 1" in size, with minimum bedding thickness equal to ¼ the outside diameter of the sewer pipe, but not less than four (4) inches or more than eight (8) inches. Material shall be CA–7, CA–11 or CA–13 and shall be extended at least 12" above the top of the pipe when using PVC.
9. Non–shear flexible–type couplings shall be used in the connection of sewer pipes of dissimilar pipe materials.
10. All manholes shall be provided with bolted, watertight covers. Sanitary lids shall be constructed with a concealed pickhole and watertight gasket with the word "sanitary" cast into the lid.
11. When connecting to an existing sewer main by means other than an existing wye, tee, or an existing manhole, one of the following methods shall be used:
    a. A circular saw–cut of sewer main by proper tools ("shewer–Tap" machine or similar) and proper installation of hubwye saddle or hub–tee saddle.
    b. Remove an entire section of pipe (breaking only the top of one bell) and replace with a wye or tee branch section.
    c. With pipe cutter, neatly and accurately cut out desired length of pipe for insertion of proper fitting, using "band seal" or similar couplings to hold it firmly in place.
12. Whenever a sanitary/combined sewer crosses under a watermain, the minimum vertical distance from the top of the sewer to the bottom of the watermain shall be 18 inches. Furthermore, a minimum horizontal distance of 10 feet between sanitary/combined sewers and watermains shall be maintained unless: the sewer is laid in a separate trench, keeping a minimum 18" vertical separation; or the sewer is laid in the same trench with the watermain located at the opposite side on a bench of undisturbed earth, keeping a minimum 18" vertical separation. If either the vertical or horizontal distances described above cannot be maintained, or the sewer crosses above the watermain, the sewer shall be constructed to water main standards or it shall be encased with a water main quality carrier pipe with ends sealed.
13. All existing septic systems shall be abandoned. Abandoned tanks shall be filled with a granular material or removed.
14. All sanitary manholes, (and storm manholes in combined sewer areas), shall have a minimum inside diameter of 48 inches, and shall be cast in place or pre–cast reinforced concrete.
15. All sanitary manholes, (and storm manholes in combined sewer areas), shall have precast "rubber boots" that conform to ASTM C–923 for all pipe connections. Precast sections shall consist of modified groove tongue and rubber gasket type joints.
16. All abandoned sanitary sewers shall be plugged at both ends with at least 2 feet long non–shrink concrete or mortar plug.
17. Except for foundation/footing drains provided to protect buildings, or perforated pipes associated with volume control facilities, drain tiles/field tiles/underdrains/perforated pipes are not allowed to be connected to or tributary to combined sewers, sanitary sewers, or storm sewers tributary to combined sewers in combined sewer areas. Construction of new facilities of this type is prohibited, and all existing drain tiles and perforated pipes encountered within the project area shall be plugged or removed, and shall not be connected to combined sewers, sanitary sewers, or storm sewers tributary to combined sewers.
18. A backflow preventer is required for all detention basins tributary to combined sewers. Required backflow preventers shall be inspected and exercised annually by the property owner to ensure proper operation, and any necessary maintenances shall be performed to ensure functionality. In the event of a sewer surcharge into an open detention basin tributary to combined sewers, the permittee shall ensure that clean up and wash out of sewage takes place within 48 hours of the storm event.

MWRD SPECIFICATIONS CONT'D

E. Erosion and Sediment Control

1. The contractor shall install the erosion and sediment control devices as shown on the approved erosion and sediment control plan.
2. Erosion and sediment control practices shall be functional prior to hydrologic disturbance of the site.
3. All design criteria, specifications, and installation of erosion and sediment control practices shall be in accordance with the Illinois urban manual.
4. A copy of the approved erosion and sediment control plan shall be maintained on the site at all times.
5. Inspections and documentation shall be performed, at a minimum:
   a. Upon completion of initial erosion and sediment control measures, prior to any soil disturbance.
   b. Once every seven (7) calendar days and within 24 hours of the end of a storm event with greater than 0.5 inch of rainfall or liquid equivalent precipitation.
6. Soil disturbance shall be conducted in such a manner as to minimize erosion. If stripping, clearing, grading, or landscaping are to be done in phases, the co–permittee shall plan for appropriate soil erosion and sediment control measures.
7. A stabilized mat of crushed stone meeting the standards of the illinois urban manual shall be installed at any point where traffic will be entering or leaving a construction site. Sediment or soil reaching an improved public right–of–way, street, alley or parking area shall be removed by scraping or street cleaning as accumulations warrant and transported to a controlled sediment disposal area.
8. Concrete washout facilities shall be constructed in accordance with the Illinois Urban Manual and shall be installed prior to any on site construction activities involving concrete.
9. Mortar washout facilities shall be constructed in addition to concrete washout facilities for any brick and mortar building envelope construction activities.
10. Temporary diversions shall be constructed as necessary to direct all runoff from hydrologically disturbed areas to an appropriate sediment trap or basin. Volume control facilities shall not be used as temporary sediment basins.
11. Disturbed areas of the site where construction activities have temporarily or permanently ceased shall be stabilized with temporary or permanent measures within seven (7) days.
12. All flood protection areas and volume control facilities shall, at a minimum, be protected with a double–row of silt fence (or equivalent).
13. Volume control facilities shall not be constructed until all of the contributing drainage area has been stabilized.
14. Soil stockpiles shall, at a minimum, be protected with perimeter sediment controls. Soil stockpiles shall not be placed in flood protection areas or their buffers.
15. Earthen embankment side slopes shall be stabilized with appropriate erosion control blanket.
16. Storm sewers that are or will be functioning during construction shall be protected by appropriate sediment control measures.
17. The contractor shall either remove or replace any existing drain tiles and incorporate them into the drainage plan for the development. Drain tiles cannot be tributary to a sanitary or combined sewer. Drain tiles allowed in combined sewer area for green infrastructure practices.
18. If dewatering services are used, adjoining properties and discharge locations shall be protected from erosion and sedimentation. Dewatering systems should be inspected daily during operational periods. the site inspector must be present at the commencement of dewatering activities.
19. The contrctor shall be responsible for trench dewatering and excavation for the installation of sanitary sewers, storm sewers, watermains as well as their services and other appurtenances. Any trench dewatering, which contains sediment shall pass through a sediment settling pond or equally effective sediment control device. Alternatives may include dewatering into a sump pit, filter bag or existing vegetated upslope area. sediment laden waters shall not be discharge to waterways, flood protection areas or the combined sewer system.
20. All permanent erosion control practices shall be initiated within seven (7) days following the completion of soil disturbing activities.
21. All erosion and sediment control measures shall be maintained and repaired as needed on a year–round basis during construction and any periods of construction shutdown until permanent stabilization is achieved.
22. All temporary erosion and sediment control measures shall be removed within thirty (30) days after permanent site stabilization.
23. The erosion and sediment control measures shown on the plans are the minimum requirements. additional measures may be required, as directed by the Engineer, Site Inspector, or MWRD.

EROSION CONTROL & SEDIMENTATION NOTES

1. UNLESS OTHERWISE INDICATED, ALL VEGETATIVE AND STRUCTURAL EROSION AND SEDIMENT CONTROL PRACTICES WILL BE CONSTRUCTED ACCORDING TO MINIMUM STANDARDS AND SPECIFICATIONS IN THE ILLINOIS URBAN MANUAL, LATEST EDITION, AND ALL OTHER AUTHORITIES HAVING JURISDICTION.
2. THE APPLICANT AND/OR CONTRACTOR IS RESPONSIBLE FOR INSURING THE OBTAINED PERMIT WITH THE COMPLETED SWPPP IS POSTED ON SITE IN A PROMINENT LOCATION BEFORE COMMENCEMENT OF ANY WORK ON SITE AND SHALL CONTACT THE VILLAGE AT LEAST 2 WORKING DAYS BEFORE THE START OF CONSTRUCTION, INSTALLATION OF SEDIMENT AND EROSION MEASURES AND COMPLETION OF FINAL LANDSCAPING.
3. THE VILLAGE SHALL BE PROVIDED WITH A COPY OF THE IEPA LETTER OF NOTIFICATION OF COVERAGE PRIOR TO COMMENCEMENT OF CONSTRUCTION.
4. THE DEVELOPER IS RESPONSIBLE FOR HAVING THE SWPPP AND A STAMPED AND SIGNED COPY OF THE APPROVED SOIL EROSION AND SEDIMENT CONTROL PLAN ON SITE AT ALL TIMES AND BE PRESENTED WHEN REQUESTED BY ANY AUTHORIZED AGENCY.
5. THE DEVELOPER SHALL INSPECT THE SOIL EROSION AND SEDIMENT CONTROL PRACTICES EVERY SEVEN (7) DAYS AND AFTER 0.5" OR MORE RAINFALL. IMMEDIATE REPAIR SHALL BE MADE OF ANY DAMAGED EROSION CONTROL ELEMENTS THROUGHOUT THE CONSTRUCTION OF THE PROJECT.
6. ALL CONSTRUCTION TRAFFIC SHALL ENTER SITE ONLY AT PROPOSED STABILIZED CONSTRUCTION ENTRANCE AS SHOWN ON PLANS.
7. ALL DIRT, MUD, OR DEBRIS THAT REACHES THE PUBLIC ROADS SHALL BE CLEANED IMMEDIATELY BY THE CONTRACTOR.
8. TECHNIQUES SHALL BE EMPLOYED TO PREVENT THE BLOWING OF DUST OR SEDIMENT FROM THE SITE.
9. SILT FENCE, SILT BASINS, AND STABILIZED CONSTRUCTION ENTRANCE(S) SHALL BE CONSTRUCTED AS DETAILED ON THE FINAL ENGINEERING PLANS PRIOR TO THE START OF CONSTRUCTION AND SHALL REMAIN IN PLAN UNTIL THE DISTURBED AREA IS STABILIZED. IN ADDITION, SILT FENCE SHALL BE PROVIDED FOR AREAS DRAINING 200' AND GREATER IN ACCORDANCE WITH NRCS CODE 920.
10. SCHEDULE OF CONTROL MEASURE IMPLEMENTATION:
    A. CONSTRUCT THE APPLICABLE PORTIONS OF THE EROSION AND SEDIMENTATION CONTROLS PRIOR TO SITE CLEARING.
    B. CONTROL SITE DEVELOPMENT IN ACCORDANCE WITH THE SPECIFICATIONS.
    C. MAINTAIN INLET PROTECTION, CONSTRUCTION TRAFFIC SURFACES, CLEANING OF STORM STRUCTURES AND THE LIKE ON A REGULAR BASIS AFTER EACH HEAVY RAIN OR AS OTHERWISE REQUIRED.
11. THE ESTIMATED CONSTRUCTION SCHEDULE IS AS FOLLOWS:

DEMOLITION	WINTER	2025
MASS EARTHWORK	SPRING	2025
TEMPORARY BASIN STABILIZATION	SPRING	2025
UNDERGROUND IMPROVEMENTS	SPRING/SUMMER	2025
ROADWAY (CURB & PAVEMENT)	SUMMER	2025
BUILDING CONSTRUCTION	SUMMER	2025
FINAL GRADING	SUMMER	2025
BASIN STABILIZATION	SUMMER	2025
FINAL LANDSCAPING	SUMMER	2026

    THE ENTIRE SITE MUST BE STABILIZED, USING A HEAVY MULCH LAYER OR ANOTHER METHOD AT THE CLOSE OF THE CONSTRUCTION SEASON.
12. DISTURBED AREAS WITHIN ALL PUBLIC R.O.W.'S SHALL BE RESTORED W/ 6" MIN. TOPSOIL & SOD. RESTORATION SHALL OCCUR IMMEDIATELY AFTER COMPLETION OF CONSTRUCTION, WEATHER PERMITTING. ALL OTHER DISTURBED AREAS SHALL BE RESTORED WITH 4" TOPSOIL & SEED.
13. STRAW BALES ARE NOT PERMITTED IN AREAS OF CONCENTRATED FLOW. ROCK CHECK DAMS SHALL BE USED IN THESE AREAS. TECHNIQUES THAT DIVERT UPLAND RUNOFF PAST DISTURBED SLOPES SHALL BE EMPLOYED.
14. THE PROTECTION OF THE OPEN LID DRAINAGE STRUCTURES SHALL BE CONSTRUCTED AS SPECIFIED IN DETAILS. ALL OPEN LID DRAINAGE STRUCTURES LOCATED IN YARD AREAS AND THE SEDIMENTATION BASIN MUST BE PROTECTED PER INLET PROTECTION DETAILS UNTIL SUCH A TIME THAT THE LANDSCAPING IS IN PLACE AND EFFECTIVELY PREVENTING POTENTIAL SILTATION OF THESE STRUCTURES. ALL OPEN LID DRAINAGE STRUCTURES IN PAVED AREAS SHALL HAVE FILTER BASKETS INSTALLED UNDER THE LIDS. IN THE EVENT THE GRAVEL BASE IS NOT IN PLACE UPON INSTALLATION, INLET PROTECTION SHALL BE PROVIDED AS INDICATED PER INLET PROTECTION DETAIL.
15. EROSION CONTROL BLANKET (ECB) SHALL BE INSTALLED TO ALL DISTURBED AREAS WITH SLOPES EQUAL TO OR STEEPER THAN 5H:1V AND IN CRITICAL AREAS (EX: DETENTION BASIN PERIMETERS, STREAMBANKS, BERMS, ETC.) IMMEDIATELY UPON FINAL GRADING. S175 NORTH AMERICAN GREEN (OR SIMILAR) ECB SHALL BE USED. ECB WITH GREEN DYE IS NOT ACCEPTABLE.
16. SOIL STOCKPILES SHALL BE STABILIZED OR COVERED AT THE END OF EACH WORKDAY. STOCKPILES TO REMAIN IN PLACE FOR 14 DAYS OR MORE SHALL RECEIVE TEMPORARY SEEDING.
17. DURING DEWATER OPERATIONS, WATER WILL BE PUMPED INTO SEDIMENT BASINS OR SILT TRAPS. DEWATERING DIRECTLY INTO FIELD TILES OR STORMWATER STRUCTURES IS PROHIBITED.
18. AN INCIDENT OF NON-COMPLIANCE (ION) MUST BE COMPLETED AND SUBMITTED BY THE OWNER TO THE IEPA AND COPIED TO THE VILLAGE IF, AT ANY TIME, AN EROSION OR SEDIMENT CONTROL DEVICE FAILS.
19. A NOTICE OF TERMINATION (NOT) SHALL BE COMPLETED BY THE OWNER IN COMPLIANCE WITH THE NPDES PHASE II REQUIREMENTS WHEN ALL PERMANENT EROSION CONTROL MEASURES ARE IN PLACE WITH A 70% ESTABLISHED RATE OF VEGETATION. THE NOTICE OF TERMINATION SHALL BE SENT TO THE IEPA AND THE VILLAGE.
20. THE CONTRACTOR SHALL TAKE THE NECESSARY STEPS TO CONTROL WASTE SUCH AS DISCARDED BUILDING MATERIALS, CONCRETE TRUCK WASHOUT, CHEMICALS, LITTER AND SANITARY WASTE AT THE CONSTRUCTION SITE THAT MAY CAUSE ADVERSE IMPACTS TO WATER QUALITY.

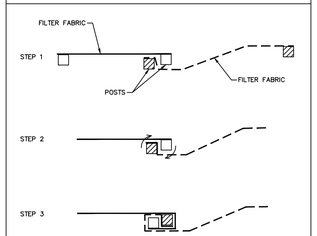
SILT FENCE PLAN

ELEVATION

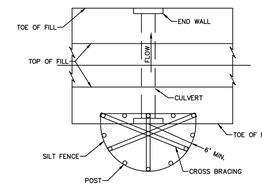


FABRIC ANCHOR DETAIL

NOTES:
1. TEMPORARY SEDIMENT FENCE SHALL BE INSTALLED PRIOR TO ANY GRADING WORK IN THE AREA TO BE PROTECTED. THEY SHALL BE MAINTAINED THROUGHOUT THE CONSTRUCTION PERIOD AND REMOVED IN CONJUNCTION WITH THE FINAL GRADING AND SITE STABILIZATION.
2. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 509 GEOTEXTILE TABLE 1 OR 2, CLASS I WITH EQUIVALENT OPENING SIZE OF AT LEAST 30 FOR NONWOVEN AND 50 FOR WOVEN.
3. FENCE POSTS SHALL BE WITHER STANDARD STEEL POST OR WOOD POST WITH A MINIMUM CROSS–SECTIONAL AREA OF 3.0 SQ. IN.

REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-620
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 2
Checked Date		DATE 11-20-01
Approved Date		

SILT FENCE

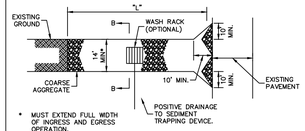


ATTACHING TWO SILT FENCES

NOTES:
1. PLACE THE END POST OF THE SECOND FENCE INSIDE THE END POST OF THE FIRST FENCE.
2. ROTATE BOTH POSTS AT LEAST 180 DEGREES IN A CLOCKWISE DIRECTION TO CREATE A TIGHT SEAL WITH THE FABRIC MATERIAL.
3. DRIVE BOTH POSTS A MINIMUM OF 18 INCHES INTO THE GROUND AND BURY THE FLAP.

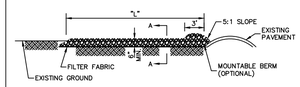
REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-620(W)
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 2
Checked Date		DATE 1-29-99
Approved Date		

CULVERT INLET PROTECTION - SILT FENCE



PLAN VIEW

NOTES:
1. THE SILT FENCE SHALL MEET THE REQUIREMENTS AS SHOWN ON STANDARD DRAWING IL-620 SILT FENCE EXCEPT THE MINIMUM POST SPACING SHALL BE 3 FEET AND THE TOPS OF POSTS SHALL BE CROSS BRACED.
2. SEDIMENT SHALL BE REMOVED WHEN THE SEDIMENT HAS ACCUMULATED TO ONE–HALF THE HEIGHT OF THE SLT FENCE.
3. THE MAXIMUM DRAINAGE AREA TO THE CULVERT BEING PROTECTED IS 1 ACRE.

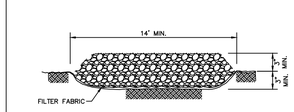


REFERENCE		STANDARD DWG. NO.
Project	NRCS	IL-508SF
Designed Date	Natural Resources Conservation Service	SHEET 1 OF 1
Checked Date		DATE 1-29-99
Approved Date		

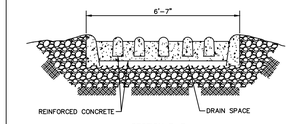
STABILIZED CONSTRUCTION ENTRANCE PLAN

* MUST EXTEND FULL WIDTH OF INGRESS AND EGRESS OPERATION.

PLAN VIEW



SIDE ELEVATION



NOTES:
1. FILTER FABRIC SHALL MEET THE REQUIREMENTS OF MATERIAL SPECIFICATION 592 GEOTEXTILE, TABLE 1 OR 2, CLASS I,II OR IV AND SHALL BE PLACED OVER CLEARED AREA PRIOR TO THE PLACING OF ROCK.
2. ROCK OR RECLAIMED CONCRETE SHALL MEET ONE OF THE FOLLOWING IDOT COARSE AGGREGATE GRADATION, CA–1, CA–2, CA–3, OR CA–4 AND BE PLACED ACCORDING TO CONSTRUCTION SPECIFICATION 25 ROCKFILL USING PLACEMENT METHOD 1 AND CLASS III COMPACTION.
3. ANY DRAINAGE FACILITIES REQUIRED BECAUSE OF WASHING SHALL BE CONSTRUCTED ACCORDING TO MANUFACTURERS SPECIFICATIONS.
4. IF WASH RACKS ARE USED THEY SHALL BE INSTALLED ACCORDING TO THE MANUFACTURER'S SPECIFICATIONS.

PIPE OUTLET SEDIMENT TRAP - ST I

NOT TO SCALE

6. CONSTRUCTION OPERATIONS SHALL BE CARRIED OUT IN SUCH A MANNER THAT EROSION AND WATER POLLUTION ARE ABATED. ONCE CONSTRUCTED, THE TOP AND OUTSIDE FACE OF THE EMBANKMENT SHALL BE STABILIZED WITH SEED AND MULCH. POINTS OF CONCENTRATED INFLOW SHALL BE PROTECTED IN ACCORDANCE WITH GRADE STABILIZATION STRUCTURE CRITERIA. THE REMAINDER OF THE INTERIOR SLOPES SHOULD BE STABILIZED (ONE TIME) WITH SEED AND MULCH UPON TRAP COMPLETION AND MONITORED AND MAINTAINED EROSION FREE DURING THE LIFE OF THE TRAP.
7. THE STRUCTURE SHALL BE REMOVED AND AREA STABILIZED WHEN THE DRAINAGE AREA HAS BEEN PROPERLY STABILIZED.
8. ALL CUT AND FILL SLOPES SHALL BE 2:1 OR FLATTER.
9. ALL PIPE CONNECTIONS SHALL BE WATERTIGHT.
10. ABOVE THE WET STORAGE ELEVATION, THE RISER SHALL BE PERFORATED WITH 1/2" WIDE BY 6" LONG SLITS OR 1" DIAMETER HOLES SPACED 6" VERTICALLY AND HORIZONTALLY. NO PERFORATIONS WILL BE ALLOWED WITHIN 6" OF THE HORIZONTAL BARREL.
11. THE RISER SHALL BE WRAPPED WITH 1/2" HARDWARE CLOTH (WIRE) THEN WRAPPED WITH GEOTEXTILE CLASS E. THE FILTER CLOTH SHALL EXTEND 6" ABOVE THE HIGHEST SLIT AND 6" BELOW THE LOWEST SLIT. WHERE ENDS OF FILTER CLOTH COME TOGETHER, THEY SHALL BE OVERLAPPED, FOLDED AND FASTENED TO PREVENT BYPASS. FILTER CLOTH SHALL BE REPLACED AS NECESSARY TO PREVENT CLOGGING.
12. STRAPS OR CONNECTING BANDS SHALL BE USED TO HOLD THE FILTER CLOTH AND WIRE FABRIC IN PLACE. THEY SHALL BE PLACED AT THE TOP AND BOTTOM OF THE CLOTH.
13. FILL MATERIAL AROUND THE PIPE SPILLWAY SHALL BE HAND COMPACTED IN 4" LAYERS. A MINIMUM OF 2' OF HAND–COMPACTED BACKFILL SHALL BE PLACED OVER THE PIPE SPILLWAY BEFORE CROSSING IT WITH CONSTRUCTION EQUIPMENT.
14. THE RISER SHALL BE ANCHORED WITH EITHER A CONCRETE BASE OR STEEL PLATE BASE TO PREVENT FLOTATION. CONCRETE BASES SHALL BE AT LEAST TWICE THE RISER DIAMETER AND 12" DEEP WITH THE RISER EMBEDDED 9". STEEL PLATE BASES SHALL BE AT LEAST TWICE THE RISER DIAMETER, 1/4" MINIMUM THICKNESS AND ATTACHED TO THE BOTTOM OF THE RISER BY A CONTINUOUS WELD TO FORM A WATERTIGHT CONNECTION. THEN PLACE 2' OF STONE, GRAVEL OR TAMPED EARTH ON THE PLATE.
15. ANTI SEEP COLLARS SHALL BE CONSTRUCTED IN ACCORDANCE WITH PLANS (REF. TABLE 16 AND DETAILS 13 AND 14).
16. CONCENTRIC TRASH RACK AND ANTI–VORTEX DEVICE DESIGN DETAILS ARE ON DETAIL 16.
17. REFER TO SECTION D FOR DEWATERING REQUIREMENTS OF SEDIMENT TRAPS.
18. OUTLET – AN OUTLET SHALL BE PROVIDED, WHICH INCLUDES A MEANS OF CONVEYING THE DISCHARGE IN AN EROSION FREE MANNER TO AN EXISTING STABLE CHANNEL.
19. WHERE DISCHARGE OCCURS AT THE PROPERTY LINE, LOCAL ORDINANCES AND DRAINAGE EASEMENT REQUIREMENTS SHALL BE MET.

EROSION BLANKET PLAN

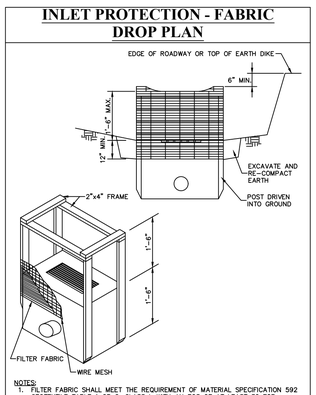
DETAIL 3 DETAIL 4



DETAIL 5

NOTES:
1. ON EROSION CONTROL PAPER, CHECK SLOTS, IN DITCH CHANNEL SHALL BE SPACED SO THAT ONE OCCURS WITHIN EACH 50' ON SLOPES OF MORE THAN 4% AND LESS THAN 6% ON SLOPES OF 6% OR MORE, THEY SHALL BE SPACED SO THAT ONE OCCURS WITHIN EACH 25'.
2. STAPLES ARE TO BE PLACED ALTERNATELY, IN COLUMNS APPROXIMATELY 2' APART AND IN ROWS APPROXIMATELY 3' APART. APPROXIMATELY 175 STAPLES ARE REQUIRED PER 4'x 225' ROLL OF MATERIAL AND 125 STAPLES ARE REQUIRED PER 4'x 150 ROLL OF MATERIAL.
3. EROSION CONTROL MATERIAL SHALL BE PLACED LOOSELY OVER GROUND SURFACE. DO NOT STRETCH.
4. ALL TERMINAL ENDS AND TRANSVERSE LAPS SHALL BE STAPLED AT APPROXIMATELY 12" INTERVALS.

PLAN VIEW

TYPICAL SECTION A–A

NOTES:
1. SEDIMENT SHALL BE REMOVED AND THE TRAP RESTORED TO ITS ORIGINAL DIMENSIONS WHEN THE SEDIMENT HAS ACCUMULATED TO 1/2 THE DESIGN DEPTH OF THE TRAP. REMOVED SEDIMENT SHALL BE DEPOSITED ON A SUITABLE AREA AND IN SUCH A MANNER THAT IT WILL NOT ERODE.
2. THE SEDIMENT TRAP SHALL BE REMOVED AND THE AREA STABILIZED WHEN THE CONSTRUCTION DRAINAGE AREA HAS BEEN PROPERLY STABILIZED.
3. ALL CUT SLOPES SHALL BE 2:1 OR FLATTER.

STORM SEWER GRATES

ROADWAY: EJIW 7525Z & EJIW 7525M
GRASS: EJIW 6527
(UNLESS OTHERWISE NOTED ON PLANS)

UTILITY CROSSING INFORMATION (XX)

1. MAINTAIN 18" MINIMUM VERTICAL SEPARATION BETWEEN WATERMAIN AND STORM/SANITARY SEWERS.
2. DEPTHS OF EXISTING WM ARE ASSUMED AND MUST BE FIELD VERIFIED PRIOR TO START OF CONSTRUCTION.
3. WHEN THE WM CROSSES BELOW A SEWER, THE SEWER MUST BE CONSTRUCTED WITH WM QUALITY PIPE & JOINTS THAT COMPLY WITH 35 IAC 653.119 OR ELSE EITHER PIPE MUST BE INSTALLED IN A CASING. THE PROTECTION MUST EXTEND ON EACH SIDE OF THE CROSSING UNTIL THE NORMAL DISTANCE FROM THE WM TO THE SEWER IS AT LEAST 10 FEET. IN ADDITION, THE WM MUST BE LOCATED AT LEAST 18 INCHES BELOW THE SEWER. THIS 18 INCHES IS A STRUCTURAL PROTECTION TO PREVENT THE SEWER FROM SETTLING AND BREAKING THE WM.
4. WHEN THE WM CROSSES ABOVE A SEWER AND IT IS NOT 18 INCHES ABOVE THE CROWN OF THE SEWER WHERE THE PIPE CROSSES, THE SEWER MUST BE CONSTRUCTED WITH WM QUALITY PIPE & JOINTS (COMPLIANCE SAME AS ABOVE) OR A CASING PIPE CAN BE INSTALLED AROUND THE WM OR THE SEWER. THE CASING PIPE MUST BE A MATERIAL THAT IS APPROVED FOR USE AS WM. CONCRETE IS NOT AN ACCEPTABLE ENCASEMENT.
5. WHEN THE ENCASEMENT OPTION IS USED, IT SHALL BE ONE CONTINUAL SECTION (NO JOINTS).

(XX)

ID	BOTTOM OF PIPE	TOP OF PIPE	VERTICAL SEPARATION	CROSSING INFO.
1	650.83	648.47	2.36'	STORM OVER SANITARY
2	651.24	649.18	2.06'	STORM OVER WATERMAIN (STORM SEWER TO BE C900 PIPE)
3	650.20	649.37	0.83'	STORM OVER SANITARY
4	650.83	649.30	1.53'	STORM OVER WATERMAIN (LOWER AND ENCASE WATERMAIN)

UTILITY PLAN

TYPICAL UTILITY SERVICE DETAIL

NOTES:

1. ALL WATER SERVICES SHALL BE 1-1/2" TYPE "K" COPPER WATER TUBE FROM WATERMAIN TO B-BOX
2. ALL SANITARY SERVICES SHALL BE 6" PVC (SDR 26) AT 1.0% SLOPE MINIMUM FROM SANITARY MAIN TO B-BOX.
3. WATER SERVICES SHALL BE SLEEVED WITH WATER QUALITY PIPE 10' EITHER SIDE OF STORM SEWER CROSSINGS. CASING PIPE VOIDS SHALL BE FILLED AND ENDS SEALED.
4. UNDERGROUND UTILITIES SHALL RECEIVE FULL DEPTH TRENCH BACKFILL WHERE INDICATED PER UNDERGROUND UTILITIES SPECIFICATIONS ON SHEET 2.
   = TRENCH BACKFILL
5. ALL DOWNSPOUTS MUST DISCHARGE AT GRADE AND THE DISCHARGE MUST BE WITHIN 5 FEET OF THE BUILDING WALL PER VILLAGE CODE.

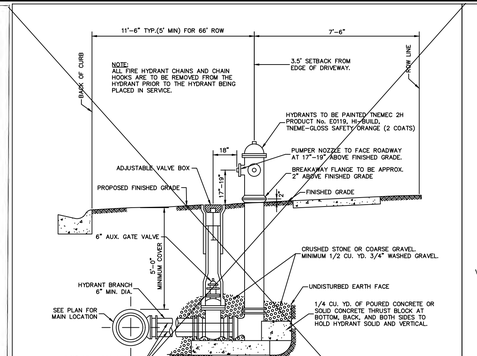
NOTES:

1. PROVIDE SELECT GRANULAR BACKFILL, CA- 11 AROUND CATCH BASIN TO SUBGRADE IN PAVED AREAS
2. ALTERNATE INLET BOTTOM – PRECAST REINFORCED CONCRETE BASE.
3. CONCRETE FILLETS SHALL BE MADE WITH NON-SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
4. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON-HARDENING MASTIC (RUB-R-NEK OR APPROVED EQUAL) TO A MAX. HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
5. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
6. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE MANHOLE WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL INLETS IN PAVED AREAS.

CATCH BASIN TYPE C

NOT TO SCALE



NOTES:

1. ALL FITTINGS SHALL BE COMPRESSION TYPE.
2. TRENCH BACKFILL (CA–7 CRUSHED LIMESTONE) SHALL BE USED UNDER AND WITHIN 2 FEET OF ALL PAVED AREAS (SIDEWALK, DRIVEWAY AND ROADWAY).
3. NO OPEN CUTTING OF PAVEMENT WILL BE PERMITTED. AUGER AND PUSH OR DIRECTIONAL BORE TO RECEIVING PIT IF MAIN IS UNDER PAVEMENT. SEE VILLAGE STANDARD DETAILS FOR PAVEMENT, SIDEWALK OR DRIVEWAY REPLACEMENT. ALL PAVEMENT, SIDEWALK, CURB AND DRIVEWAYS MUST BE SAW CUT FULL DEPTH PRIOR TO REMOVAL.
4. ON 4" WATER MAINS, AN ALL STAINLESS STEEL TAPPING CLAMP SHALL BE USED. IN ADDITION, THE HOLE DRILLED IN THE MAIN SHALL NOT EXCEED 1". EXCEPT FOR THE HOLE DRILLED IN THE MAIN, ALL HARDWARE FOR A 1.5" SERVICE SHALL BE SIZED FOR 1.5"ø.
5. Abandonment of existing water service requires removal of the corporation stop and placement of a stainless solid sleeve repair clamp.
6. NEW SERVICES SHALL BE TAPPED MIN. OF 2 FT. FROM EXISTING TAP.
7. RESTORATION OF PARKWAY SHALL BE MINIMUM 4" OF TOPSOIL AND SOD.
8. ANY DEVIATION FROM THIS PLAN SHALL BE APPROVED IN WRITING BY THE DEPARTMENT OF PUBLIC WORKS (708)246–1800 EXT. 200

**SIZE DETERMINED BY FIXTURE LOAD PER ILLINOIS PLUMBING CODE*

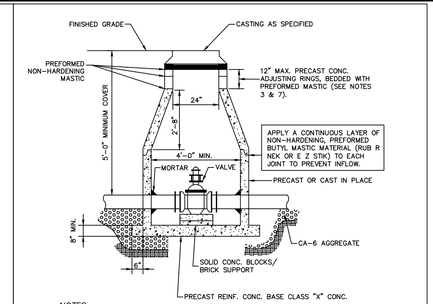
FIRE HYDRANT

NOT TO SCALE

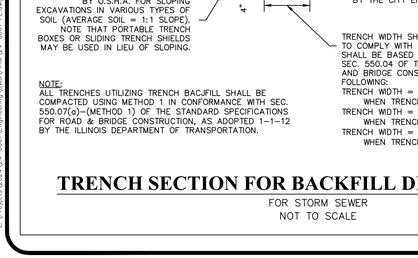


NOTES:

1. 60" DIA FOR ALL PRESSURE CONNECTIONS.
2. PIPE OPENINGS TO BE CAST INTO WALL.
3. PROVIDE CA–6 AGGREGATE BACKFILL AROUND WAULT TO SUBGRADE ELEVATION, IN PAVED AREAS.
4. NO MORE THAN 12 INCHES OF ADJUSTING RINGS MAY BE USED;HOWEVER NO MORE THAT ONE TWO INCH ADJUSTING RING OR NO MORE THAN TWO RINGS IN TOTAL MAY BE USED.
5. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PERFORMED NON–HARDENING MASTIC (RUB R NEK OR APPROVED EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES (12").

VALVE VAULT FOR PRESSURE CONNECTION

NOT TO SCALE



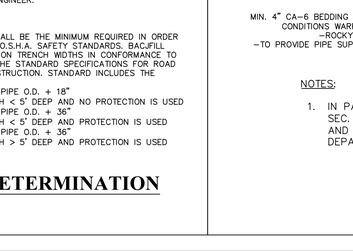
NOTES:

1. VAULT DIAMETER TO BE ONE FOOT LARGER, WHERE VALVE IS LOCATED AT TEE CONNECTION OF MAIN.
2. PROVIDE CA–6 AGGREGATE BACKFILL AROUND VAULT TO SUBGRADE ELEVATION, IN PAVED AREAS.
3. NO MORE THAN 12 INCHES OF ADJUSTING RINGS MAY BE USED. HOWEVER NO MORE THAN ONE, TWO INCH ADJUSTING RING OR NO MORE TAN TWO RINGS IN TOTAL MAY BE USED.
4. VALVE MUST BE ALIGNED WITH CENTER OF VAULT OPENING.
5. CONES MUST BE CONCENTRIC WITH VALVES 12" AND SMALLER.
6. BUTTERFLY VALES REQUIRE ECCENTRIC CONES.
7. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB R NEK OR APPROVED EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES (12").

VALVE VAULT TYPE A

(WATER TIGHT)

NOT TO SCALE

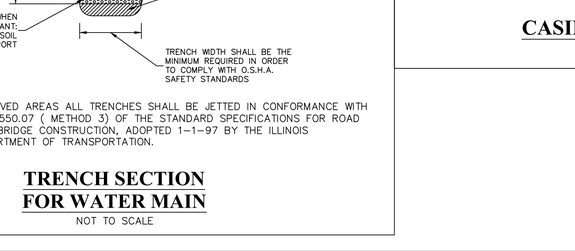


NOTES:

1. PROVIDE SELECT GRANULAR BACKFILL, CA– 11 AROUND MANHOLE TO SUBGRADE ELEVATION IN PAVED AREAS.
2. ALTERNATE MANHOLE BOTTOM – PRECAST REINFORCED CONCRETE
3. CONCRETE FILLETS SHALL BE MADE WITH NON–SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
4. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB–R–NEK OR EQUAL) TO A MAXIMUM HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
5. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
6. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE MANHOLE WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL MANHOLES IN PAVED AREAS.

STORM MANHOLE TYPE A

NOT TO SCALE



NOTES:

1. CATCH BASINS ARE TO BE USED IN PAVED AREAS ONLY.
2. PROVIDE SELECT GRANULAR BACKFILL, CA– 11 AROUND CATCH BASIN TO SUBGRADE ELEVATION.
3. ALTERNATE CATCH BASIN BOTTOM – PRECAST REINFORCED CONCRETE BASE.
4. CONCRETE FILLETS SHALL BE MADE WITH NON–SHRINK MORTAR TO PROVIDE A SMOOTH TRANSITION BETWEEN THE CASTING AND ADJUSTING RING (OR TOP OF STRUCTURE).
5. WHEN ADJUSTMENTS ARE NECESSARY, THEY WILL BE PERFORMED WITH A MAXIMUM OF TWO (2) PRECAST CONCRETE RINGS SET IN A BED OF PREFORMED NON–HARDENING MASTIC (RUB–R–NEK OR APPROVED EQUAL) TO A MAX. HEIGHT OF TWELVE INCHES. TWO (2) INCH RINGS SHALL ONLY BE USED WHEN ADJUSTMENT IS LESS THAN THREE (3) INCHES.
6. NO MORTAR SHALL BE USED TO DRESS UP INTERIOR JOINTS OF ADJUSTING RINGS.
7. A MINIMUM OF FOUR (4), TWO (2) INCH DIAMETER DRAIN HOLES SHALL BE PROVIDED WITHIN ONE (1) FOOT OF THE LOWEST PIPE INVERT. THE HOLES SHALL BE DISTRIBUTED EQUIDISTANT AROUND THE PERIMETER OF THE STRUCTURE. A ONE (1) FOOT BY ONE (1) FOOT SECTION OF UNDERDRAIN FILTER CLOTH MATERIAL SHALL BE SUFFICIENTLY FIXED TO THE OUTSIDE OF THE CATCH BASIN WITH MASTIC MATERIALS TO PREVENT SLIPPAGE DURING BACKFILLING. THE HOLES SHALL BE EITHER PRECAST OR DRILLED. DRAIN HOLES ARE REQUIRED FOR ALL CATCH BASINS.

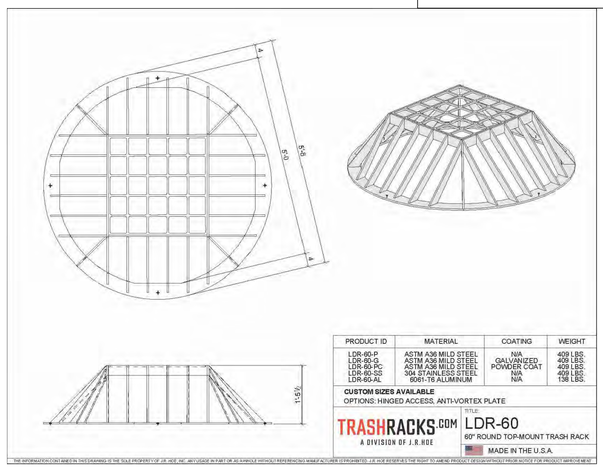
				TOTAL	7,261 ft³



NOTES:
1. THE PERIMETER OF THE VOLUME CONTROL FACILITY SHALL MAINTAIN THE MINIMUM HORIZONTAL SEPARATION DISTANCE OF: 10-FEET FROM FOUNDATIONS, UNLESS WATERPROOFED; 20-FEET FROM ROADWAY GRAVEL SHOULDER; AND 100-FEET FROM POTABLE WATER WELLS, SEPTIC TANKS/FIELDS, OR OTHER UNDERGROUND TANKS.
2. SANITARY OR COMBINED SEWERS SHALL NOT BE LOCATED WITHIN THE VOLUME CONTROL FACILITY. SANITARY OR COMBINED SEWERS SHALL NOT BE LOCATED BELOW THE FOOTPRINT OF THE VOLUME CONTROL FACILITY. WHEN LOCAL CONDITIONS PREVENT THE SEWER FROM BEING LOCATED OUTSIDE THE FOOTPRINT OF THE FACILITY THE SEWER SHALL BE CONSTRUCTED TO WATER MAIN QUALITY STANDARDS, OR IT SHALL BE ENCASED WITH A WATER MAIN QUALITY CARRIER PIPE WITH THE ENDS SEALED.
3. AVOID INSTALLATION ON SLOPES GREATER THAN 3.00%. AVOID COMPACTING NATIVE SOILS. SCARIFY ANY COMPACTED SOIL.
4. GEOTEXTILE FABRIC SHALL MEET REQUIREMENTS OF IUM MATERIAL SPECIFICATION 592, FOR WOVEN: APPARENT OPENING SIZE OF 0.50 MM (TABLE 1, CLASS 1). FOR NON WOVEN: APPARENT OPENING SIZE OF 0.30 MM (TABLE 2, CLASS II).
5. STONE STORAGE OPTIONS ARE IDOT CA-1, CA-3, CA-7, DISTRICT VULCAN MIX, OR APPROVED ALTERNATE. NO RECYCLED MATERIALS.
6. MINIMUM DISTANCE OF 2 FEET (3.5 FEET IN COMBINED SEWER AREAS) BETWEEN BOTTOM OF BMP AND SEASONALLY HIGH GROUNDWATER LEVEL.
7. UNDERDRAINS ARE REQUIRED IN TYPICAL CLAYEY SOILS WHERE INFILTRATION RATES ARE LESS THAN 0.5 INCH/HOUR. NO MORE THAN 1 UNDERDRAIN EVERY 30 FEET ON CENTER. PROVIDE A SOIL REPORT DOCUMENTING NATIVE INFILTRATION RATE TO FOREGO UNDERDRAINS. NO FILTER FABRIC COVER/SOCK.
8. MINIMUM UNDERDRAIN BEDDING OF 2 INCHES, MAXIMUM OF 12 INCHES.
9. MULCH LAYER SHALL BE HARDWOOD MULCH OR OTHER NON-FLOATING GROUND COVER.
10. FOLLOW THE REQUIRED PRETREATMENT MEASURES LISTED ON THE VOLUME CONTROL PRETREATMENT MEASURES DETAIL.

Specifications

HOUSING:
16GI HH high-strength, low-copper, proprietary cast aluminum alloy. 6000-T5 extruded aluminum. Anchor rods are hot dipped galvanized steel. Tenon is 356 HH sand cast aluminum.

FINISH:
A durable polyurethane enamel finish is applied after assembled use shot blasted to create a surface profile which allows for the highest level of paint adhesion. Laboratory tested for superior weatherability and fade resistance in accordance with ASTM B-117-64 and ANSI/ASTM G53-77 specifications. For larger projects where a custom color is required, contact the factory for more information.

WARRANTY:
Please visit **www.signify.com/warranties** for more details on structural and finish warranty.

OUTLET:
Standard Duplex Outlet has universal metal weatherproof cover. Weatherproof while in use. Heavy-duty all-metal construction. Lockable security cover. Meets NEC 406.9 (B). Weather resistant. GFI Duplex Outlet has ground fault function indicator light, universal metal weatherproof cover. Weatherproof while in use. Heavy-duty all-metal construction. Lockable security cover. Meets NEC 406.9 (B). Weather resistant.

HADCO by @ignify | Urban | Hagerstown | TX03 Post top

Project: HERITAGE CROSSING
Location: WESTERN SPRINGS
Qty: 56
Type: TX03
Notes: Qty: 1

Hadco's Hagerstown LED post top gives you the ability to create a unique style through our modular post top concepts to blend into any residential and historic urban settings. With the latest LED technology you can seamlessly replace traditional HID technology to maximize energy savings and significantly reduce total cost of ownership. The Hagerstown luminaire provides excellent uniformity, traditional cosmetics look, with the benefits of modern technology.

1. Configurations with 48 (6A) and 64 (8A) LED array boards are limited to a 25C ambient rating with the 1000mA (1) drive current.
2. Consult factory for availability.
3. Closed Fixtures.
4. Photocontrol receptacle (C,D,J) is only available in compatible with the Twist Lock receptacle (R) photocontrol.
5. "RT" should be on the top of the roof, NOTE: Fitter is required.

TX03 Hagerstown

Post top

Specifications

Roof
Roof (0.090" thick spun aluminum (12"x1/4"x 16"x1/4"). Easy fuse replacement of either roof or bottom globe section if required.

Globe
Narrow body globe is constructed of clear injection-molded vertically ribbed UV stabilized acrylic. Globe is mounted in a cast aluminum wheels gasketing of .1"x1" and an ourabberstrick diameter of 9". Globe (wasnoff) has a 13"x14"x 14"x14"W".

Cage
Cage for narrow body globes (10" dia.) is constructed of die-cast 360 aluminum alloy with hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (10"x14"x 16"x16"W).

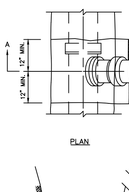
Pods
Wiring block to accept three #8 solid or stranded wires/easy cast aluminum post construction. Pod is secured to the pole with stainless steel set screws (Hex head or Allen head as specified) for mounting to 3" O.D. post tenon. Globe holder has an integral water trap to prevent water from entering fabbed aluminum pole. Globe holder is secured with 5/16-18 black cadmium stainless steel fasteners (Hex head or Allen head as specified). All hardware to be stainless steel captive

Optional Decorative Pods
Octagonal fitter (A) is constructed of die-cast 360 aluminum alloy with bottom-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (10"x14"x 16"x16").

Round fitter with sculpted petals (B)
is constructed of die-cast 360 aluminum alloy with side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (10"x14"x 16"x16").

Fluted tapered hourglass fitter (E)
is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell. (11"x 14"x 19"W).

Smooth tapered hourglass fitter (D)
is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell. (11"x 14"x 19"W).



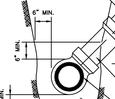
Tapered fluted fitter with sculpted flower petals (E) is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal button eye photocell (10"x14"x 15"x16").

Tall round fluted fitter (G) is constructed of die-cast 360 aluminum alloy with removable door providing entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (14"x 19"W).

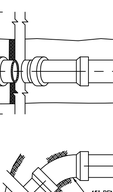
Round contemporary fitter (H) is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal twist-lock photocell receptacle or optional internal button eye photocell. Two easy access to photo eye through top/rear door on pod (10"x14"x 16"W).

Round fluted long fitter (L) is constructed of 356 HH High-Strength, Low-Copper cast aluminum with a side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or button eye photocell. Two easy access to photo eye through the door on the pod (10"x14"x 19"x16"W).

Decorative leaf fitter with sculpted petals (T) is constructed of 356 HH High-Strength, Low-Copper cast aluminum with side-hinged door providing 180 degrees entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (10"x14"x 15"x16").



Tall round fluted fitter (F) is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (14"x 19"W).



Round contemporary fitter (H) is constructed of 356 HH High-Strength, Low-Copper cast aluminum. Optional internal twist-lock photocell receptacle or optional internal button eye photocell. Two easy access to photo eye through top/rear door on pod (10"x14"x 16"W).

Round fluted long fitter (L) is constructed of 356 HH High-Strength, Low-Copper cast aluminum with a side-hinged door providing 180° entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or button eye photocell. Two easy access to photo eye through the door on the pod (10"x14"x 19"x16"W).

Decorative leaf fitter with sculpted petals (T) is constructed of die-cast 360 aluminum alloy with side-hinged door providing 180 degrees entry into the fitter assembly for easy access to the electrical components. Optional internal twist-lock photocell receptacle or optional button eye photocell. Easy access to photo eye through the door on the pod (10"x14"x 15"x16").

Finials
All finials are cast aluminum mounted with 1/4-20 stainless steel threaded studs. Standard finial is Urn ball. Optional finials finish as specified. Finish to Powdercoat customer.

Fasteners
Used to secure post fitter to post tenon and globe to globe holder: Hex Head (1) and Allen Head (3) are 5/16-18 black cadmium stainless steel.

Light Engine
LED grid is composed of five-plain components: Heat Sink, Lens, LED array, Optical System, and Driver. Electrical components are RoHS compliant.

LED Engine
Composed of high-performance white LEDs. Color temperature as per ANSI/NEMA (on - Neutral White, 4000 kelvin nominal (3985K to 4509K) or 3000 kelvin nominal (2926K to 3220K), CRI 70 Min. 75 Typical.

Heat Sink
Made of cast aluminum optimizing the LEDs efficiency and life. Product does not use any cooling device with moving parts (only passive cooling device).

Future Proof Control
R7 - Receptacle with 7 pin enabling dimming and additional functionality (to be determined). Can be used with a twist lock nute or a shorting cap. Will ship with a shorting cap installed for ease of wiring. Remove shorting cap when you're ready to install your node.

Optical System
2: Type 2
3: Type 3
3L: Type 3 with House side shield
3HL: Type 3 with House side shield
3W: Type 3 Wide
3WHL: Type 3 Wide with House side shield
4: Type 4
5: Type 5

Above options are all composed of high performance optical grade PMMA acrylic refractor lenses to achieve desired distribution optimized to get maximum spacing, target lumens and a superior lighting uniformity. Optical system is sealed to IP66 and is mounted to the Light Bar LM-63, LM-76 and TM-16 (6061) certifying its photometric performance. Street side indicated.

TX03 Hagerstown

Post top

Driver
Driver comes standard with 0-10V dimming capability, high power factor of 95%. Electronic driver, operating range 50/60Hz. Auto-adjusting universal voltage input from 120 to 277 VAC (347 to 480 VAC optional). Class P, Class A (connected to neutral, Class), THD of 20% max. Maximum ambient operating temperature from 40°F (4°C) to 130°F (50°C). Certified in compliance to UL1310, cULus requirements (dry and damp locations). Driver is accessible from the top with two-latch disconnect plug resisting to 22°F (105°C). The current supplying the LEDs will be reduced by the driver if the internal driver experiences internal overheating as a protection to the driver and the LED light source components. Output is protected from short circuits, voltage overload and current overload conditions. Driver has a 10kV/10kA surge protection built-in driver surge protection of 2.5kV (min).

Driver Options
SRD: Sensor Ready Driver including SR functionality (but with 24V auxiliary supply and a signal signal input (LS5) connected to the top NEMA twist lock receptacle.
SRDR: Sensor Ready Driver including SR functionality (but with 24V auxiliary supply and a signal signal input (LS5) not connected to the top NEMA twist lock.

DJ: 8 Hrs 75% Reduction
DL: Pre-set driver compatible with the DALI hypenthetic control system

Predicted Lumen Performance Data

Predicted lumen depreciation data*			
Ambient Temperature (°C)	Driver Id	Calculated L(p)hours^	Lumen Maintenance % at 60,000 hours
25°C	up to 1050 mA	>100,000 hrs	>100,000 hrs	92.49%

1. Predicted performance derived from LED manufacturer's lateral exposure to lumen depreciation based on ISSNI LM-80 methodology. Actual exposure may vary due to field application conditions.
2. Calculated per ISSNI TM-21 methodology. Values reported at 25°C ambient.
3. Calculated per ISSNI TM21-11. Published by Illuminating Engineering Society.

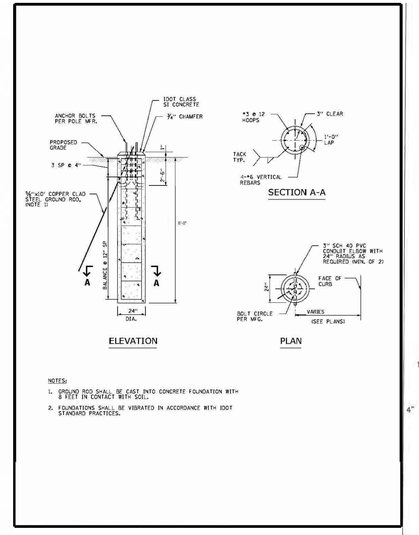
Surge Protection
Surge protector tested in accordance with ANSI/IEEE C62.41 per ANSI/IEEE C62.41.2 Scenario I Category C High Exposure 10kV/10kA waveforms for Line-0-ound, Line-Neutral and Neutral-Ground. Surge protector tested to DOE (US Department of Energy) MSSLC (Municipal Solid State Street Lighting Consortium) solid state lighting (SSL) outdoor luminaire surge and electrical fast transient/burst requirements for High Test Level 3kV / 10kA. Option for SP2 20kV/20kA.

Finish
Color in accordance with the ASMA 2603 standard. Application of polyester powder coating. Super durable TGIC polyester, 2.5 mil minimum of tolerance. The Thermosetting resins provides a discoloration resistant finish, which is suitable for UV exposure. The finish as well as outer retention in keeping with the ASTM D523 standard and humidity proof in accordance with the ASTM D2247 standard. The surface treatment achieves a minimum of 1000 hours salt spray resistance rating in accordance with testing performed and in ASTM B117 standard.

Luminaire Useful Life
The LED light source energy consumption and delivered lumens for each option. Based on ISTMT in situthermal testing in accordance with LM-80 and TM-21 (10,000 hours with 4,752 lumen maintenance @ 25°C). Luminaire useful life accounts for LED lumen maintenance and additional factors, including LED life, driver life, PCB substrate, solder joints and flexpoint cycles and burning hours for normal applications.

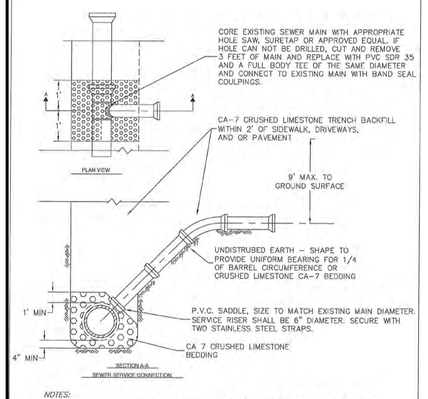
LED product is manufacturing standard
This electronic component is in accordance to the International Electrotechnical Commission standard (IEC) for high existing diodes (LEDs) are assessed in compliance with IEC61340-5-1 and ANSI/ESD S20.20 standards so to eliminate ESD events that could decrease the useful life of the product.

Quality Control
The manufacturer must provide a written statement that is ISO 9001:2008 and ISO 14001:2004 International Quality Standards Certification.



Vibration Resistance
Meets the ANSI C136.31-2001, American National Standard for Roadway Luminaire's Vibration specifications for normal Applications.

Certifications and Compliance
UL listed to Canadian safety standards for luminaires. Luminaire is IP66 rated per IEC60529 Standards. UL8750 and UL1598 compliant. ETL listed to U.S. safety standards for wet locations: cETL listed to Canadian safety standards for wet locations. LM80 & LM79 tested.



IP Rating: The LED optics chamber is IP66 rated. The LED driver is IP66 rated.

Warranty: 5-year extended warranty.

FIRE STROBE 2000

EMERGENCY VEHICLE STROBE DETECTOR

The FIRE STROBE 2000 provides rapid access to automatic gates and secured areas. The FIRE STROBE 2000 opens gates when activated by an emergency vehicle equipped with the standard operational strobe. The most common frequency is (1440).

Now with STROBEWATCH™.

FEATURES:

RAPID DETECTION OF ANY EMERGENCY STROBE

- Fire
- Paramedics
- Police
- 911 Response Vehicles
- Double and Quad Flash Strobes
- 100% Digital

FIELD PROGRAMMABLE

- Coated Optics
- 2 Relay Outputs
- Relay Timing

EASE OF INSTALLATION

- FIRE STROBE 2000 can be installed on any existing gate system
- Sensitive photodiode complete with PVC housing and lens assembly can be mounted in a variety of ways
- FIRE STROBE 2000 is designed to accommodate AC or DC operation
- Units are provided with a 12 VAC plug in transformer

DISTRIBUTED BY:

FIRE STROBE 2000 Technical Specifications

BASIC CONCEPT

The FIRE STROBE 2000 signal is received optically by line of sight. The range varies with the ambient light and intensity of the strobe emitter. A typical range varies from 150 feet to 500 feet. The detector will not allow false operation with unwanted signals from radio interference and/or flashing headlights or loud sounds.

The acquisition time from the emitter light source to the discriminate module is approximately 5 seconds.

The FIRE STROBE 2000 is widely used for security /electric gate access. It can be used for firehouse garage doors and other related access needed by emergency vehicles. This emergency-vehicle strobe detector provides rapid access to any gated community that has been serviced by fire and emergency equipment from the OPTICOM® STROBE SYSTEM.

INSTALLATION & TESTING

Complete installation instructions are provided with the FIRE STROBE 2000 for simple hook-up of the unit to interface with your gate or access control. Two dry contacts are also provided for bi-directional operation where needed.

The photoeye assembly is typically mounted 8 feet to 10 feet above the street level and is aimed for optimal strobe signal. (A total of (2) photoeye assemblies may be used). A 12 VAC power supply is provided with the FIRE STROBE 2000 system.

Testing can be accomplished with the optional fire strobe transmitter tester. This FIRE STROBE 2000 transmitter will enable a throughput of signals from the photoeye assembly to the relay output. This is a hand-held transmitter which operates via 9-volt battery.

TECHNICAL SPECIFICATIONS

1. Frequency 14.035 Hz+/- .25 Hz for class II signals. For OPTICOM® emitters, double, quad flash strobes 140-170 fpm. 100% digital.
2. The FIRE STROBE 2000 is fully compatible with the OPTICOM® priority control emitter.
3. Now with Strobewatch™ programmable for double and quad flash, vehicle mounted strobes. These are usually found on police and other emergency vehicles.
4. The strobe acquisition time is .5 seconds.
5. The PC board construction is mounted in the enclosed 8" x 8" x 4" rain-tight NEMA J-Box.
6. The weight is approximately seven pounds.
7. The power requirements are 12/24 volts AC/DC non-polarity conscious, approximately 1 watt draw.

WARRANTY

The FIRE STROBE 2000 has a one year warranty when used according to the manufacturer's specifications. This warranty does not apply when the FIRE STROBE 2000 has been abused, over voltaged, or altered in any way. The warranty coverage is at the sole discretion of the manufacturer. This unit is to be used only for the operations described above.

*OPTICOM is a trademark of 3M

INSTALLATION

⚠CAUTION

- *To AVOID damaging gas, power or other underground utility lines, contact underground utility locating companies BEFORE digging more than 18 inches (46 cm) deep.*
- ALWAYS wear protective gloves and eye protection when changing the battery or working around the battery compartment.

Installation Tips

Do's

- Weld a horizontal bar across entire gate on any installation for strength. Make sure that the operator is mounted level or it will not function properly.
- Make sure there is slack in the operator cable.
- The operator can be mounted on top of the gate frame.
- The operator must be installed at least 12" (30 cm) from the ground.

Don'ts

- DO NOT install upside-down.
- DO NOT install next to sprinklers or any area that may expose the bottom of operator to water.
- DO NOT install on uphill or downhill gates.
- DO NOT install on ANY pedestrian passageways, doorways, or gates.
- DO NOT over-bend the operator cable. Doing this will cause the wires to eventually break.
- DO NOT weld the crossbar on just a few pickets, or they could bend.

INSTALLATION

Large Metal Control Box

The control box MUST be mounted within 5 feet (1.52 m) of the gate operator. Mount the control box as high as possible for best radio reception. Make sure the control box is level.

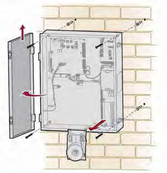
***NOTE:** The Large Metal Solar Control Box (Model XLSOLARCONTUL) does not have the electrical outlets or the expansion board shown in the images.*

Wall or Column Mount

1. Open the control box. The control box door may be removed by opening the door 90°. Lift the door from the hinges and set aside until the installation is complete.
2. Remove the toroid assembly from the control box by loosening the three screws and lifting the assembly up and out.
3. Use knock outs located at the 4 corners of the control box and knock out using a screwdriver and hammer.
4. Secure the control box to mounting surface using the provided screws (4).

Post Mount

***NOTE:** The post mount option is not recommended for the 33AH battery application.*



1. Open the control box. The control box door may be removed by opening the door 90°. Lift the door from the hinges and set aside until the installation is complete.
2. The control box can be mounted to a post with 'U' bolts (refer to chart). The knock out will accommodate a 3/8" diameter 'U' bolt. Select center mounting holes (top and bottom) and knock out using a screwdriver and hammer.
3. Secure the control box to mounting surface with U-bolts and rubber washers (not provided) to ensure a watertight seal.

SPECIAL PROVISION FOR DETECTABLE WARNINGS (SPECIAL)

Effective: *10/01/18* (Modification of IDOT D1 Special Provision for Detectable Warnings (Special) in City of Chicago)
Revised: *4/13/21 (added Galvanized and Stainless Steel material options)*

Description:

Work under this item shall consist of installing cast iron or steel detectable warning tiles as shown on the plans. Work shall be performed according to Section 424 of the Illinois Department of Transportation Standard Specifications for Road and Bridge Construction, except as herein modified.

Materials:

Detectable warning tiles shall be of uniform quality, and free of surface defects. The detectable warnings shall be constructed out of one of the following:
1) Cast iron meeting requirements of ASTM A 48 Class 30 or better.
2) Galvanized steel – 10 gauge, C90 galvanization or better
3) Stainless steel – 10 gauge or better

The dome size and spacing of the detectable warnings shall meet all requirements of sections R305.1.1 and R305.1.2 of PROWAG.

The color of the detectable warning tiles is to be approved by the Engineer unless otherwise specified in the plans and comply with the requirements of section R305.1.3 of PROWAG.

If a concrete border is required for installation of the detectable warnings, it shall comply with section R305.2 of PROWAG.

Responsibility of the Contractor:

The contractor shall verify all dimensions with the product manufacturer. If using radial units, the contractor shall verify that the radius of the detectable warnings supplied by the manufacturer matches that of the curb radius.

The contractor shall ensure that the supplied detectable warnings allow placement of the rows of domes that are aligned parallel with the path of travel. Where detectable warnings are radial, dome orientation is not significant.

The contractor shall ensure a maximum vertical transition of ¼" between the edge of the detectable warnings and adjacent concrete.

Measurement and Payment:

This work will be paid for at the contract unit price per square foot for DETECTABLE WARNINGS (SPECIAL).

THE OWNER OF HERITAGE CROSSING SUBDIVISION, MCNAUGHTON DEVELOPMENT, LLC. WITH FACILITIES AS SHOWN ON THIS EXHIBIT (EXHIBIT R), SHALL ASSUME RESPONSIBILITY FOR THE FOLLOWING MAINTENANCE ACTIVITIES, UNTIL SUCH TIME WHERE CERTAIN REQUIREMENTS ARE MET. STORM WATER RETENTION AND DETENTION FACILITIES SHALL BE OWNED AND MAINTAINED BY THE HOMEOWNERS ASSOCIATION (H.O.A.)

GRAPHIC SCALE
30 0 15 30
(IN FEET)
1 inch = 30 ft.

1. General
Regular inspections and routine maintenance of general areas shall be performed on a monthly or as-needed basis. Specific items of concern include:
- X Litter and debris shall be controlled
- X Landscaped areas shall be maintained with regular mowing and restored with appropriate seeding/vegetation as necessary
- X Accumulated sediment shall be disposed of properly, along with any wastes generated during maintenance operations
- X Riprap areas shall be repaired with the addition of new riprap, as necessary, of similar size and shape
- X Roads shall be swept, vacuumed and/or washed on a regular basis

2. Stormwater Management Facilities
All components of the stormwater management facilities shall be checked monthly between March and November and maintained as necessary to ensure proper performance. It is critical that all inflows and outflows to the detention facility are clean and performing as designed. In addition, the design volume of the detention facility shall also be maintained. Inspections for the following specific items should be conducted monthly between March and November:

Side Slopes/Embankment/Emergency Overflow Structure
- X Inspect embankments for settlement and erosion
- X Remove woody growth from the embankment
- X Any breaks, hire Registered Professional Engineer for design resolution
- X Seed and sod any eroded areas
- X Signs of piping (leakage) or seepage, repair
- ___ Stabilize emergency overflow structure if erosion observed
- ___ Remove obstructions blocking emergency overflow spillway

Vegetated Areas
- X Regular mowing to control vegetation, no cutting of native vegetation
- X Need for planting, reseeding or sodding. Supplement alternative native vegetation if a significant portion has not established (50% of the surface area). Reseed with alternative grass species if original grass cover has not successfully established.
- X Evidence of grazing, motorbikes or other vehicles, repair
- X Check for invasive vegetation, remove where possible
- X All vegetation must be maintained per the approved planting plan

Outlet Control Structure
- ___ Inspect restrictor and remove debris if clogged or discharge reduced
- ___ Remove accumulated sediment at outlet
- ___ Scour and erosion at outlet, repair and reseed
- ___ Any ice damage to outlet of pipe, repair if necessary
- ___ Condition of trash tracks, remove debris
- ___ Outlet channel conditions downstream

Access for Maintenance Equipment
- X Remove any obstructions placed in maintenance easements

Safety Features
- ___ Access controls to hazardous areas
- X Fences
- X Loose or damaged posts
- X Loose or broken wires
- X Condition of gates
- X Signs

Detention Volume
- X Inspect all stormwater detention facilities to ensure that the constructed volume for detention is maintained. No sediment, topsoil, or other dumping into the facility shall be allowed. Specific locations in the stormwater management system, designed to accumulate sediment, shall be dredged as necessary to prevent sediment from reaching the invert of any gravity outlet pipe.

3. Volume Control Facility
Routine inspections and maintenance of volume control facilities shall be performed by the Owner on a yearly or as-needed basis. Specific items of concern include:
- ___ Facility shall be inspected yearly using the monitoring well to verify the system is functioning properly.
- ___ Surface of permeable pavement shall be cleaned with low-pressure power washer.
- X Accumulated sediment from surface shall be vacuumed out and disposed of properly.
- X Appropriate signage shall be repaired if damaged or illegible.

4. Stormwater Collection System
The Owner shall perform monthly inspections of all components of the stormwater collection system. The monthly inspection shall occur between March and November and include the following specific areas of concern:

Storm Inlets/Manholes
- X Remove accumulated leaves and other debris from grates
- X Reset covers/lids on as-needed basis
- X Remove accumulated sediment from manhole bottom when 50% of sump is filled

Storm Sewers/Culverts
- X Visually inspect pipes by removing manhole lids, make repairs as necessary
- X Storm sewers and culverts shall be checked for siltation deposits at inlets, outlets, and within the conduit, clean out as necessary
- X Restore riprap at outfalls if erosion observed
- X Restore riprap at outfalls
- X Replant and reseed any eroded areas

Overland Flow Routes (Ditches/Swales)
- X Annual visual inspections shall be performed that verify the design capacity of the overland flow routes is maintained. The slope and cross-sectional area of the ditch/swale shall be verified during this inspection.
- X Remove any obstructions that have been placed in the drainage path
- X Seed and sod any eroded areas
- X Restore riprap as necessary
- X Regrade to provide positive drainage as necessary
- X Regular mowing to control vegetation

5. Vegetated Areas
- X Need for planting, reseeding, or sodding. Supplement alternative native vegetation if a significant portion has not established (50% of the surface area after second growing season). Reseed with alternative native grass species if original grass cover has not successfully established.
- X Evidence of grazing, motorbikes, or other vehicles, repair.
- X Check for invasive vegetation, remove when possible.
- X Regular mowing to control vegetation; it is recommended that native vegetation remain uncut.
- X Dead or damaged non-native grassy areas – repair with seeding with fertilization or seeding with mulch.
- ___ Compensatory storage area shall be reseeded with appropriate vegetation according to the approved planting plan.

6. Qualified Sewer Construction
- X Perform manhole inspections once every five years, make repairs as necessary.
- X Perform sewer inspections once every five years, make repairs as necessary.
- X Perform regular cleaning so that each sewer segment is cleaned once every 5 years.
- X Remove any obstructions placed in maintenance easements that may impede maintenance equipment access.

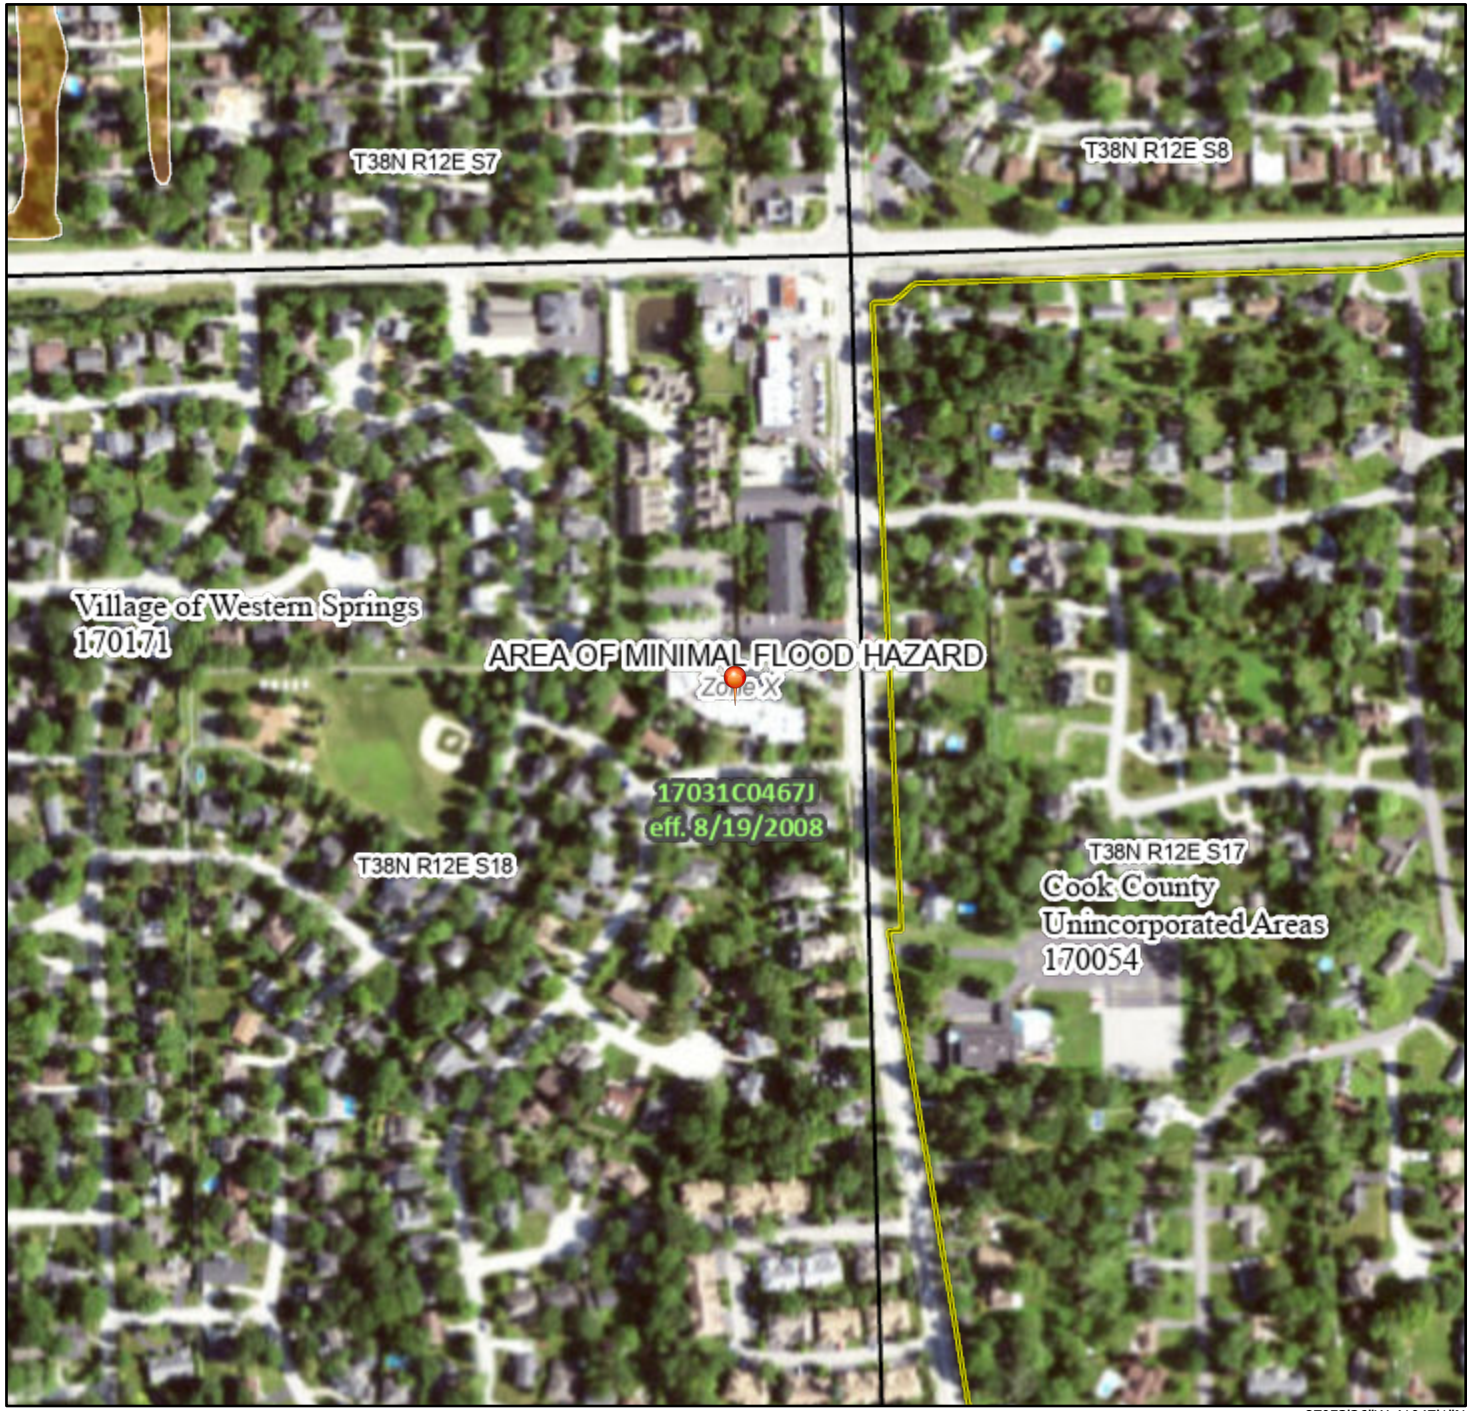
SUMMARY

The Heritage Crossing re-development is approximately 2.41 gross acres with the current use being professional office buildings and associated parking lot areas. An existing stormwater detention basin is located adjacent to the site in a 0.34-acre parcel dedicated as Lawn Avenue. The proposed re-development consists of twenty-nine residential single family attached units with related roadway, utilities, and a stormwater management area. The existing stormwater management facility (South Detention Pond) owned by the Village of Western Springs and maintained by the Heritage Springs HOA will be enhanced to provide the MWRD required volume control elements and will include increased stormwater storage volume to provide additional detention to attenuate more of the off-site upstream stormwater run-off prior to being released downstream. The FEMA FIRM map 17031CO467J effective 8/19/2008 indicates that there are no special flood hazard areas (floodplain) on the subject property (Zone "X"). The intent of this report is to convey the existing site conditions along with the final planning development and calculations that have been completed to support Final Engineering.

The existing site is not located in the FEMA mapped floodplain. Evidence has shown that the existing site and the Heritage Springs subdivision experience flooding during large storm events. DesignTek Engineering was contracted to complete a detailed flood analysis for the detention system maintained by the Heritage Springs HOA. An off-site area of approximately172.3 acres, to the east of Wolf Road was determined to be tributary to the subject site via an existing 4'x6' concrete box culvert that crosses under Wolf Road. The upstream off-site area is developed, and the area was divided into two sub-areas. They were delineated as Ashbrook Subdivision and LaGrange Highlands offsite with areas 42.90 acres and 129.40 acres, respectively. Time of concentrations and curve numbers were calculated for each area. MWRD permit number 99-0525 was obtained for the Ashbrook Subdivision. This information was used in HEC HMS computer modeling software to analyze the system and determine a 100-year critical duration peak flowrate of 359.61 cfs. This occurs during the 1-hour event. The high-water level (HWL) for the existing detention basin (basin C) was determined to be 655.16.

To allow for the required Cook County DOTH site distance requirements the existing box culvert under Wolf Road will be extended 66 feet away from the proposed Heritage Court intersection. A bypass system will be constructed to collect and convey the peak discharge through a proposed 4'x6' concrete box culvert. The box culvert matches the upstream condition. The calculated peak HWL was determined to be 655.11 for the proposed condition. This is a reduction of 0.05'. The site will be inundated with water at the north end of Heritage Court, near the property line. Under existing conditions this area was also inundated with water. The proposed condition will have no significant impacts when compared to existing conditions. An interim swale will be constructed on site to convey the discharge during rainfall events during the construction of the bypass system. The swale was designed to carry the peak discharge.



The existing condition (professional office buildings) has a total impervious area of 1.67 acres with the proposed re-development (residential) consisting of 1.50 acres equating to a total reduction in impervious area of 0.17 acres or 10%. Utilizing the proposed impervious area within the re-development site, the required MWRD volume control storage has been calculated to be 0.13 ac-ft. This volume is proposed as surface storage (elevations 647.0 – 648.0) below the NWL in the stormwater management pond and has a proposed volume of 0.15 ac-ft. A PVC underdrain is proposed below the volume control area. Recent soil investigation for the existing south detention pond revealed that the Estimated Seasonal High Groundwater Table (ESHGWT) is at

elevation 644.0, 3’ feet below the proposed pond bottom. See enclosed Soil Investigation Report within the appendix section of this report for reference.

The previously issued MWRD permit (99-228) for the original development was obtained and is included in the appendix for reference. Upon examination the detention review sheet within the permit does not depict any detention volume requirements for the original development. Although the as-built plan dated (09-29-2007) for the original development depicts the volume provided for the subject “South Detention Pond” as 0.729 Ac-Ft. and based on the recent topographic survey for the proposed re-development we have calculated the South Detention Pond storage volume to currently be 0.76 Ac-Ft. which appears to match the original intent. Initial conversations with Village staff revealed that even though the re-development has a decrease in impervious area they have experienced stormwater flooding issues off-site and further downstream within the same tributary of the subject site and expansion of the existing stormwater facility, if possible, would be a regional benefit. Taking this into account the proposed re-development will include an expansion of the South Detention Pond volume to 1.64 Ac-Ft increasing the storage volume by 0.85 Ac-Ft which essentially doubles the volume. The 100-year peak flowrate for the development site will also be reduced to 13.96 cfs from the existing condition of 15.64 cfs (+/- 11% reduction). The proposed residential buildings also will not have basements and therefore no sump pump discharges will be tributary to the stormwater management area.

Custom Soil Resource Report for Cook County, Illinois

Heritage Crossing

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Cook County, Illinois
Survey Area Data: Version 17, Aug 28, 2023

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 13, 2020—Jul 6, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however,

onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Cook County, Illinois

854B—Markham-Ashkum-Beecher complex, 1 to 6 percent slopes

Map Unit Setting

National map unit symbol: 28shj
Elevation: 510 to 930 feet
Mean annual precipitation: 28 to 40 inches
Mean annual air temperature: 45 to 52 degrees F
Frost-free period: 140 to 180 days
Farmland classification: Not prime farmland

Map Unit Composition

Markham and similar soils: 40 percent
Ashkum and similar soils: 30 percent
Beecher and similar soils: 25 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Markham

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Summit, backslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Thin mantle of loess or other silty material and in the underlying till

Typical profile

H1 - 0 to 8 inches: silt loam
H2 - 8 to 21 inches: silty clay loam
H3 - 21 to 32 inches: silty clay loam
H4 - 32 to 60 inches: silty clay loam

Properties and qualities

Slope: 1 to 6 percent
Depth to restrictive feature: 20 to 55 inches to densic material
Drainage class: Moderately well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 24 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 30 percent
Available water supply, 0 to 60 inches: Low (about 5.1 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Ecological site: R110XY010IL - Moist Glacial Drift Upland Savanna
Hydric soil rating: No

Description of Ashkum

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Concave
Parent material: Colluvium and in the underlying till

Typical profile

H1 - 0 to 12 inches: silty clay loam
H2 - 12 to 29 inches: silty clay
H3 - 29 to 54 inches: silty clay loam
H4 - 54 to 60 inches: silty clay loam

Properties and qualities

Slope: 1 to 2 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Calcium carbonate, maximum content: 25 percent
Available water supply, 0 to 60 inches: High (about 9.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C/D
Ecological site: R110XY008IL - Wet Glacial Drift Upland Prairie
Hydric soil rating: Yes

Description of Beecher

Setting

Landform: End moraines, ground moraines
Landform position (two-dimensional): Backslope, footslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Thin mantle of loess or other silty material and in the underlying till

Typical profile

H1 - 0 to 7 inches: silt loam
H2 - 7 to 24 inches: silty clay loam
H3 - 24 to 36 inches: silty clay loam
H4 - 36 to 60 inches: silty clay loam

Properties and qualities

Slope: 2 to 4 percent
Depth to restrictive feature: 24 to 45 inches to densic material
Drainage class: Somewhat poorly drained

Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Calcium carbonate, maximum content: 35 percent
Available water supply, 0 to 60 inches: Low (about 5.4 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C/D
Ecological site: R110XY010IL - Moist Glacial Drift Upland Savanna
Hydric soil rating: No

Minor Components

Orthents, clayey

Percent of map unit: 5 percent
Landform: Lake plains, ground moraines
Landform position (two-dimensional): Summit, backslope
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Ecological site: F095XB010WI - Loamy and Clayey Upland
Hydric soil rating: No

Soil Investigation Report
5600 S. Wolf Road
Western Springs, IL

AET Project Number: Geo – 9951

Gentleman / Madam,

Associated Engineering & Technology, Inc. (AE&T) has completed two (2) soil borings and sampling of soils to determine the Estimated Seasonal High Groundwater Level (ESHGWL) at the above referenced site in Western Springs, IL. The borings were done at the existing detention pond area and the locations are shown in the appendix of this report. The soil samples were analyzed in the laboratory for soil description, visual classification and moisture content by a geotechnical engineer. Munsell Chart and FEMA maps were also used to estimate the seasonal high groundwater elevations. Based upon our investigation the ESHGWL was noted to be at six (6) feet below the bottom of existing pond.

If you have any questions regarding this report, please contact us.

Sincerely,
Associated Engineering & Technology, Inc.

Ashok Medhi, M.S.
Geotechnical Engineer

Toby C. Mickey, P.E.
Senior Engineer

1.0 SOIL BORING

A total of two (2) soil borings were done were done at the proposed development to 10 feet depth each in accordance with American Society for Testing and Materials procedure for Standard Penetration Test and Split Barrel Sampling of Soils (ASTM 1586). The borings were done with a CME 45 drill rig mounted on All-Terrain Vehicle.

The soil samples were collected at 2-1/2 feet interval to a depth of 10 feet and thereafter at 5 feet interval. The boreholes were backfilled with auger cuttings after completion of drilling.

The soil samples were placed in glass containers and brought to our laboratory. A site plan showing the approximate soil boring locations is included in appendix. Log of the soil borings along with lab classifications are included in Appendix B.

2.0 LABORATORY TESTING

All samples were visually classified according to the Unified Soil Classification System (ASTM D-2488) by a geotechnical engineer. The Auger boring samples are disturbed and were generally used for classification testing (D2487, D2488), moisture content and pocket penetrometer test (ASTM D 854) to evaluate unconfined compressive strength for clayey and clayey silt soils. The primary purpose of this investigation was to determine the Estimated Seasonal High Groundwater Elevation. The boring logs with soil description are included in the Appendix.

3.0 SOIL DESCRIPTION & ANALYSIS

The sub-surface materials in the borings (B-1 & B-2) comprised 8 to 10 inches of black topsoil with roots.

It was underlain by very stiff to hard moist **brown silty Clay** with fine sand and gravel (CL) to depths of about 6.0 feet. Beneath it, medium dense moist **brownish gray fine to medium Sand** trace small gravel (SP) was noted to depths of 8 feet and changed color to **gray** Fine Sand trace small gravel (SP) to the boring depths of 10 feet.

Groundwater was **not** encountered during and after completion of the borings.

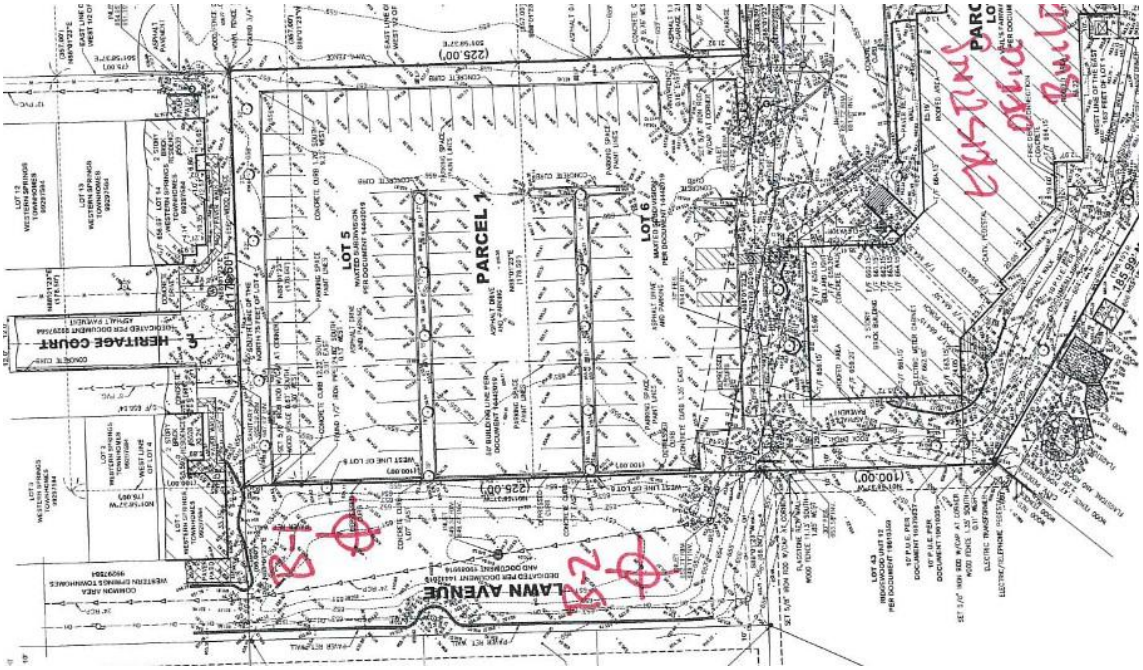
3.1 Estimated Seasonal High Ground Water Level

The Estimated seasonal high groundwater level (ESHGWL) at Borings B-1 and B-2 located at existing Detention Pond is at about (six) 6 feet. It is based upon visual classification of the soil samples, existing groundwater levels, site topography, soil conditions, color description and change of color from brown to brownish gray at 6 feet, FIRM maps and Munsell chart (10 YR**).**

Note: Soil colors are expressed in terms of hue, value, and chroma, in accordance with the standardized Munsell color system (Soil Survey Staff, 1951). Hue refers to the wavelength, value expresses the degree of lightness or darkness, whereas chroma notes the purity or strength of a particular color (Munsell, 1974). This system is used to describe the matrix or dominant soil color and the blotches of less-prevalent colors commonly called mottles.

Soil colors are commonly associated with the presence or absence of iron. Weathering of soil minerals is a slow process but with time causes the release of mineral constituents to the environment. Soluble weathering-products are removed from the soil profile, while more stable compounds will precipitate. Iron (Fe), released from a mineral, frequently coats soil particles with thin oxide-coatings. Well-aerated soils typically are yellowish brown-colored from these iron-oxide coatings. Depending on the intensity of the weathering cycles, the iron-oxides may display different colors.

5.0 Warranty / Limitations of liability



Associated Engineering & Technology, Inc. understands that the Boring log depicts conditions disclosed at the particular location and date indicated and may vary within 5 feet of vertical and lateral distance from the borings.
If significant variations or changes are in evidence during construction, it may then be necessary to re-evaluate the recommendations of this report.
In no event shall Associated Engineering & Technology, Inc. be liable for any indirect, special, consequential or incidental damages, of any kind or nature however caused and based on any theory of liability, arising out of or relating to this report, whether or not such party has been advised of the possibility of such damages.

MUNSELL SOIL COLOR CHART

Soil colors are expressed in terms of hue, value, and chroma, in accordance with the standardized Munsell color system (Soil Survey Staff, 1951). Hue refers to the wavelength, value expresses the degree of lightness or darkness, whereas chroma notes the purity or strength of a particular color (Munsell, 1974). This system is used to describe the matrix or dominant soil color and the blotches of less-prevalent colors commonly called mottles. Soil colors are commonly associated with the presence or absence of iron. Weathering of soil minerals is a slow process but with time causes the release of mineral constituents to the environment. Soluble weathering-products are removed from the soil profile, while more stable compounds will precipitate. Iron (Fe), released from a mineral, frequently coats soil particles with thin oxide-coatings. Well-aerated soils typically are yellowish brown-colored from these iron-oxide coatings. Depending on the intensity of the weathering cycles, the iron-oxides may display different colors.

GENERAL NOTES

In order to provide uniformity throughout our project, the following system has Been adopted to describe each soil sample. Rock Shale and other materials will be described in detail as encountered.

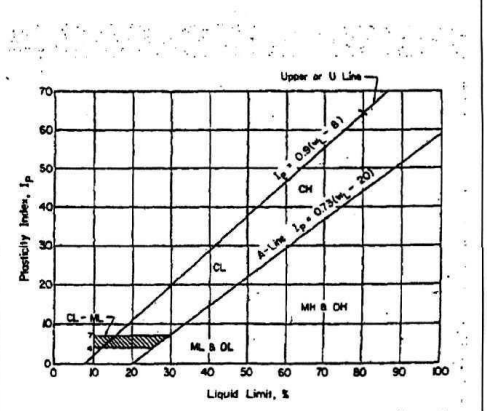
CONSISTENCY OF COHESIVE SOIL		RELATIVE DENSTY OF GRANULAR SOIL	
UNCONFINED COMPRESSIVE STRENGTH **QU(TSF)**	**CONSISTENCY**	**"N" VALUE (Blows/foot)**	**RELATIVE DENSITY**
<0.25	VERY SOFT	0 – 3	VERY LOOSE
0.26 – 0.49	SOFT	4 – 9	LOOSE
0.50 – 0.99	MEDIUM STIFF	10 – 29	MEDIUM DENSE
1.00 – 1.99	STIFF	30 – 49	DENSE
2.00 – 3.99	VERY STIFF	50 – 80	VERY DENSE
4.00 – 8.00	HARD	>80	EXTREMELY DENSE
> 8	VERY HARD		

- **Number of blows per foot required to drive a 2" O.D. split-spoon sampler using a140lb. Weight falling free for 30 inches, except where otherwise noted.**

COLOR AS DETERMINED ON THE FRESH, MOST SAMPLES

PREDOMINATE COLORS		SHADES	MODIFYING ADJECTIVE
Black	Yellow	Light	Vari-colored
Brown	Red	Dark	Streaked
Gray	Blue		Mottled

GRADATION DESCRIPTION AND TERMINOLOGY



COMPONENTS	SIZE RANGE
BOULDER	OVER 8 INCHES
COBBLE	8 INCHES TO 30 INCHES
GRAVEL	3 INCHES TO #4 SIEVE (4.75 mm)
SAND	#4 SIEVE TO #200 SIEVE (0.075 mm)
SILT	PASSING # 200 SIEVE (0.075 mm)
CLAY	SMALLER THAN 0.005 mm.

DESCRIPTION OF COMPONENT ALSO PRESENT IN SAMPLE	PERCENT OF DRY WEIGHT
TRACE	1 – 9
LITTLE	10 –19
SOME	20 - 34
AND	35 - 50

GROUND WATER LEVEL

Water levels are those observed when boring were made, or as noted. Porosity of soil strata, variation of rainfall, Site topographic, ect., may cause changes on these levels.

SECTION 1

Storm Water Management Summary

Storm Water Management Summary

Existing Conditions:

The subject 37.9 acre property is located along the east side of Wolf Road between 60th and 63rd Streets in Indian Head Park, Illinois (refer to the location map included in this section). The site is lightly wooded and currently consists of a par three golf course with a small clubhouse building and gravel parking lot. It is bounded by single family homes to the west, north and east and the Acacia multi-family development along its entire southern border. Except for approximately one half acre in the southeast corner of the property, the parcel drains unrestricted in a northerly direction to a pair of 12" diameter storm sewer pipes at the north boundary which in turn discharge to an existing 24" x 18" corrugated metal pipe under 60th street. This culvert then conveys storm water to a drainage swale which flows northerly to Plainfield Road.

There are approximately 6.2 acres of tributary watershed to the west and south of the site (refer to the USGS map copies in section 3). This upstream area is comprised of three separate drainage areas. The first two are approximately 3.4 and 1.3 acres in size and drain to the property through separate 18" diameter culverts under Wolf Road. The third off-site area consists of an estimated 1.5 acres of rear yards of the adjacent Acacia development along the south boundary of the property. Record drawings for the Acacia development indicate that the majority of that site now drains to the southeast and away from the proposed Ashbrook Subdivision.

Proposed Development Conditions:

The proposed Ashbrook Subdivision will occupy 36.4 acres of the 37.9 gross acreage, with 1.5 acres being dedicated to the Wolf Road right-of-way. The development will consist of 25 multi-family buildings containing a total of 112 townhome units and 54 single family home sites. Wolf Road will be widened to provide a left turn lane into the site.

A proposed storm sewer system and drainage swales will convey storm water to three on-site storm water retention ponds which will provide the necessary detention storage in the event of a 100-year frequency storm event. The high water level on each of the three retention ponds has been designed at a minimum of 1.5 feet below the lowest adjacent proposed foundation elevation. Each pond will contain an overflow weir to accommodate the appropriate off-site 100-year bypass flow without exceeding a flow depth of 0.5 feet. The discharge from each pond will be restricted by a circular orifice cut into a metal plate permanently mounted (in accordance with MWRD regulations) over the outflow pipe inside of a downstream catch basin. The site release has been reduced beyond typical allowable rates so that only one of the two existing downstream 12" diameter storm sewer pipes will be needed to convey it. Finally, the existing 24" x 18" culvert under 60th Street, which is in poor condition, will be replaced with a brand new pipe of the same material and size.

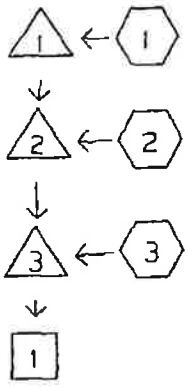
Storm Water Management Calculations:

HydroCAD storm water modeling software, which employs the SCS TR-20 and TR-55 methods, was utilized along with Bulletin 70 rainfall intensities in determining the 100-year storm runoff hydrographs for the site and routing the resultant flows through the proposed retention ponds. Section 2 includes all data calculated for basin characteristics, times of concentration, runoff hydrographs, detention storage, and pond routing. The off-site bypass flows were calculated using the rational method and Bulletin 70 rainfall intensities and are shown in Section 3. Storm sewers on the site have been designed, utilizing the rational method and the Bulletin 70 rainfall data to convey a 10-year frequency storm flow. The calculations for these are in Section 4. Supporting technical reference data can be found in Section 5.

The primary calculated hydrologic information is as follows:

POND	TRIBUTARY BASIN AREA (Ac)	N.W.L. ELEV.	H.W.L. ELEV.	STORAGE VOLUME (Ac-Ft)	RESTRICTOR ORIFICE DIAMETER (in)	MAX.100-YR STORM RELEASE (cfs)
1	17.57	694.5	701.0	5.1	10.0	4.2
2	11.02	691.5	698.0	5.2	9.0	3.5
3	8.07	688.5	695.0	4.5	5.7	2.2

Total Development Area = 36.4 Ac



Total Proposed Detention Volume = 14.8 Ac-Ft

Proposed Site Release = 2.2 cfs (0.06 cfs/Ac)

CALCULATED BY TML DATE 9/30/95
CHECKED BY DATE
SCALE

SITE BYPASS FLOW

1. OFF-SITE AREA A ≈ 3.4 Ac ON WEST SIDE OF WOLF RD. (SEE ATTACHED USGS MAP'S)

ASSUME T_c = 20 MIN & C = 0.60

Q_{100} = C · I · A = 0.60 × 6.9"/HR × 3.4 ≈ 14.1 cfs

2. OFF-SITE AREA B ≈ 1.3 Ac ON WEST SIDE OF WOLF ROAD (SEE ATTACHED USGS MAPS)

ASSUME T_c = 20 min & C = 0.60

Q_{100} = 0.60 × 6.9"/HR × 1.3 ≈ 5.4 cfs

3. OFF-SITE AREA C ≈ 1.5 Ac ALONG ACACIA DEVELOPMENT TO SOUTH (BASED ON 1275' × 50' AVG BACK YARD AREA. REMAINING PORTION OF ACACIA DRAINS TO SOUTH PER SITE RECORD DRAWINGS.)

ASSUME T_c = 10 min & C = 0.50

Q_{100} = 0.50 × 10.02"/HR × 1.5 ≈ 7.5 cfs

∴ BYPASS FLOW THROUGH POND #1 = 5.4 + 7.5
= 12.9 cfs

BYPASS FLOW THROUGH POND #'S 2 & 3 = TOTAL BYPASS FLOW
= 27.0 cfs

	664.30	85.97	83.45	244.76	414.18
	664.40	86.75	87.73	256.71	431.19
	664.50	87.52	92.08	268.12	447.72

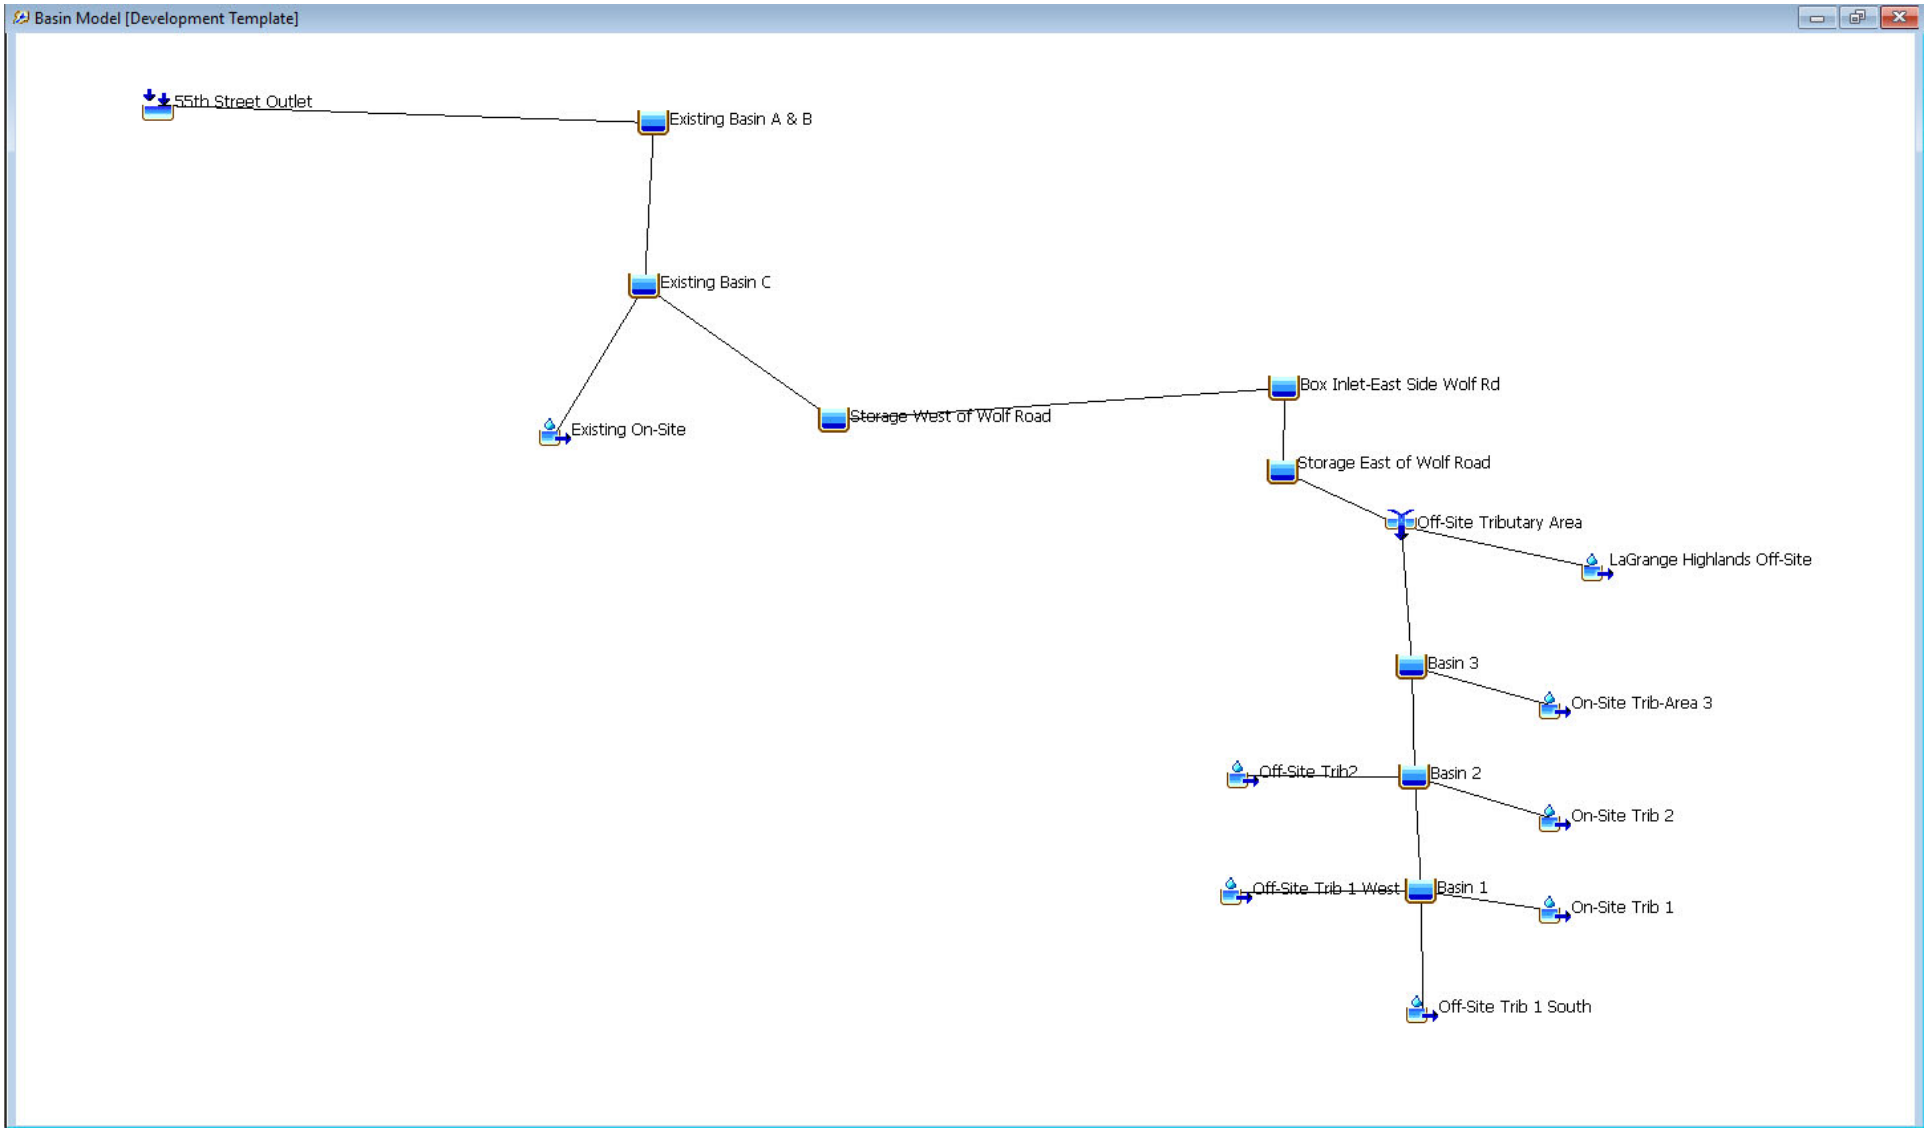
1) Bottom Orifice Flow

C = 0.80
Rectangular Orifice 2.0' x 2.85'
Area = 5.71 feet

Centerline of Orifice = 658.80

2) Rectangular Weir

Weir Flow



C = 2.700
Length = 6.1
Elevation = 661.35

3) Inlet Box Structure

10'x5' Grate

Water Elevation (feet)	Head (feet)	Weir Flow (cfs)	Orfice Flow (cfs)
663.30	0.00	0.00	
663.40	0.10	1.90	
663.50	0.20	5.37	
663.60	0.30	9.86	
663.70	0.40	15.18	
663.80	0.50	21.21	
663.90	0.60		189.59
664.00	0.70		204.78
664.10	0.80		218.92
664.20	0.90		232.20
664.30	1.00		244.76
664.40	1.10		256.71
664.50	1.20		268.12

Weir Formula	Orfice Formula
Q = CLH^3/2	Q = AC √64.4(H)
Q = (3)(20)H^3/2	Q = (50)(0.61) √64.4(H)
Q = (60)H^3/2	Q = (30.5) √64.4(H)

Proposed Conditions

Curve Number

Project: Heritage Crossing By: AJS Date: 8/26/2024

Location: NE Corner of Wolf Road and Park Place Chkd: SDS Date: 8/26/2024

Conditions (i.e. Present / Developed): Proposed

Curve Number

Soil Name and Hydrologic Group (Appendix A)	Cover Description (cover type, treatment, and hydrologic condition; percent impervious; unconnected/connected impervious area ratio)	CN			Area ☑ acres ☐ mi² ☐ %	Product of CN x Area
C	Lawn, good condition (grass cover > 75%)	74			1.0008	74.06
C	Pavement, Parking, Curb and Gutter	98			0.3374	33.07
C	Carriage Walk	98			0.0644	6.31
C	Driveways	98			0.2829	27.72
C	Stoops & Patios	98			0.0681	6.67
C	Buildings	98			0.6564	64.33
				Totals =	2.4100	212.16

* Use only one CN source per line.

CN (weighted) = $\frac{\text{total product}}{\text{total area}} = \frac{212.16}{2.4100} = 88.03$; use CN = **88.03**
